

# THE DIARY OF JOHN EVELYN

EDITED FROM THE ORIGINAL MSS BY

WILLIAM BRAY

Fellow of the Antiquarian Society

IN TWO VOLUMES

VOL. I

WITH A BIOGRAPHICAL INTRODUCTION  
BY THE EDITOR

AND A SPECIAL INTRODUCTION BY  
RICHARD GARNETT, LL.D.  
Of the British Museum

M. WALTER DUNN, PUBLISHER  
WASHINGTON & LONDON

## ILLUSTRATIONS

---

### VOLUME I.

- OLIVER CROMWELL DICTATING TO JOHN MILTON . . . . . *Frontispiece*  
The letter to the Duke of Savoy to stop the persecution of the Protestants of Piedmont, 1655. (See p. 284.)  
Photogravure from an engraving by Sartain after Newenham.
- LORD CHARLES RUSSELL TAKING LEAVE OF HIS CHILDREN, 1683. 180  
Photogravure after a painting by Bridges.
- CHARLES I. IN PRISON . . . . . 244  
Photogravure after De La Roche.

---

### VOLUME II.

- NELL GWYNNE (See p. 63.) . . . . . *Frontispiece*  
Photogravure after Sir Peter Lely.
- THE DUKE OF BUCKINGHAM . . . . . 44  
Photogravure from an old painting.

## EVELYN'S DIARY

---

THE two chief diarists of the age of Charles the Second are, *mutatis mutandis*, not ill characterized by the remark of a wicked wit upon the brothers Austin. "John Austin," it was said, "served God and died poor: Charles Austin served the devil, and died rich. Both were clever fellows. Charles was much the cleverer of the two." Thus John Evelyn and Samuel Pepys, the former a perfect model of decorum, the latter a grievous example of indecorum, have respectively left us diaries, of which the indecorous is to the decorous as a zoölogical garden is to a museum: while the disparity between the testamentary bequests of the two Austins but imperfectly represents the reputation standing to Pepys's account with posterity in comparison with that accruing to his sedate and dignified contemporary.

Museums, nevertheless, have their uses, and Evelyn's comparatively jejune record has laid us under no small obligation. But for Pepys's amazing indiscretion and garrulity, qualities of which one cannot have too little in life, or too much in the record of it, Evelyn would have been esteemed the first diarist of his age. Unable for want of these qualifications to draw any adequate picture of the stirring life around him, he has executed at least one portrait admirably, his own. The likeness is, moreover, valuable, as there is every reason to suppose it typical, and representative of a very important class of society, the well-bred and well-conducted section of the untitled aristocracy of England. We may well believe that these men were not only the salt but the substance of their order. There was an ill-bred section exclusively devoted to festivity and sport. There was an ill-conducted section, plunged into the dissipations of court life. But the majority were men like Evelyn: not, perhaps, equally refined by culture and travel, or equally interested in literary research and scientific experiment, but well informed and polite; no strangers to the Court, yet hardly

to be called courtiers, and preferring country to town; loyal to Church and King but not fanatical or rancorous; as yet but slightly imbued with the principles of civil and religious liberty, yet adverse to carry the dogma of divine right further than the right of succession; fortunate in having survived all ideas of serfdom or vassalage, and in having few private interests not fairly reconcilable with the general good. Evelyn was made to be the spokesman of such a class, and, meaning to speak only for himself, he delivers its mind concerning the Commonwealth and the Restoration, the conduct of the later Stuart Kings and the Revolution.

Evelyn's Diary practically begins where many think he had no business to be diarising, beyond the seas. The position of a loyalist who solaces himself in Italy while his King is fighting for his crown certainly requires explanation: it may be sufficient apology for Evelyn that without the family estates he could be of no great service to the King, and that these, lying near London, were actually in the grasp of the Parliament. He was also but one of a large family and it was doubtless convenient that one member should be out of harm's way. His three years' absence (1643-6) has certainly proved advantageous to posterity. Evelyn is, indeed, a mere sight-seer, but this renders his tour a precise record of the objects which the sight-seer of the seventeenth century was expected to note, and a mirror not only of the taste but of the feeling of the time. There is no cult of anything, but there is curiosity about everything; there is no perception of the sentiment of a landscape, but real enjoyment of the landscape itself; antiquity is not unappreciated, but modern works impart more real pleasure. Of the philosophical reflections which afterward rose to the mind of Gibbon there is hardly a vestige, and of course Evelyn is at an immeasurable distance from Byron and De Staël. But he gives us exactly what we want, the actual attitude of a cultivated young Englishman in presence of classic and renaissance art with its background of Southern nature. We may register without undue self-complacency a great development of the modern world in the æsthetical region of the intellect, which implies many other kinds of progress. It is interesting to compare with Evelyn's nar-

rative the chapters recording the visit to Italy supposed to have been made at this very period by John Inglesant, who inevitably sees with the eyes of the nineteenth century. Evelyn's casual remarks on foreign manners and institutions display good sense, without extraordinary insight; in description he is frequently observant and graphic, as in his account of the galley slaves, and of Venetian female costumes. He naturally regards Alpine scenery as "melancholy and troublesome."

Returned to England, Evelyn strictly follows the line of the average English country gentleman, execrating the execution of Charles I., disgusted beyond measure with the suppression of the Church of England service, but submissive to the powers that be until there are evident indications of a change, which he promotes in anything but a Quixotic spirit. Although he is sincerely attached to the monarchy, the condition of the Church is evidently a matter of greater concern to him: Cromwell would have done much to reconcile the royalists to his government, had it been possible for him to have restored the liturgy and episcopacy. The same lesson is to be derived from his demeanor during the reigns of Charles and James. The exultation with which the Restoration is at first hailed soon evaporates. The scandals of the Court are an offense, notwithstanding Evelyn's personal attachment to the King. But the chief point is not vice or favoritism or mismanagement, but alliances with Roman Catholic powers against Protestant nations. Evelyn is enraged to see Charles missing the part so clearly pointed out to him by Providence as the protector of the Protestant religion all over Europe. The conversion of the Duke of York is a fearful blow, James's ecclesiastical policy after his accession adds to Evelyn's discontent day by day, while political tyranny passes almost without remark. At last the old cavalier is glad to welcome the Prince of Orange as deliverer, and though he has no enthusiasm for William in his character as King, he remains his dutiful subject. Just because Evelyn was by no means an extraordinary person, he represents the plain straightforward sense of the English gentry. The questions of the seventeenth century were far more religious than political. The synthesis "Church and King" expressed the dearest convictions of the great

majority of English country families, but when the two became incompatible they left no doubt which held the first place in their hearts. They acted instinctively on the principle of the Persian lady who preferred her brother to her husband. It was not impossible to find a new King, but there was no alternative to the English Church.

Evelyn's memoirs thus possess a value far exceeding the modest measure of worth allowed them by De Quincey: "They are useful as now and then enabling one to fix the date of a particular event, but for little besides." The Diary's direct contribution to historical accuracy is insignificant; it is an index, not to chronological minutiae, but to the general progress of moral and political improvement. The editor of 1857 certainly goes too far in asserting that "All that might have been excluded from the range of his opinions, his feelings and sympathies embraced"; but it is interesting to observe the gradual widening of Evelyn's sympathies with good men of all parties, and to find him in his latter days criticising the evidence produced in support of the Popish Plot on the one hand, and deploring the just condemnation of Algernon Sydney on the other. It is true that, so far as the sufferings of his country are concerned, his attitude is rather that of the Levite than of the Samaritan; but more lively popular sympathies would have destroyed the peculiar value attaching to the testimony of the reluctant witness. We should, for example, have thought little of such a passage as the following from the pen of Burnet, from Evelyn it is significant indeed:—

*October 14, 1688.*—The King's birthday. No guns from the Tower as usual. The sun eclipsed at its rising. This day signal for the victory of William the Conqueror against Harold, near Battel in Sussex. The wind, which had been hitherto west, was east all this day. Wonderful expectation of the Dutch fleet. Public prayers ordered to be read in the churches against invasion.

It might be difficult to produce a nearer approximation in secular literature to Daniel's "*Mene, Mene, Tekel, Upharsin.*"

There is little else in the Diary equally striking, though Evelyn's description of Whitehall on the eve of the death of Charles the Second ranks among the memorable passages of the language. It is nevertheless full of interesting anecdotes and curious notices, especially of the

scientific research which, in default of any adequate public organization, was in that age more efficaciously promoted by students than by professors. De Quincey censures Evelyn for omitting to record the conversation of the men with whom he associated, but he does not consider that the Diary in its present shape is a digest of memoranda made long previously, and that time failed at one period and memory at the other. De Quincey, whose extreme acuteness was commonly evinced on the negative side of a question, saw the weak points of the Diary upon its first publication much more clearly than his contemporaries did, and was betrayed into illiberality by resentment at what he thought its undeserved vogue. Evelyn has in truth been fortunate; his record, which his contemporaries would have neglected, appeared (1818) just in time to be a precursor of the Anglican movement, a tendency evinced in a similar fashion by the vindication, no doubt mistaken, of the Caroline authorship of the "Icon Basilike." Evelyn was a welcome encounter to men of this cast of thought, and was hailed as a model of piety, culture, and urbanity, without sufficient consideration of his deficiencies as a loyalist and a patriot. It also conduced to his reputation that all his other writings should have virtually perished except his "Sylva," like his Diary a landmark in the history of improvement, though in a widely different department. But for his lack of diplomatic talent, he might be compared with an eminent and much applauded, but in our times somewhat decrecent, contemporary, Sir William Temple. Both these eminent persons would have aroused a warmer feeling in posterity, and have effected more for its instruction and entertainment, if they could occasionally have dashed their dignity with an infusion of the grotesqueness, we will not say of Pepys, but of Roger North. To them, however, their dignity was their character, and although we could have wished them a larger measure of geniality, we must feel indebted to them for their preservation of a refined social type.

*Richard Garnett*

## EDITOR'S INTRODUCTION

---

VELYN lived in the busy and important times of King Charles I., Oliver Cromwell, King Charles II., King James II., and King William, and early accustomed himself to note such things as occurred, which he thought worthy of remembrance. He was known to, and had much personal intercourse with, the Kings Charles II. and James II.; and he was in habits of great intimacy with many of the ministers of these two monarchs, and with many of the eminent men of those days, as well among the clergy as the laity. Foreigners distinguished for learning, or arts, who came to England, did not leave it without visiting him.

The following pages contribute extensive and important particulars of this eminent man. They show that he did not travel merely to count steeples, as he expresses himself in one of his Letters: they develop his private character as one of the most amiable kind. With a strong predilection for monarchy, with a personal attachment to Kings Charles II. and James II., formed when they resided at Paris, he was yet utterly averse to the arbitrary measures of these monarchs.

Strongly and steadily attached to the doctrine and practice of the Church of England, he yet felt the most liberal sentiments for those who differed from him in opinion. He lived in intimacy with men of all persuasions; nor did he think it necessary to break connection with anyone who had ever been induced to desert the Church of England, and embrace the doctrines of that of Rome. In writing to the brother of a gentleman thus circumstanced, in 1659, he expresses himself in this admirable manner: "For the rest, we must commit to Providence the success of times and mitigation of proselytical fervors; having for my own particular a very great charity for all who sincerely adore the Blessed Jesus, our common and dear Saviour, as being full of hope that God (however the present zeal of some, and the

scandals taken by others at the instant [present] affliction of the Church of England may transport them) will at last compassionate our infirmities, clarify our judgments, and make abatement for our ignorances, superstructures, passions, and errors of corrupt times and interests, of which the Romish persuasion can no way acquit herself, whatever the present prosperity and secular polity may pretend. But God will make all things manifest in his own time, only let us possess ourselves in patience and charity. This will cover a multitude of imperfections."

He speaks with great moderation of the Roman Catholics in general, admitting that some of the laws enacted against them might be mitigated; but of the Jesuits he had the very worst opinion, considering them as a most dangerous Society, and the principal authors of the misfortunes which befell King James II., and of the horrible persecutions of the Protestants in France and Savoy.

He must have conducted himself with uncommon prudence and address, for he had personal friends in the Court of Cromwell, at the same time that he was corresponding with his father-in-law, Sir Richard Browne, the Ambassador of King Charles II. at Paris; and at the same period that he paid his court to the King, he maintained his intimacy with a disgraced minister.

In his travels, he made acquaintance not only with men eminent for learning, but with men ingenious in every art and profession.

His manners we may presume to have been most agreeable; for his company was sought by the greatest men, not merely by inviting him to their own tables, but by their repeated visits to him at his own house; and this was equally the case with regard to ladies, of many of whom he speaks in the highest style of admiration, affection, and respect. He was master of the French, Italian, and Spanish languages. That he had read a great deal is manifest; but at what time he found opportunities for study, it is not easy to say. He acknowledges himself to have been idle, while at Oxford; and, when on his travels, he had little time for reading, except when he stayed about nineteen weeks in France, and at Padua, where he was likewise stationary for several months. At Rome, he remained a considerable time;

but, while there, he was so continually engaged in viewing the great variety of interesting objects to be seen in that city, that he could have found little leisure for reading. When resident in England, he was so much occupied in the business of his numerous offices, in paying visits, in receiving company at home, and in examining whatever was deemed worthy of curiosity, or of scientific observation, that it is astonishing how he found the opportunity to compose the numerous books which he published, and the much greater number of Papers, on almost every subject, which still remain in manuscript; to say nothing of the very extensive and voluminous correspondence which he appears to have carried on during his long life, with men of the greatest eminence in Church and State, and the most distinguished for learning, both Englishmen and foreigners. In this correspondence he does not seem to have made use of an amanuensis; and he has left transcripts in his own hand of great numbers of letters both received and sent. He observes, indeed, in one of these, that he seldom went to bed before twelve, or closed his eyes before one o'clock.

He was happy in a wife of congenial dispositions with his own, of an enlightened mind, who had read much, and was skilled in etching and painting, yet attentive to the domestic concerns of her household, and a most affectionate mother.

His grandfather, George, was not the first of the family who settled in Surrey. John, father of this George, was of Kingston, in 1520, and married a daughter of David Vincent, Esq., Lord of the Manor of Long Ditton, near Kingston, which afterward came in the hands of George, who there carried on the manufacture of gunpowder. He purchased very considerable estates in Surrey, and three of his sons became heads of three families, viz, Thomas, his eldest son, at Long Ditton; John, at Godstone, and Richard at Wotton. Each of these three families had the title of Baronet conferred on them at different times, viz, at Godstone, in 1660; Long Ditton, in 1683; and Wotton, in 1713.

The manufacture of gunpowder was carried on at Godstone as well as at Long Ditton; but it does not appear that there ever was any mill at Wotton, or that the purchase of that place was made with such a view.

It may be not altogether incurious to observe, that though Mr. Evelyn's father was a man of very considerable fortune, the first rudiments of this son's learning were acquired from the village schoolmaster over the porch of Wotton Church. Of his progress at another school, and at college, he himself speaks with great humility; nor did he add much to his stock of knowledge, while he resided in the Middle Temple, to which his father sent him, with the intention that he should apply to what he calls "an impolished study," which he says he never liked.

The "Biographia" does not notice his tour in France, Flanders, and Holland, in 1641, when he made a short campaign as a volunteer in an English regiment then in service in Flanders.\* Nor does it notice his having set out, with intent to join King Charles I. at Brentford; and subsequently desisting when the result of that battle became known, on the ground that his brother's as well as his own estates were so near London as to be fully in power of the Parliament, and that their continued adherence would have been certain ruin to themselves without any advantage to his Majesty. In this dangerous conjuncture he asked and obtained the King's leave to travel. Of these travels, and the observations he made therein, an ample account is given in this Diary.

The national troubles coming on before he had engaged in any settled plan for his future life, it appears that he had thoughts of living in the most private manner, and that, with his brother's permission, he had even begun to prepare a place for retirement at Wotton. Nor did he afterward wholly abandon his intention, if the plan of a college, which he sent to Mr. Boyle in 1659, was really formed on a serious idea. This scheme is given at length in the "Biographia," and in Dr. Hunter's edition of the "Sylva" in 1776; but it may be observed that he proposes it should not be more than twenty-five miles from London.

As to his answer to Sir George Mackenzie's panegyric on Solitude, in which Mr. Evelyn takes the opposite part

\*This expression is, perhaps, hardly applicable to the fact of Evelyn's having witnessed a siege merely as a curious spectator. He reached the camp on the 2d, and left it on the 8th of August, 1641. It is certain, however, that during these six days he took his turn on duty, and trailed a pike.—See Diary.

and urges the preference to which public employment and an active life is entitled,—it may be considered as the playful essay of one who, for the sake of argument, would controvert another's position, though in reality agreeing with his own opinion; if we think him serious in two letters to Mr. Abraham Cowley, dated 12th March and 24th August, 1666, in the former of which he writes: "You had reason to be astonished at the presumption, not to name it affront, that I, who have so highly celebrated recess, and envied it in others, should become an advocate for the enemy, which of all others it abhors and flies from. I conjure you to believe that I am still of the same mind, and that there is no person alive who does more honor and breathe after the life and repose you so happily cultivate and advance by your example; but, as those who praised dirt, a flea, and the gout, so have I public employment in that trifling Essay, and that in so weak a style compared with my antagonist's, as by that alone it will appear I neither was nor could be serious, and I hope you believe I speak my very soul to you.

*'Sunt enim Musis sua ludicra mista Camenis  
Otia sunt——'*"

In the other, he says, "I pronounce it to you from my heart as oft as I consider it, that I look on your fruitions with inexpressible emulation, and should think myself more happy than crowned heads, were I, as you, the arbiter of mine own life, and could break from those gilded toys to taste your well-described joys with such a wife and such a friend, whose conversation exceeds all that the mistaken world calls happiness." But, in truth, Mr. Evelyn's mind was too active to admit of solitude at all times, however desirable it might appear to him in theory.

After he had settled at Deptford, which was in the time of Cromwell, he kept up a constant correspondence with Sir Richard Browne (his father-in-law), the King's Ambassador at Paris; and though his connection must have been known, it does not appear that he met with any interruption from the government here. Indeed, though he remained a decided Royalist, he managed so well as to have intimate friends even among those nearly connected with Cromwell; and to this we may attribute

his being able to avoid taking the Covenant, which he says he never did take. In 1659, he published "An Apology for the Royal Party"; and soon after printed a paper which was of great service to the King, entitled "The Late News, or Message from Brussels Unmasked," which was an answer to a pamphlet designed to represent the King in the worst light.

On the Restoration, we find him very frequently at Court; and he became engaged in many public employments, still attending to his studies and literary pursuits. Among these, is particularly to be mentioned the Royal Society, in the establishment and conduct of which he took a very active part. He procured Mr. Howard's library to be given to them; and by his influence, in 1667, the Arundelian Marbles were obtained for the University of Oxford.

His first appointment to a public office was in 1662, as a Commissioner for reforming the buildings, ways, streets, and incumbrances, and regulating hackney coaches in London. In the same year he sat as a Commissioner on an inquiry into the conduct of the Lord Mayor, etc., concerning Sir Thomas Gresham's charities. In 1664 he was in a commission for regulating the Mint; in the same year was appointed one of the Commissioners for the care of the Sick and Wounded in the Dutch war; and he was continued in the same employment in the second war with that country.

He was one of the Commissioners for the repair of St. Paul's Cathedral, shortly before it was burned in 1666. In that year he was also in a commission for regulating the farming and making saltpetre; and in 1671 we find him a Commissioner of Plantations on the establishment of the board, to which the Council of Trade was added in 1672.

In 1685 he was one of the Commissioners of the Privy Seal, during the absence of the Earl of Clarendon (who held that office), on his going Lord Lieutenant to Ireland. On the foundation of Greenwich Hospital, in 1695, he was one of the Commissioners; and, on the 30th of June, 1696, laid the first stone of that building. He was also appointed Treasurer, with a salary of £200 a year; but he says that it was a long time before he received any part of it.

When the Czar of Muscovy came to England, in 1698, proposing to instruct himself in the art of shipbuilding, he was desirous of having the use of Sayes Court, in consequence of its vicinity to the King's dockyard at Deptford. This was conceded; but during his stay he did so much damage that Mr. Evelyn had an allowance of £150 for it. He especially regrets the mischief done to his famous holly hedge, which might have been thought beyond the reach of damage. But one of Czar Peter's favorite recreations had been to demolish the hedges by riding through them in a wheelbarrow.

October, 1699, his elder brother, George Evelyn, dying without male issue, aged eighty-three, he succeeded to the paternal estate; and in May following, he quitted Sayes Court and went to Wotton, where he passed the remainder of his life, with the exception of occasional visits to London, where he retained a house. In the great storm of 1703, he mentions in his last edition of the "*Sylva*," above one thousand trees were blown down in sight of his residence.

He died at his house in London, 27th February, 1705-6, in the eighty-sixth year of his age, and was buried at Wotton. His lady survived him nearly three years, dying 9th February, 1708-9, in her seventy-fourth year, and was buried near him at Wotton.

Of Evelyn's children, a son, who died at the age of five, and a daughter, who died at the age of nineteen, were almost prodigies. The particulars of their extraordinary endowments, and the profound manner in which he was affected at their deaths, may be seen in these volumes.

One daughter was well and happily settled; another less so; but she did not survive her marriage more than a few months. The only son who lived to the age of manhood, inherited his father's love of learning, and distinguished himself by several publications.

Mr. Evelyn's employment as a Commissioner for the care of the Sick and Wounded was very laborious; and, from the nature of it, must have been extremely unpleasant. Almost the whole labor was in his department, which included all the ports between the river Thames and Portsmouth; and he had to travel in all seasons and weathers, by land and by water, in the execution of his

office, to which he gave the strictest attention. It was rendered still more disagreeable by the great difficulty which he found in procuring money for support of the prisoners. In the library at Wotton, are copies of numerous letters to the Lord Treasurer and Officers of State, representing, in the strongest terms, the great distress of the poor men, and of those who had furnished lodging and necessaries for them. At one time, there were such arrears of payment to the victuallers, that, on landing additional sick and wounded, they lay some time in the streets, the publicans refusing to receive them, and shutting up their houses. After all this trouble and fatigue, he found as great difficulty in getting his accounts settled.\* In January, 1665-6, he formed a plan for an Infirmary at Chatham, which he sent to Mr. Pepys, to be laid before the Admiralty, with his reasons for recommending it; but it does not appear that it was carried into execution.

His employments, in connection with the repair of St. Paul's (which, however, occupied him but a brief time), as in the Commission of Trade and Plantations, and in the building of Greenwich Hospital, were much better adapted to his inclinations and pursuits.

As a Commissioner of the Privy Seal in the reign of King James II., he had a difficult task to perform. He was most steadily attached to the Church of England, and the King, required the Seal to be affixed to many things incompatible with the welfare of that Church. This, on some occasions, he refused to do, particularly to a license to Dr. Obadiah Walker to print Popish books;† and on other occasions he absented himself, leaving it to

\* 2d October, 1665, he writes to the Lord Chancellor, Lord Arlington, Sir William Coventry, and Sir Philip Warwick, complaining of want of money for the prisoners: praying that while he and his brother Commissioners adventure their persons and all that is dear to them, in this uncomfortable service, they may not be exposed to ruin, and to a necessity of abandoning their care, and adding that they have lost their officers and servants by the pestilence, and are hourly environed with the saddest objects of perishing people. "I have," says he, "fifteen places full of sick men, where they put me to unspeakable trouble; the magistrates and justices, who should further us in our exigencies, hindering the people from giving us quarters, jealous of the contagion, and causing them to shut the doors at our approach."

† Dr. Walker had been a member of the Church of England, but had renounced it, and turned Papist.

his brother Commissioners to act as they thought fit. Such, however, was the King's estimation of him, that no displeasure was evinced on this account.

Of Evelyn's attempt to bring Colonel Morley (Cromwell's Lieutenant of the Tower, immediately preceding the Restoration) over to the King's interest, an imperfect account is given in the "Biographia." The fact is, that there was great friendship between these gentlemen, and Evelyn did endeavor to engage the Colonel in the King's interest. He saw him several times, and put his life into his hands by writing to him on 12th January, 1659-60; he did not succeed, and Colonel Morley was too much his friend to betray him; but so far from the Colonel having settled matters privately with Sir Anthony Ashley Cooper, or General Monk, as there described, he was obliged, when the Restoration took place, actually to apply to Evelyn to procure his pardon; who obtained it accordingly, though, as he states, the Colonel was obliged to pay a large sum of money for it. This could not have happened, if there had been any previous negotiation with General Monk.

Dr. Campbell took some pains to vindicate Mr. Evelyn's book, entitled, "Navigation and Commerce, their Origin and Progress," from the charge of being an imperfect work, unequal to the expectation excited by the title. But the Doctor, who had not the information which this Journal so amply affords on this subject, was not aware that what was so printed was nothing more than an Introduction to the History of the Dutch War; a work undertaken by Evelyn at the express command of King Charles II., and the materials for which were furnished by the Officers of State. The completion of this work, after considerable progress had been made in it, was put a stop to by the King himself, for what reason does not appear; but perhaps it was found that Evelyn was inclined to tell too much of the truth concerning a transaction, which it will be seen by his Journal that he utterly reprobated. His copy of the History, as far as he had proceeded, he put into the hands of his friend, Mr. Pepys, of the Admiralty, who did not return it; but the books and manuscripts belonging to Mr. Pepys passed into the possession of Magdalen College, Cambridge.

From the numerous authors who have spoken in high terms of Mr. Evelyn, we will select the two following notices of him.

In the "Biographia Britannica" Dr. Campbell says, "It is certain that very few authors who have written in our language deserve the character of able and agreeable writers so well as Mr. Evelyn, who, though he was acquainted with most sciences, and wrote upon many different subjects, yet was very far, indeed the farthest of most men of his time, from being a superficial writer. He had genius, he had taste, he had learning; and he knew how to give all these a proper place in his works, so as never to pass for a pedant, even with such as were least in love with literature, and to be justly esteemed a polite author by those who knew it best."

Horace Walpole (afterward Earl of Orford), in his Catalogue of Engravers, gives us the following admirably drawn character: "If Mr. Evelyn had not been an artist himself, as I think I can prove he was, I should yet have found it difficult to deny myself the pleasure of allotting him a place among the arts he loved, promoted, patronized; and it would be but justice to inscribe his name with due panegyric in these records, as I have once or twice taken the liberty to criticise him. But they are trifling blemishes compared with his amiable virtues and beneficence; and it may be remarked that the worst I have said of him is, that he knew more than he always communicated. It is no unwelcome satire to say, that a man's intelligence and philosophy is inexhaustible. I mean not to write his biography, but I must observe, that his life, which was extended to eighty-six years, was a course of inquiry, study, curiosity, instruction, and benevolence. The works of the Creator, and the minute labors of the creature, were all objects of his pursuit. He unfolded the perfection of the one, and assisted the imperfection of the other. He adored from examination; was a courtier that flattered only by informing his Prince, and by pointing out what was worthy of him to countenance; and really was the neighbor of the Gospel, for there was no man that might not have been the better for him. Whoever peruses a list of his works will subscribe to my assertion. He was one of the first promoters of the Royal Society; a patron of the ingenious and the indigent; and

peculiarly serviceable to the lettered world; for, besides his writings and discoveries, he obtained the Arundelian Marbles for the University of Oxford, and the Arundelian Library for the Royal Society. Nor is it the least part of his praise, that he who proposed to Mr. Boyle the erection of a Philosophical College for retired and speculative persons, had the honesty to write in defense of active life against Sir George Mackenzie's 'Essay on Solitude.' He knew that retirement, in his own hands, was industry and benefit to mankind; but in those of others, laziness and inutility."

Evelyn was buried in the Dormitory adjoining Wotton Church.

On a white marble, covering a tomb shaped like a coffin, raised about three feet above the floor, is inscribed:

Here lies the Body  
of JOHN EVELYN, Esq.,  
of this place, second son  
of Richard Evelyn, Esq.;  
who having serv'd the Publick

VOLUME II.  
1665-1706

## DIARY OF JOHN EVELYN.

---

I WAS born at Wotton, in the County of Surrey, about twenty minutes past two in the morning, being on

Tuesday the 31st and last of October, 1620, after my father had been married about seven years,\* and that my mother had borne him three children; viz, two daughters and one son, about the 33d year of his age, and the 23d of my mother's.

My father, named Richard, was of a sanguine complexion, mixed with a dash of choler: his hair inclining to light, which, though exceedingly thick, became hoary by the time he had attained to thirty years of age; it was somewhat curled toward the extremities; his beard, which he wore a little peaked, as the mode was, of a brownish color, and so continued to the last, save that it was somewhat mingled with gray hairs about his cheeks, which, with his countenance, were clear and fresh-colored; his eyes extraordinary quick and piercing; an ample forehead,—in sum, a very well-composed visage and manly aspect: for the rest, he was but low of stature, yet very strong. He was, for his life, so exact and temperate, that I have heard he had never been surprised by excess, being ascetic and sparing. His wisdom was great, and his judgment most acute; of solid discourse, affable, humble, and in nothing affected; of a thriving, neat, silent, and methodical genius, discreetly severe, yet liberal upon all just occasions, both to his children, to strangers, and servants; a lover of hospitality; and, in brief, of a singular and Christian moderation in all his actions; not illiterate, nor obscure, as, having continued Justice of the Peace and of the Quorum, he served his country as High Sheriff, being, as I take it,

\* He was married at St. Thomas's, Southwark, 27th January, 1613. My sister Eliza was born at nine at night, 28th November, 1614; Jane at four in the morning, 16th February, 1616; my brother George at nine at night, Wednesday, 18th June, 1617; and my brother Richard, 9th November, 1622.—*Note by Evelyn.*

the last dignified with that office for Sussex and Surrey together, the same year, before their separation. He was yet a studious decliner of honors and titles; being already in that esteem with his country, that they could have added little to him besides their burden. He was a person of that rare conversation that, upon frequent recollection, and calling to mind passages of his life and discourse, I could never charge him with the least passion, or inadvertency. His estate was esteemed about £4000 per annum, well wooded, and full of timber.

My mother's name was Eleanor, sole daughter and heiress of John Standsfield, Esq., of an ancient and honorable family (though now extinct) in Shropshire, by his wife Eleanor Comber, of a good and well-known house in Sussex. She was of proper personage; of a brown complexion; her eyes and hair of a lovely black; of constitution more inclined to a religious melancholy, or pious sadness; of a rare memory, and most exemplary life; for economy and prudence, esteemed one of the most conspicuous in her country; which rendered her loss much deplored, both by those who knew, and such as only heard of her.

Thus much, in brief, touching my parents; nor was it reasonable I should speak less of them to whom I owe so much.

The place of my birth was Wotton, in the parish of Wotton, or Blackheath, in the county of Surrey, the then mansion-house of my father, left him by my grandfather, afterward and now my eldest brother's. It is situated in the most southern part of the shire; and, though in a valley, yet really upon part of Leith Hill, one of the most eminent in England for the prodigious prospect to be seen from its summit, though by few observed. From it may be discerned twelve or thirteen counties, with part of the sea on the coast of Sussex, in a serene day. The house is large and ancient, suitable to those hospitable times, and so sweetly environed with those delicious streams and venerable woods, as in the judgment of strangers as well as Englishmen it may be compared to one of the most pleasant seats in the nation, and most tempting for a great person and a wanton purse to render it conspicuous. It has rising grounds, meadows, woods, and water, in abundance.

The distance from London little more than twenty miles, and yet so securely placed, as if it were one hundred; three miles from Dorking, which serves it abundantly with provision as well of land as sea; six from Guildford, twelve from Kingston. I will say nothing of the air, because the pre-eminence is universally given to Surrey, the soil being dry and sandy; but I should speak much of the gardens, fountains, and groves that adorn it, were they not as generally known to be among the most natural, and (till this later and universal luxury of the whole nation, since abounding in such expenses) the most magnificent that England afforded; and which indeed gave one of the first examples to that elegance, since so much in vogue, and followed in the managing of their waters, and other elegancies of that nature. Let me add, the contiguity of five or six manors, the patronage of the livings about it, and what Themistocles pronounced for none of the least advantages—the good neighborhood. All which conspire here to render it an honorable and handsome royalty, fit for the present possessor, my worthy brother, and his noble lady, whose constant liberality gives them title both to the place and the affections of all that know them. Thus, with the poet:

*Nescio quâ natale solum dulcedine cunctos  
Ducit, et immemores non sinit esse sui.*

I had given me the name of my grandfather, my mother's father, who, together with a sister of Sir Thomas Evelyn, of Long Ditton, and Mr. Comber, a near relation of my mother, were my susceptrors. The solemnity (yet upon what accident I know not, unless some indisposition in me) was performed in the dining-room by Parson Higham, the present incumbent of the parish, according to the forms prescribed by the then glorious Church of England.

I was now (in regard to my mother's weakness, or rather custom of persons of quality) put to nurse to one Peter, a neighbor's wife and tenant, of a good, comely, brown, wholesome complexion, and in a most sweet place toward the hills, flanked with wood and refreshed with streams; the affection to which kind of solitude I sucked in with my very milk. It appears, by a note of my

father's, that I sucked till 17th of January, 1622, or at least I came not home before.\*

1623. The very first thing that I can call to memory, and from which time forward I began to observe, was this year (1623) my youngest brother, being in his nurse's arms, who, being then two days and nine months younger than myself, was the last child of my dear parents.

1624. I was not initiated into any rudiments until near four years of age, and then one Frier taught us at the church-porch of Wotton; and I do perfectly remember the great talk and stir about Il Conde Gondomar, now Ambassador from Spain (for near about this time was the match of our Prince with the Infanta proposed); and the effects of that comet, 1618, still working in the prodigious revolutions now beginning in Europe, especially in Germany, whose sad commotions sprang from the Bohemians' defection from the Emperor Matthias; upon which quarrel the Swedes broke in, giving umbrage to the rest of the princes, and the whole Christian world cause to deplore it, as never since enjoying perfect tranquillity.

1625. I was this year (being the first of the reign of King Charles) sent by my father to Lewes, in Sussex, to be with my grandfather, Standsfield, with whom I passed my childhood. This was the year in which the pestilence was so epidemical, that there died in London 5,000 a week, and I well remember the strict watches and examinations upon the ways as we passed; and I was shortly after so dangerously sick of a fever that (as I have heard) the physicians despaired of me.

1626. My picture was drawn in oil by one Chanterell, no ill painter.

1627. My grandfather, Standsfield, died this year, on the 5th of February: I remember perfectly the solemnity at his funeral. He was buried in the parish church of All Souls, where my grandmother, his second wife, erected him a pious monument. About this time, was the con-

\*The whole of this passage, so characteristic of the writer's tastes and genius, and both the paragraphs before and after it, are printed for the first time in this edition. Portions of the preceding description of Wotton are also first taken from the original; and it may not be out of place to add that, more especially in the first fifty pages of this volume, a very large number of curious and interesting additions are made to Evelyn's text from the Manuscript of the Diary at Wotton.

secration of the Church of South Malling, near Lewes, by Dr. Field, Bishop of Oxford (one Mr. Coxhall preached, who was afterward minister); the building whereof was chiefly procured by my grandfather, who having the impropriation, gave £20 a year out of it to this church. I afterward sold the impropriation. I laid one of the first stones at the building of the church.

1628-30. It was not till the year 1628, that I was put to learn my Latin rudiments, and to write, of one Citolin, a Frenchman, in Lewes. I very well remember that general muster previous to the Isle of Rhè's expedition, and that I was one day awakened in the morning with the news of the Duke of Buckingham being slain by that wretch, Felton, after our disgrace before La Rochelle. And I now took so extraordinary a fancy to drawing and designing, that I could never after wean my inclinations from it, to the expense of much precious time, which might have been more advantageously employed. I was now put to school to one Mr. Potts, in the Cliff at Lewes, from whom, on the 7th of January, 1630, being the day after Epiphany, I went to the free-school at Southover, near the town, of which one Agnes Morley had been the foundress, and now Edward Snatt was the master, under whom I remained till I was sent to the University.\* This year, my grandmother (with whom I sojourned) being married to one Mr. Newton, a learned and most religious gentleman, we went from the Cliff to dwell at his house in Southover. I do most perfectly remember the jubilee which was universally expressed for the happy birth of the Prince of Wales, 29th of May, now Charles II., our most gracious Sovereign.

1631. There happened now an extraordinary dearth in England, corn bearing an excessive price; and, in imitation of what I had seen my father do, I began to observe matters more punctually, which I did use to set down in a blank almanac. The Lord of Castlehaven's arraignment for many shameful exorbitances was now all the talk, and the birth of the Princess Mary, afterward Princess of Orange.

21st October, 1632. My eldest sister was married to Edward Darcy, Esq., who little deserved so excellent a

\* Long afterward, Evelyn was in the habit of paying great respect to his old teacher.

person, a woman of so rare virtue. I was not present at the nuptials; but I was soon afterward sent for into Surrey, and my father would willingly have weaned me from my fondness of my too indulgent grandmother, intending to have placed me at Eton; but, not being so provident for my own benefit, and unreasonably terrified with the report of the severe discipline there, I was sent back to Lewes; which perverseness of mine I have since a thousand times deplored. This was the first time that ever my parents had seen all their children together in prosperity. While I was now trifling at home, I saw London, where I lay one night only. The next day, I dined at Beddington, where I was much delighted with the gardens and curiosities. Thence, we returned to the Lady Darcy's, at Sutton; thence to Wotton; and, on the 16th of August following, 1633, back to Lewes.

3d November, 1633. This year my father was appointed Sheriff, the last, as I think, who served in that honorable office for Surrey and Sussex, before they were disjoined. He had 116 servants in liveries, every one liveried in green satin doublets; divers gentlemen and persons of quality waited on him in the same garb and habit, which at that time (when thirty or forty was the usual retinue of the High Sheriff) was esteemed a great matter. Nor was this out of the least vanity that my father exceeded (who was one of the greatest decliners of it); but because he could not refuse the civility of his friends and relations, who voluntarily came themselves, or sent in their servants. But my father was afterward most unjustly and spitefully molested by that jeering judge, Richardson, for reprieving the execution of a woman, to gratify my Lord of Lindsey, then Admiral: but out of this he emerged with as much honor as trouble. The king made this year his progress into Scotland, and Duke James was born.

15th December, 1634: My dear sister, Darcy, departed this life, being arrived to her 20th year of age; in virtue advanced beyond her years, or the merit of her husband, the worst of men. She had been brought to bed the 2d of June before, but the infant died soon after her, the 24th of December. I was therefore sent for home the second time, to celebrate the obsequies of my sister; who was interred in a very honorable manner in our

dormitory joining to the parish church, where now her monument stands.

1635. But my dear mother being now dangerously sick, I was, on the 3d of September following, sent for to Wotton. Whom I found so far spent, that, all human assistance failing, she in a most heavenly manner departed this life upon the 29th of the same month, about eight in the evening of Michaelmas-day. It was a malignant fever which took her away, about the 37th of her age, and 22d of her marriage, to our irreparable loss and the regret of all that knew her. Certain it is, that the visible cause of her indisposition proceeded from grief upon the loss of her daughter, and the infant that followed it; and it is as certain, that when she perceived the peril whereto its excess had engaged her, she strove to compose herself and allay it; but it was too late, and she was forced to succumb. Therefore summoning all her children then living (I shall never forget it), she expressed herself in a manner so heavenly, with instructions so pious and Christian, as made us strangely sensible of the extraordinary loss then imminent; after which, embracing every one of us she gave to each a ring with her blessing and dismissed us. Then, taking my father by the hand, she recommended us to his care; and, because she was extremely zealous for the education of my younger brother, she requested my father that he might be sent with me to Lewes; and so having importuned him that what he designed to bestow on her funeral, he would rather dispose among the poor, she labored to compose herself for the blessed change which she now expected. There was not a servant in the house whom she did not expressly send for, advise, and infinitely affect with her counsel. Thus she continued to employ her intervals, either instructing her relations, or preparing of herself.

Though her physicians, Dr. Meyerell, Dr. Clement, and Dr. Rand, had given over all hopes of her recovery, and Sir Sanders Duncombe had tried his celebrated and famous powder, yet she was many days impairing, and endured the sharpest conflicts of her sickness with admirable patience and most Christian resignation, retaining both her intellectuals and ardent affections for her dissolution, to the very article of her departure. When

near her dissolution, she laid her hand on every one of her children; and taking solemn leave of my father, with elevated heart and eyes, she quietly expired, and resigned her soul to God. Thus ended that prudent and pious woman, in the flower of her age, to the inconsolable affliction of her husband, irreparable loss of her children, and universal regret of all that knew her. She was interred, as near as might be, to her daughter Darcy, the 3d of October, at night, but with no mean ceremony.

It was the 3d of the ensuing November, after my brother George was gone back to Oxford, ere I returned to Lewes, when I made way, according to instructions received of my father, for my brother Richard, who was sent the 12th after.

1636. This year being extremely dry, the pestilence much increased in London, and divers parts of England.

13th February, 1637: I was especially admitted (and, as I remember, my other brother) into the Middle Temple, London, though absent, and as yet at school. There were now large contributions to the distressed Palatinates.

The 10th of December my father sent a servant to bring us necessaries, and the plague beginning now to cease, on the 3d of April, 1637, I left school, where, till about the last year, I have been extremely remiss in my studies; so as I went to the University rather out of shame of abiding longer at school, than for any fitness, as by sad experience I found; which put me to re-learn all that I had neglected, or but perfunctorily gained.

10th May, 1637. I was admitted a Fellow-commoner of Baliol College, Oxford; and, on the 29th, I was matriculated in the vestry of St. Mary's, where I subscribed the Articles, and took the oaths: Dr. Baily, head of St. John's, being vice-chancellor, afterward bishop. It appears by a letter of my father's, that he was upon treaty with one Mr. Bathurst (afterward Doctor and President), of Trinity College, who should have been my tutor; but, lest my brother's tutor, Dr. Hobbs, more zealous in his life than industrious to his pupils, should receive it as an affront, and especially for that Fellow-commoners in Baliol were no more exempt from exercise than the meanest scholars there, my father sent me thither to one Mr. George Bradshaw (*nomen invisum!* yet the son of an

excellent father, beneficed in Surrey). I ever thought my tutor had parts enough; but as his ambition made him much suspected of the College, so his grudge to Dr. Lawrence, the governor of it (whom he afterward supplanted), took up so much of his time, that he seldom or never had the opportunity to discharge his duty to his scholars. This I perceiving, associated myself with one Mr. James Thicnesse (then a young man of the foundation, afterward a Fellow of the house), by whose learned and friendly conversation I received great advantage. At my first arrival, Dr. Parkhurst was master: and after his decease, Dr. Lawrence, a chaplain of his Majesty's and Margaret Professor, succeeded, an acute and learned person; nor do I much reproach his severity, considering that the extraordinary remissness of discipline had (till his coming) much detracted from the reputation of that College.

There came in my time to the College one Nathaniel Conopios, out of Greece, from Cyrill, the patriarch of Constantinople, who, returning many years after, was made (as I understand) Bishop of Smyrna. He was the first I ever saw drink coffee; which custom came not into England till thirty years after.\*

After I was somewhat settled there in my formalities (for then was the University exceedingly regular, under the exact discipline of William Laud, Archbishop of Canterbury, then Chancellor), I added, as benefactor to the library of the College, these books—*“ex dono Johannis Evelyni, hujus Coll. Socio-Commensalis, filii Richardi Evelyni, & com. Surriæ, armig.”*—

*“Zanchii Opera,”* vols. 1, 2, 3.

*“Granado in Thomam Aquinatem,”* vols. 1, 2, 3.

*“Novarini Electa Sacra,”* and *“Cresolii Anthologia Sacra”*; authors, it seems, much desired by the students of divinity there.

Upon the 2d of July, being the first Sunday of the month, I first received the blessed Sacrament of the Lord's Supper in the college chapel, one Mr. Cooper, a Fellow of the house, preaching; and at this time was the Church of England in her greatest splendor, all things decent, and becoming the Peace, and the persons that governed.

\* Evelyn should have said “till twenty years after,” not thirty. Coffee was introduced into England, and coffee-houses set up, in 1658.

The most of the following week I spent in visiting the Colleges, and several rarities of the University, which do very much affect young comers.

18th July, 1637. I accompanied my eldest brother, who then quitted Oxford, into the country; and, on the 9th of August, went to visit my friends at Lewes, whence I returned the 12th to Wotton. On the 17th of September, I received the blessed Sacrament at Wotton church, and 23d of October went back to Oxford.

5th November, 1637. I received again the Holy Communion in our college chapel, one Prouse, a Fellow (but a mad one), preaching.

9th December, 1637. I offered at my first exercise in the Hall, and answered my opponent; and, upon the 11th following, declaimed in the chapel before the Master, Fellows, and Scholars, according to the custom. The 15th after, I first of all opposed in the Hall.

The Christmas ensuing, being at a Comedy which the gentlemen of Exeter College presented to the University, and standing, for the better advantage of seeing, upon a table in the Hall, which was near to another, in the dark, being constrained by the extraordinary press to quit my station, in leaping down to save myself I dashed my right leg with such violence against the sharp edge of the other board, as gave me a hurt which held me in cure till almost Easter, and confined me to my study.

22d January, 1638. I would needs be admitted into the dancing and vaulting schools; of which late activity one Stokes, the master, did afterward set forth a pretty book, which was published, with many witty elogies before it.

4th February, 1638. One Mr. Wariner preached in our chapel; and, on the 25th, Mr. Wentworth, a kinsman of the Earl of Strafford; after which followed the blessed Sacrament.

13th April, 1638. My father ordered that I should begin to manage my own expenses, which till then my tutor had done; at which I was much satisfied.

9th July, 1638. I went home to visit my friends, and, on the 26th, with my brother and sister to Lewes, where we abode till the 31st; and thence to one Mr. Michael's, of Houghton, near Arundel, where we were very well treated; and, on the 2d of August, to Portsmouth, and thence,

having surveyed the fortifications (a great rarity in that blessed halcyon time in England), we passed into the Isle of Wight, to the house of my Lady Richards, in a place called Yaverland; but were turned the following day to Chichester, where, having viewed the city and fair cathedral, we returned home.

About the beginning of September, I was so afflicted with a quartan ague, that I could by no means get rid of it till the December following. This was the fatal year wherein the rebellious Scots opposed the King, upon the pretense of the introduction of some new ceremonies and the Book of Common Prayer, and madly began our confusions, and their own destruction, too, as it proved in event.

14th January, 1639. I came back to Oxford, after my tedious indisposition, and to the infinite loss of my time; and now I began to look upon the rudiments of music, in which I afterward arrived to some formal knowledge, though to small perfection of hand, because I was so frequently diverted with inclinations to newer trifles.

20th May, 1639. Accompanied with one Mr. J. Crafford (who afterward being my fellow-traveler in Italy, there changed his religion), I took a journey of pleasure to see the Somersetshire baths, Bristol, Cirencester, Malmesbury, Abington, and divers other towns of lesser note; and returned the 25th.

8th October, 1639. I went back to Oxford.

14th December, 1639. According to injunctions from the Heads of Colleges, I went (among the rest) to the Confirmation at St. Mary's, where, after sermon, the Bishop of Oxford laid his hands upon us, with the usual form of benediction prescribed: but this received (I fear) for the more part out of curiosity, rather than with that due preparation and advice which had been requisite, could not be so effectual as otherwise that admirable and useful institution might have been, and as I have since deplored it.

21st January, 1640. Came my brother, Richard, from school, to be my chamber-fellow at the University. He was admitted the next day and matriculated the 31st.

11th April, 1640. I went to London to see the solemnity of his Majesty's riding through the city in state to the Short Parliament, which began the 13th following,—a very

glorious and magnificent sight, the King circled with his royal diadem and the affections of his people: but the day after I returned to Wotton again, where I stayed, my father's indisposition suffering great intervals, till April 27th, when I was sent to London to be first resident at the Middle Temple: so as my being at the University, in regard of these avocations, was of very small benefit to me. Upon May the 5th following, was the Parliament unhappily dissolved; and, on the 20th I returned with my brother George to Wotton, who, on the 28th of the same month, was married at Albury to Mrs. Caldwell (an heiress of an ancient Leicestershire family, where part of the nuptials were celebrated).

10th June, 1640. I repaired with my brother to the term, to go into our new lodgings (that were formerly in Essex-court), being a very handsome apartment just over against the Hall-court, but four pair of stairs high, which gave us the advantage of the fairer prospect; but did not much contribute to the love of that impolished study, to which (I suppose) my father had designed me, when he paid £145 to purchase our present lives, and assignments afterward.

London, and especially the Court, were at this period in frequent disorders, and great insolences were committed by the abused and too happy City: in particular, the Bishop of Canterbury's Palace at Lambeth was assaulted by a rude rabble from Southwark, my Lord Chamberlain imprisoned and many scandalous libels and invectives scattered about the streets, to the reproach of Government, and the fermentation of our since distractions: so that, upon the 25th of June, I was sent for to Wotton, and the 27th after, my father's indisposition augmenting, by advice of the physicians he repaired to the Bath.

7th July, 1640. My brother George and I, understanding the peril my father was in upon a sudden attack of his infirmity, rode post from Guildford toward him, and found him extraordinary weak; yet so as that, continuing his course, he held out till the 8th of September, when I returned home with him in his litter.

15th October, 1640. I went to the Temple, it being Michaelmas Term.

30th December, 1640. I saw his Majesty (coming from

his Northern Expedition) ride in pomp and a kind of ovation, with all the marks of a happy peace, restored to the affections of his people, being conducted through London with a most splendid cavalcade; and on the 3d of November following (a day never to be mentioned without a curse), to that long ungrateful, foolish, and fatal Parliament, the beginning of all our sorrows for twenty years after, and the period of the most happy monarch in the world: *Quis talia fando!*

But my father being by this time entered into a dropsy, an indisposition the most unsuspected, being a person so exemplarily temperate, and of admirable regimen, hastened me back to Wotton, December the 12th; where, the 24th following, between twelve and one o'clock at noon, departed this life that excellent man and indulgent parent, retaining his senses and piety to the last, which he most tenderly expressed in blessing us, whom he now left to the world and the worst of times, while he was taken from the evil to come.

1641. It was a sad and lugubrious beginning of the year, when on the 2d of January, 1640-1, we at night followed the mourning hearse to the church at Wotton; when, after a sermon and funeral oration by the minister, my father was interred near his formerly erected monument, and mingled with the ashes of our mother, his dear wife. Thus we were bereft of both our parents in a period when we most of all stood in need of their counsel and assistance, especially myself, of a raw, vain, uncertain, and very unwary inclination: but so it pleased God to make trial of my conduct in a conjuncture of the greatest and most prodigious hazard that ever the youth of England saw; and, if I did not amidst all this impeach my liberty nor my virtue with the rest who made shipwreck of both, it was more the infinite goodness and mercy of God than the least providence or discretion of mine own, who now thought of nothing but the pursuit of vanity, and the confused imaginations of young men.

15th April, 1641. I repaired to London to hear and see the famous trial of the Earl of Strafford, Lord-Deputy of Ireland, who, on the 22d of March, had been summoned before both Houses of Parliament, and now appeared in

Westminster-hall,\* which was prepared with scaffolds for the Lords and Commons, who, together with the King, Queen, Prince, and flower of the noblesse, were spectators and auditors of the greatest malice and the greatest innocency that ever met before so illustrious an assembly. It was Thomas, Earl of Arundel and Surrey, Earl Marshal of England, who was made High Steward upon this occasion; and the sequel is too well known to need any notice of the event.

On the 27th of April, came over out of Holland the young Prince of Orange, with a splendid equipage, to make love to his Majesty's eldest daughter, the now Princess Royal.

That evening, was celebrated the pompous funeral of the Duke of Richmond, who was carried in effigy, with all the ensigns of that illustrious family, in an open chariot, in great solemnity, through London to Westminster Abbey.

On the 12th of May, I beheld on Tower-hill the fatal stroke which severed the wisest head in England from the shoulders of the Earl of Strafford, whose crime coming under the cognizance of no human law or statute, a new one was made, not to be a precedent, but his destruction. With what reluctancy the King signed the execution, he has sufficiently expressed; to which he imputes his own unjust suffering—to such exorbitancy were things arrived.

On the 24th of May, I returned to Wotton; and, on the 28th of June, I went to London with my sister, Jane, and the day after sat to one Vanderborcht for my picture in oil, at Arundel-house, whose servant that excellent painter was, brought out of Germany when the Earl returned from Vienna (whither he was sent Ambassador-extraordinary, with great pomp and charge, though with-

\*On the 15th of April Strafford made his eloquent defense, which it seems to have been Evelyn's good fortune to be present at. And here the reader may remark the fact, not without significance, that between the entries on this page of the Diary which relate to Lord Strafford, the young Prince of Orange came over to make love to the Princess Royal, then twelve years old; and that the marriage was subsequently celebrated amid extraordinary Court rejoicings and festivities, in which the King took a prominent part, during the short interval which elapsed between the sentence and execution of the King's great and unfortunate minister.

out any effect, through the artifice of the Jesuited Spaniard who governed all in that conjuncture). With Vanderborcht, the painter, he brought over Winccslaus Hollar, the sculptor, who engraved not only the unhappy Deputy's trial in Westminster-hall, but his decapitation; as he did several other historical things, then relating to the accidents happening during the Rebellion in England, with great skill; besides many cities, towns, and landscapes, not only of this nation, but of foreign parts, and divers portraits of famous persons then in being; and things designed from the best pieces of the rare paintings and masters of which the Earl of Arundel was possessor, purchased and collected in his travels with incredible expense: so as, though Hollar's were but etched in aquafortis, I account the collection to be the most authentic and useful extant. Hollar was the son of a gentleman near Prague, in Bohemia, and my very good friend, perverted at last by the Jesuits at Antwerp to change his religion; a very honest, simple, well-meaning man, who at last came over again into England, where he died. We have the whole history of the king's reign, from his trial in Westminster-hall and before, to the restoration of King Charles II., represented in several sculptures, with that also of Archbishop Laud, by this indefatigable artist; besides innumerable sculptures in the works of Dugdale, Ashmole, and other historical and useful works. I am the more particular upon this for the fruit of that collection, which I wish I had entire.

This picture\* I presented to my sister, being at her request, on my resolution to absent myself from this ill face of things at home, which gave umbrage to wiser than myself that the medal was reversing, and our calamities but yet in their infancy: so that, on the 15th of July, having procured a pass at the Custom-house, where I repeated my oath of allegiance, I went from London to Gravesend, accompanied with one Mr. Caryll, a Surrey gentleman, and our servants, where we arrived by six o'clock that evening, with a purpose to take the first opportunity of a passage for Holland. But the wind as yet not favorable, we had time to view the Block-house of that town, which answered to another over against it

\*His own portrait.

at Tilbury, famous for the rendezvous of Queen Elizabeth, in the year 1588, which we found stored with twenty pieces of cannon, and other ammunition proportionable. On the 19th of July, we made a short excursion to Rochester, and having seen the cathedral went to Chatham to see the Royal Sovereign, a glorious vessel of burden lately built there, being for defense and ornament, the richest that ever spread cloth before the wind. She carried an hundred brass cannon, and was 1,200 tons; a rare sailer, the work of the famous Phineas Pett, inventor of the frigate-fashion of building, to this day practiced. But what is to be deplored as to this vessel is, that it cost his Majesty the affections of his subjects, perverted by the malcontent of great ones, who took occasion to quarrel for his having raised a very slight tax for the building of this, and equipping the rest of the navy, without an act of Parliament; though, by the suffrages of the major part of the Judges the King might legally do in times of imminent danger, of which his Majesty was best apprised. But this not satisfying a jealous party, it was condemned as unprecedented, and not justifiable as to the Royal prerogative; and, accordingly, the Judges were removed out of their places, fined, and imprisoned.\*

We returned again this evening, and on the 21st of July embarked in a Dutch frigate, bound for Flushing, convoyed and accompanied by five other stout vessels, whereof one was a man-of-war. The next day at noon, we landed at Flushing.

Being desirous to overtake the Leagure,† which was then before Genep, ere the summer should be too far spent, we went this evening from Flushing to Middleburg, another fine town in this island, to De Vere, whence the most ancient and illustrious Earls of Oxford derive their family, who have spent so much blood in assisting the state during their wars. From De Vere we passed

\* In such manner Evelyn refers to the tax of Ship-money. But compare this remarkable passage, now first printed from the original, with the tone in which, eight years later, he spoke of the only chance by which monarchy in England might be saved; namely, that of "doing nothing as to government but what shall be approved by the old way of a free parliament, and the known laws of the land."

† The meaning of this expression is, that they should be in time to witness the siege.

over many towns, houses, and ruins of demolished suburbs, etc., which have formerly been swallowed up by the sea; at what time no less than eight of these islands had been irrecoverably lost.

The next day we arrived at Dort, the first town of Holland, furnished with all German commodities, and especially Rhenish wines and timber. It hath almost at the extremity a very spacious and venerable church; a stately senate house, wherein was holden that famous synod against the Arminians in 1618; and in that hall hangeth a picture of "The Passion," an exceeding rare and much-esteemed piece.

From Dort, being desirous to hasten toward the army, I took wagon this afternoon to Rotterdam, whither we were hurried in less than an hour, though it be ten miles distant; so furiously do those Foremen drive. I went first to visit the great church, the Doole, the Boute, and the public statue of the learned Erasmus, of brass. They showed us his house, or rather the mean cottage, wherein he was born, over which there are extant these lines, in capital letters:

ÆDIBUS HIS ORTUS, MUNDUM DECORAVIT ERASMUS ARTIBUS,  
INGENIO, RELIGIONE, FIDE.

The 26th of July I passed by a straight and commodious river through Delft to the Hague; in which journey I observed divers leprous poor creatures dwelling in solitary huts on the brink of the water, and permitted to ask the charity of passengers, which is conveyed to them in a floating box that they cast out.

Arrived at the Hague, I went first to the Queen of Bohemia's court, where I had the honor to kiss her Majesty's hand, and several of the Princesses', her daughters. Prince Maurice was also there, newly come out of Germany; and my Lord Finch, not long before fled out of England from the fury of the Parliament. It was a fasting day with the Queen for the unfortunate death of her husband, and the presence chamber had been hung with black velvet ever since his decease.

The 28th of July I went to Leyden; and the 29th to Utrecht, being thirty English miles distant (as they reckon by hours). It was now Kermas, or a fair, in this

town, the streets swarming with boors and such, that early the next morning, having visited the Bishop's court, and the two famous churches, and my curiosity till my return, and better leisure, came to Rynen, where the Queen of Bohemia had a fine and well built palace, or country house, attended in the manner, as I remember; and so, crossing the river, which this villa is situated, lodged that night in a man's house. The 31st to Nimeguen; and on the 1st of August we arrived at the Leagueure, where the whole army encamped about Genep, a very fine town situated on the river Waal; but, being taken five days before, we had only a sight of the ruins and tions. The next Sunday was the thanksgiving performed in Colonel Goring's regiment (formerly the since Earl of Norwich) by Mr. Goffe, formerly a minister (now turned Roman, and father-confessor to his mother). The evening was spent in firing, and other expressions of military triumphs.

Now, according to the compliment, I was made a volunteer in the company of Captain Appleton, and Captain-lieutenant, Honywood (Apsley being killed) received many civilities.

The 3d of August, at night, we rode about the circumvallation, the general being then in the city. The next day I was accommodated with a very commodious tent for my lodging; as before I had a horse, which I had at command, and a hut where, in the excessive heats was a great convenience; but, the piercing the canvas of the tent, it was during the day unsufferable, and at night not seldom infected with fogs, which ascended from the river.

6th August, 1641. As the turn came about, we were ordered to watch on a horn-work near our quarters, and to trail a pike, being the next morning relieved by the company of French. This was our continual duty till the 10th, when we were reformed, and all danger of quitting that place cured; whence I went to see a Convent of Franciscan monks, not far from our quarters, where we found both the church and refectory full, crowded with the goods of the people as at the approach of the army had fled thither for sanctuary. On the day following, I had a view all the trenches, approaches, and mines, and

besiegers; and, in particular, I took special notice of the wheel-bridge, which engine his Excellency had made to run over the moat when they stormed the castle; as it is since described (with all the other particulars of this siege) by the author of that incomparable work, "*Hollandia Illustrata*." The walls and ramparts of earth, which a mine had broken and crumbled, were of prodigious thickness.

Upon the 8th of August, I dined in the horse-quarters with Sir Robert Stone and his lady, Sir William Stradling, and divers Cavaliers; where there was very good cheer, but hot service for a young drinker, as then I was; so that, being pretty well satisfied with the confusion of armies and sieges (if such that of the United Provinces may be called, where their quarters and encampments are so admirably regular, and orders so exactly observed, as few cities, the best governed in time of peace, exceed it for all conveniences), I took my leave of the Leagure and Camerades; and, on the 12th of August, I embarked on the "*Waal*," in company with three grave divines, who entertained us a great part of our passage with a long dispute concerning the lawfulness of church-music. We now sailed by Teil, where we landed some of our freight; and about five o'clock we touched at a pretty town named Bommell, that had divers English in garrison. It stands upon Contribution-land, which subjects the environs to the Spanish incursions. We sailed also by an exceeding strong fort called Lovestein, famous for the escape of the learned Hugo Grotius, who, being in durance as a capital offender, as was the unhappy Barneveldt, by the stratagem of his lady, was conveyed in a trunk supposed to be filled with books only. We lay at Gorcum, a very strong and considerable frontier.

13th August, 1641. We arrived late at Rotterdam, where was their annual mart or fair, so furnished with pictures (especially landscapes and drolleries, as they call those clownish representations), that I was amazed. Some of these I bought and sent into England. The reason of this store of pictures, and their cheapness, proceeds from their want of land to employ their stock, so that it is an ordinary thing to find a common farmer lay out two or three thousand pounds in this commodity. Their houses are full of them, and they vend them at their fairs to very great gains. Here I first saw an elephant, who was

town, the streets swarming with foot and horse, so that early the next morning, having visited the ancient Bishop's court, and the two famous churches, I satisfied my curiosity till my return, and better to-morrow. We then came to Rynen, where the Queen of Bohemia had a small and well built palace, or country house, after the Dutch manner, as I remember; and so, crossing the Rhine, upon which this villa is situated, lodged that night in a soldier's man's house. The 2d to Nimeguen; and on the 3d of August we arrived at the Isère river, where a vast host of the whole army encamped about 6 o'clock, a.m. There was the situated on the river West; but, being taken about five days before, we had only a sight of the demonstrations. The next Sunday was the third, being a day performed in Colonel Gwynne's regiment, which was the since Earl of Newcastle by Mr. Gwynne, but a captain (now turned Roman, and father of a son to the same mother). The evening was spent in literary exercises and other expressions of military triumph.

Now, according to the complement, I was accepted as a volunteer in the company of Captain Agnew, at which Captain-lieutenant, Honywood (Agnew's brother) I received many civilities.

The 3d of August, at night, we were subjected to the storm and circumnavigation, the powder being blown in the field. The next day I was accommodated with a very good and commodious tent for my lodging; and so soon I was mounted a horse, which I had at command, and so forth. But the excessive heat was a great inconvenience, and the excessive piercing the canvas of the tent, all were observing this as insufferable, and at night such a deluge and heat with rain and fogs, which ascended from the ground.

6th August, 1694. At this time a great storm, and we were ordered to watch on a hill, and so forth. And so forth, trail a pike, being the most numerous in the world for a company of French. This was a circumstance which the French was reformed, and all things of great importance were cured; whence I went to the station of the French, and so forth, not far from our quarters, where we found the kitchen full and refectory full, crowded with the people and the people as at the approach of the army had fled with them thither for sanctuary. On the day following, I went to view all the trenches, approaches, and mines, etc. of the

besiegers; and, in particular, I took special notice of the wheel-bridge, which engine his Excellency had made to run over the moat when they stormed the castle; as it is since described (with all the other particulars of this siege) by the author of that incomparable work, "*Hollandia Illustrata*." The walls and ramparts of earth, which a mine had broken and crumbled, were of prodigious thickness.

Upon the 8th of August, I dined in the horse-quarters with Sir Robert Stone and his lady, Sir William Stradling, and divers Cavaliers; where there was very good cheer, but hot service for a young drinker, as then I was; so that, being pretty well satisfied with the confusion of armies and sieges (if such that of the United Provinces may be called, where their quarters and encampments are so admirably regular, and orders so exactly observed, as few cities, the best governed in time of peace, exceed it for all conveniences), I took my leave of the Leagure and Camerades; and, on the 12th of August, I embarked on the "*Waal*," in company with three grave divines, who entertained us a great part of our passage with a long dispute concerning the lawfulness of church-music. We now sailed by *Teil*, where we landed some of our freight; and about five o'clock we touched at a pretty town named *Bommell*, that had divers English in garrison. It stands upon *Contribution-land*, which subjects the environs to the Spanish incursions. We sailed also by an exceeding strong fort called *Lovestein*, famous for the escape of the learned *Hugo Grotius*, who, being in durance as a capital offender, as was the unhappy *Barneveldt*, by the stratagem of his lady, was conveyed in a trunk supposed to be filled with books only. We lay at *Gorcum*, a very strong and considerable frontier.

13th August, 1641. We arrived late at *Rotterdam*, where was their annual mart or fair, so furnished with pictures (especially landscapes and drolleries, as they call those clownish representations), that I was amazed. Some of these I bought and sent into England. The reason of this store of pictures, and their cheapness, proceeds from their want of land to employ their stock, so that it is an ordinary thing to find a common farmer lay out two or three thousand pounds in this commodity. Their houses are full of them, and they vend them at their fairs to very great gains. Here I first saw an elephant, who was

shops. Next day (the 20th) I returned to Delft, thence to Rotterdam, the Hague, and Leyden, where immediately I mounted a wagon, which that night, late as it was, brought us to Haerlem. About seven in the morning after I came to Amsterdam, where being provided with a lodging, the first thing I went to see was a Synagogue of the Jews (being Saturday), whose ceremonies, ornaments, lamps, law, and schools, afforded matter for my contemplation. The women were secluded from the men, being seated in galleries above, shut with lattices, having their heads muffled with linen, after a fantastical and somewhat extraordinary fashion; the men, wearing a large calico mantle, yellow colored, over their hats, all the while waving their bodies, while at their devotions. From thence, I went to a place without the town, called Overkirk, where they have a spacious field assigned them to bury their dead, full of sepulchers with Hebraic inscriptions, some of them stately and costly. Looking through one of these monuments, where the stones were disjointed, I perceived divers books and papers lie about a corpse; for it seems, when any learned Rabbi dies, they bury some of his books with him. With the help of a stick, I raked out several, written in Hebrew characters, but much impaired. As we returned, we stepped in to see the Spin-house, a kind of bridewell, where incorrigible and lewd women are kept in discipline and labor, but all neat. We were shown an hospital for poor travelers and pilgrims, built by Queen Elizabeth of England; and another maintained by the city.

The State or Senate-house of this town, if the design be perfected, will be one of the most costly and magnificent pieces of architecture in Europe, especially for the materials and the carvings. In the Doole is painted, on a very large table, the bust of Marie de Medicis, supported by four royal diadems, the work of one Vanderdall, who hath set his name thereon, 1st September, 1638.

On Sunday, I heard an English sermon at the Presbyterian congregation, where they had chalked upon a slate the psalms that were to be sung, so that all the congregation might see them without the bidding of a clerk. I was told, that after such an age no minister was permitted to preach, but had his maintenance continued during life.

I purposely changed my lodgings, being desirous to converse with the sectaries that swarmed in this city, out of whose spawn came those almost innumerable broods in England afterward. It was at a Brownist's house, where we had an extraordinary good table. There was in pension with us my Lord Keeper, Finch, and one Sir J. Fotherbee. Here I also found an English Carmelite, who was going through Germany with an Irish gentleman. I now went to see the Weese-house, a foundation like our Charter-house, for the education of decayed persons, orphans, and poor children, where they are taught several occupations. The girls are so well brought up to housewifery, that men of good worth, who seek that chiefly in a woman, frequently take their wives from this hospital. Thence to the Rasp-house, where the lusty knaves are compelled to work; and the rasping of brasil and logwood for the dyers is very hard labor. To the Dool-house, for madmen and fools. But none did I so much admire, as an Hospital for their lame and decrepit soldiers and seamen, where the accommodations are very great, the building answerable; and, indeed, for the like public charities the provisions are admirable in this country, where, as no idle vagabonds are suffered (as in England they are), there is hardly a child of four or five years old, but they find some employment for it.

It was on a Sunday morning that I went to the Bourse, or Exchange, after their sermons were ended, to see the Dog-market, which lasts till two in the afternoon, in this place of convention of merchants from all parts of the world. The building is not comparable to that of London, built by that worthy citizen, Sir Thomas Gresham, yet in one respect exceeding it, that vessels of considerable burden ride at the very quay contiguous to it; and indeed it is by extraordinary industry that as well this city, as generally all the towns of Holland, are so accommodated with graffs, cuts, sluices, moles, and rivers, made by hand, that nothing is more frequent than to see a whole navy, belonging to this mercantile people, riding at anchor before their very doors: and yet their streets even, straight, and well paved, the houses so uniform and planted with lime trees, as nothing can be more beautiful.

The next day we were entertained at a kind of tavern,

called the Briloft, appertaining to a rich Anabaptist, where, in the upper rooms of the house, were divers pretty waterworks, rising 108 feet from the ground. There were many quaint devices, fountains, artificial music, noises of beasts, and chirping of birds; but what pleased me most was a large pendant candlestick, branching into several sockets, furnished all with ordinary candles to appearance, out of the wicks spouting out streams of water, instead of flames. This seemed then and was a rarity, before the philosophy of compressed air made it intelligible. There was likewise a cylinder that entertained the company with a variety of chimes, the hammers striking upon the brims of porcelain dishes, suited to the tones and notes, without cracking any of them. Many other waterworks were shown.

The Kaiser's or Emperor's Graft, which is an ample and long street, appearing like a city in a forest; the lime trees planted just before each house, and at the margin of that goodly aqueduct so curiously wharfed with Klinkard brick, which likewise paves the streets, than which nothing can be more useful and neat. This part of Amsterdam is built and gained upon the main sea, supported by piles at an immense charge, and fitted for the most busy concourse of traffickers and people of commerce beyond any place, or mart, in the world. Nor must I forget the port of entrance into an heave of this town, composed of very magnificent pieces of architecture, some of the ancient and best manner, as are divers churches.

The turrets, or steeples, are adorned after a particular manner and invention; the chimes of bells are so rarely managed, that being curious to know whether the motion was from any engine, I went up to that of St. Nicholas, where I found one who played all sorts of compositions from the tablature before him, as if he had fingered an organ; for so were the hammers fastened with wires to several keys put into a frame twenty feet below the bells, upon which (by the help of a wooden instrument, not much unlike a weaver's shuttle, that guarded his hand) he struck on the keys and played to admiration. All this while, through the clattering of the wires, din of the too nearly sounding bells, and noise that his wooden gloves made, the confusion was so great, that it was impossible for the musician, or any that stood near him, to hear

anything at all; yet, to those at a distance, and especially in the streets, the harmony and the time were the most exact and agreeable.

The south church is richly paved with black and white marble,—the west is a new fabric; and generally all the churches in Holland are furnished with organs, lamps, and monuments, carefully preserved from the fury and impiety of popular reformers, whose zeal has foolishly transported them in other places rather to act like madmen than religious.

Upon St. Bartholomew's day, I went among the book-sellers, and visited the famous Hondius and Bleaw's shop, to buy some maps, atlases, and other works of that kind. At another shop, I furnished myself with some shells and Indian curiosities; and so, toward the end of August, I returned again to Haerlem by the river, ten miles in length, straight as a line, and of competent breadth for ships to sail by one another. They showed us a cottage where, they told us, dwelt a woman who had been married to her twenty-fifth husband, and being now a widow, was prohibited to marry in future; yet it could not be proved that she had ever made away with any of her husbands, though the suspicion had brought her divers times to trouble.

Haerlem is a very delicate town and hath one of the fairest churches of the Gothic design I had ever seen. There hang in the steeple, which is very high, two silver bells, said to have been brought from Damietta, in Egypt, by an earl of Holland, in memory of whose success they are rung out every evening. In the nave hang the goodliest branches of brass for tapers that I have seen, esteemed of great value for the curiosity of the workmanship; also a fair pair of organs, which I could not find they made use of in divine service, or so much as to assist them in singing psalms, but only for show, and to recreate the people before and after their devotions, while the burgomasters were walking and conferring about their affairs. Near the west window hang two models of ships, completely equipped, in memory of that invention of saws under their keels, with which they cut through the chain of booms, which barred the port of Damietta. Having visited this church, the fish-market, and made some inquiry about the printing-house, the invention whereof is said to have been in this town, I returned to Leyden.

At Leyden, I was carried up to the castle, or Pyrgus, built on a very steep artificial mount, cast up (as reported) by Hengist the Saxon, on his return out of England, as a place to retire to, in case of any sudden inundations.

The churches are many and fair; in one of them lies buried the learned and illustrious Joseph Scaliger, without any extraordinary inscription, who, having left the world a monument of his worth more lasting than marble, needed nothing more than his own name; which I think is all engraven on his sepulcher. He left his library to this University.

28th August, 1641. I went to see the college and schools, which are nothing extraordinary, and was complimented with a *matricula* by the *magnificus* Professor, who first in Latin demanded of me where my lodging in the town was, my name, age, birth, and to what Faculty I addicted myself; then, recording my answers in a book, he administered an oath to me that I should observe the statutes and orders of the University while I stayed, and then delivered me a ticket, by virtue whereof I was made excise-free; for all which worthy privileges, and the pains of writing, he accepted of a rix-dollar.

Here was now the famous Dan. Heinsius, whom I so longed to see, as well as the no less famous printer, Elzevir's printing-house and shop, renowned for the politeness of the character and editions of what he has published through Europe. Hence to the physic-garden, well stored with exotic plants, if the catalogue presented to me by the gardener be a faithful register.

But, among all the rarities of this place, I was much pleased with a sight of their anatomy-school, theater, and repository adjoining, which is well furnished with natural curiosities; skeletons, from the whale and elephant to the fly and spider; which last is a very delicate piece of art, to see how the bones (if I may so call them of so tender an insect) could be separated from the mucilaginous parts of that minute animal. Among a great variety of other things, I was shown the knife newly taken out of a drunken Dutchman's guts, by an incision in his side, after it had slipped from his fingers into his stomach. The pictures of the surgeon and his patient, both living, were there.

There is without the town a fair Mall, curiously planted.

Returning to my lodging, I was showed the statue, cut in stone, of the happy monk, whom they report to have been the first inventor of typography, set over the door; but this is much controverted by others, who strive for the glory of it, besides John Gutenberg.

I was brought acquainted with a Burgundian Jew, who had married an apostate Kentish woman. I asked him divers questions: he told me, among other things, that the World should never end; that our souls transmigrated, and that even those of the most holy persons did penance in the bodies of brutes after death,—and so he interpreted the banishment and savage life of Nebuchadnezzar: that all the Jews should rise again, and be led to Jerusalem; that the Romans only were the occasion of our Savior's death, whom he affirmed (as the 'Turks do) to be a great prophet, but not the Messiah. He showed me several books of their devotion, which he had translated into English, for the instruction of his wife; he told me that when the Messiah came, all the ships, barks, and vessels of Holland should, by the power of certain strange whirlwinds, be loosed from their anchors, and transported in a moment to all the desolate ports and havens throughout the world, wherever the dispersion was, to convey their brethren and tribes to the Holy City; with other such like stuff. He was a merry drunken fellow, but would by no means handle any money (for something I purchased of him), it being Saturday; but desired me to leave it in the window, meaning to receive it on Sunday morning.

1st September, 1641. I went to Delft and Rotterdam, and two days after back to the Hague, to bespeak a suit of horseman's armor, which I caused to be made to fit me. I now rode out of town to see the monument of the woman, pretended to have been a countess of Holland, reported to have had as many children at one birth, as there are days in the year. The basins were hung up in which they were baptized, together with a large description of the matter-of-fact in a frame of carved work, in the church of Lysdun, a desolate place. As I returned, I diverted to see one of the Prince's Palaces, called the Hoff Van Hounsler's Dyck, a very fair cloistered and

quadrangular building. The gallery is prettily painted with several huntings, and at one end a gordian knot, with rustical instruments so artificially represented, as to deceive an accurate eye to distinguish it from actual relieve. The ceiling of the staircase is painted with the "Rape of Ganymede," and other pendant figures, the work of F. Covenberg, of whose hand I bought an excellent drollery, which I afterward parted with to my brother George of Wotton, where it now hangs. To this palace join a fair garden and park, curiously planted with limes.

8th September, 1641. Returned to Rotterdam, through Delftshaven and Sedan, where were at that time Colonel Goring's winter quarters. This town has heretofore been very much talked of for witches.

10th September, 1641. I took a wagon for Dort, to be present at the reception of the Queen-mother, Marie de Medicis, Dowager of France, widow of Henry the Great, and mother to the French King, Louis XIII., and the Queen of England, whence she newly arrived, tossed to and fro by the various fortune of her life. From this city, she designed for Cologne, conducted by the Earl of Arundel and the Herr Van Bredrod. At this interview, I saw the Princess of Orange, and the lady her daughter, afterward married to the House of Brandenburg. There was little remarkable in this reception befitting the greatness of her person; but an universal discontent, which accompanied that unlucky woman wherever she went.

12th September, 1641. I went toward Bois-le-Duc, where we arrived on the 16th, at the time when the new citadel was advancing, with innumerable hands, and incomparable inventions for draining off the waters out of the fens and morasses about it, being by buckets, mills, cochleas, pumps, and the like; in which the Hollanders are the most expert in Europe. Here were now sixteen companies and nine troops of horse. They were also cutting a new river, to pass from the town to a castle not far from it. Here we split our skiff, falling foul upon another through negligence of the master, who was fain to run aground, to our no little hazard. At our arrival, a soldier conveyed us to the Governor, where our names were taken, and our persons examined very strictly.

---

17th September, 1641. I was permitted to walk the round and view the works, and to visit a convent of religious women of the order of St. Clara (who by the capitulation were allowed to enjoy their monastery and maintenance undisturbed, at the surrender of the town twelve years since), where we had a collation and very civil entertainment. They had a neat chapel, in which the heart of the Duke of Cleves, their founder, lies inhumed under a plate of brass. Within the cloister is a garden, and in the middle of it an overgrown lime tree, out of whose stem, near the root, issue five upright and exceeding tall suckers, or bolls, the like whereof for evenness and height I had not observed.

The chief church of this city is curiously carved within and without, furnished with a pair of organs, and a most magnificent font of copper.

18th September, 1641. I went to see that most impregnable town and fort of Hysdune, where I was exceedingly obliged to one Colonel Crombe, the lieutenant-governor, who would needs make me accept the honor of being captain of the watch, and to give the word this night. The fortification is very irregular, but esteemed one of the most considerable for strength and situation in the Netherlands. We departed toward Goreum. Here Sir Kenelm Digby, traveling toward Cologne, met us.

The next morning, the 19th, we arrived at Dort, passing by the Decoys, where they catch innumerable quantities of fowl.

22d September, 1641. I went again to Rotterdam to receive a pass which I expected from Brussels, securing me through Brabant and Flanders, designing to go into England through those countries. The Cardinal Infante, brother to the King of Spain, was then governor. By this pass, having obtained another from the Prince of Orange, upon the 24th of September I departed through Dort; but met with very bad tempestuous weather, being several times driven back, and obliged to lie at anchor off Keede, other vessels lying there waiting better weather. The 25th and 26th we made other essays; but were again repulsed to the harbor, where lay sixty vessels waiting to sail. But, on the 27th, we, impatient of the time and inhospitableness of the place, sailed again with a contrary and impetuous wind and a terrible sea, in

great jeopardy; for we had much ado to keep ourselves above water, the billows breaking desperately on our vessel: we were driven into Williamstadt, a place garrisoned by the English, where the governor had a fair house. The works, and especially the counterscarp, are curiously hedged with quick, and planted with a stately row of limes on the rampart. The church is of a round structure, with a cupola, and the town belongs entirely to the Prince of Orange, as does that of Breda, and some other places.

28th September, 1641. Failing of an appointment, I was constrained to return to Dort for a bill of exchange; but it was the 1st of October ere I could get back. At Keele, I numbered 141 vessels, who durst not yet venture out; but, animated by the master of a stout bark, after a small encounter of weather, we arrived by four that evening at Steenberg. In the passage we sailed over a sea called the Plaats, an exceeding dangerous water, by reason of two contrary tides which meet there very impetuously. Here, because of the many shelves, we were forced to tide it along the Channel; but, ere we could gain the place, the ebb was so far spent, that we were compelled to foot it at least two long miles, through a most pelting shower of rain.

2d October, 1641. With a gentleman of the Rhyngaves, I went in a cart, or tumbrel (for it was no better; no other accommodation could be procured), of two wheels and one horse, to Bergen-op-Zoom, meeting by the way divers parties of his Highness's army now retiring toward their 'winter quarters; the convoy skiffs riding by thousands along the harbor. The fort was heretofore built by the English.

The next morning I embarked for Lillo, having refused a convoy of horse which was offered me. The tide being against us, we landed short of the fort on the beach, where we marched half leg deep in mud, ere we could gain the dyke, which, being five or six miles from Lillo, we were forced to walk on foot very wet and discomposed; and then entering a boat we passed the ferry, and came to the castle. Being taken before the Governor, he demanded my pass, to which he set his hand, and asked two rix-dollars for a fee, which methought appeared very exorbitant in a soldier of his quality. I told him that I had

already purchased my pass of the commissaries at Rotterdam; at which, in a great fury, snatching the paper out of my hand, he flung it scornfully under the table, and bade me try whether I could get to Antwerp without his permission: but I had no sooner given him the dollars, then he returned the passport surlily enough, and made me pay fourteen Dutch shillings to the cantone, or searcher, for my contempt, which I was glad to do for fear of further trouble, should he have discovered my Spanish pass, in which the States were therein treated by the name of rebels. Besides all these exactions, I gave the commissary six shillings, to the soldiers something, and, ere perfectly clear of this frontier, thirty-one stivers to the man-of-war, who lay blocking up the river between Lillo and the opposite sconce called Lifkinshoeck.

4th October, 1641. We sailed by several Spanish forts, out of one of which, St. Mary's port, came a Don on board us, to whom I showed my Spanish pass, which he signed, and civilly dismissed us. Hence, sailing by another man-of-war, to which we lowered our topsails, we at length arrived at Antwerp.

The lodgings here are very handsome and convenient. I lost little time; but, with the aid of one Mr. Lewkner, our conductor, we visited divers churches, colleges, and monasteries. The Church of the Jesuits is most sumptuous and magnificent; a glorious fabric without and within, wholly incrustated with marble, inlaid and polished into divers representations of histories, landscapes, and flowers. On the high altar is placed the statue of the Blessed Virgin and our Savior in white marble, with a boss in the girdle set with very fair and rich sapphires, and divers other stones of price. The choir is a glorious piece of architecture: the pulpit supported by four angels, and adorned with other carvings, and rare pictures by Rubens, now lately dead, and divers votive tables and relics. Hence, to the Vroù Kirk, or Nôtre Dame of Antwerp: it is a very venerable fabric, built after the Gothic manner, especially the tower, which I ascended, the better to take a view of the country adjacent; which, happening on a day when the sun shone exceedingly bright, and darted his rays without any interruption, afforded so bright a reflection to us who were above, and had a full prospect of both land and water about it, that I was much confirmed

in my opinion of the moon's being of some such substance as this earthly globe: perceiving all the subjacent country, at so small an horizontal distance, to repercuss such a light as I could hardly look against, save where the river, and other large water within our view, appeared of a more dark and uniform color; resembling those spots in the moon supposed to be seas there, according to Hevelius, and as they appear in our late telescopes. I numbered in this church thirty privileged altars, that of St. Sebastian adorned with a painting of his martyrdom.

We went to see the Jerusalem Church, affirmed to have been founded by one who, upon divers great wagers, passed to and fro between that city and Antwerp, on foot, by which he procured large sums of money, which he bestowed on this pious structure.\* Hence, to St. Mary's Chapel, where I had some conference with two English Jesuits, confessors to Colonel Jaye's regiment. These fathers conducted us to the Cloister of Nuns, where we heard a Dutch sermon upon the exposure of the Host. The Senate-house of this city is a very spacious and magnificent building.

5th October, 1641. I visited the Jesuits' School, which, for the fame of their method, I greatly desired to see. They were divided into four classes, with several inscriptions over each; as, first, *Ad majorem Dei gloriam*; over the second, *Princeps diligentie*; the third, *Imperator Byzantium*; over the fourth and uppermost, *Imperator Romanorum*. Under these, the scholars and pupils and their places, or forms with titles and priority according to their proficiency. Their dormitory and lodgings above were exceedingly neat. They have a prison for the offenders and less diligent; and, in an ample court, to recreate themselves in, is an aviary, and a yard, where eagles, vultures, foxes, monkeys, and other animals are kept, to divert the boys withal at their hours of remission. To this school join the music and mathematical schools, and lastly a pretty, neat chapel. The great street is built after the Italian mode, in the middle whereof is erected a glorious crucifix of white and black marble, greater than the life. This is a very fair and noble street, clean, well paved, and sweet to admiration.

\*This notice, alipped by accident into the entries which refer to Antwerp, belongs to those of Bruges.

The Oesters house, belonging to the East India Company, is a stately palace, adorned with more than 300 windows. From hence, walking into the Gun-garden, I was allowed to see as much of the citadel as is permitted to strangers. It is a matchless piece of modern fortification, accommodated with lodgments for the soldiers and magazines. The graffs, ramparts, and platforms are stupendous. Returning by the shop of Plantine, I bought some books, for the namesake only of that famous printer

But there was nothing about this city which more ravished me than those delicious shades and walks of stately trees, which render the fortified works of the town one of the sweetest places in Europe; nor did I ever observe a more quiet, clean, elegantly built and civil place, than this magnificent and famous city of Antwerp. In the evening, I was invited to Signor Duarte's, a Portuguese by nation, an exceeding rich merchant, whose palace I found to be furnished like a prince's. His three daughters entertained us with rare music, vocal and instrumental, which was finished with a handsome collation. I took leave of the ladies and of sweet Antwerp, as late as it was, embarking for Brussels on the Scheldt in a vessel, which delivered us to a second boat (in another river) drawn or towed by horses. In this passage, we frequently changed our barge, by reason of the bridges thwarting our course. Here I observed numerous families inhabiting their vessels and floating dwellings, so built and divided by cabins, as few houses on land enjoyed better accommodation; stored with all sorts of utensils, neat chambers, a pretty parlor, and kept so sweet, that nothing could be more refreshing. The rivers on which they are drawn are very clear and still waters, and pass through a most pleasant country on both the banks. We had in our boat a very good ordinary, and excellent company. The cut is straight as a line for twenty English miles. What I much admired was, near the midway, another artificial river, which intersects this at right angles, but on an eminence of ground, and is carried in an aqueduct of stone so far above the other as that the waters neither mingle, nor hinder one another's passage. We came to a town called Villefrow, where all the passengers went on shore to wash at a fountain issuing

out of a pillar, and then came aboard again. On the margin of this long tract are abundance of shrines and images, defended from the injuries of the weather by niches of stone wherein they are placed.

7th October, 1641. We arrived at Brussels at nine in the morning. The Stadt-house, near the market place, is, for the carving in freestone, a most laborious and finished piece, well worthy observation. The flesh-shambles are also built of stone. I was pleased with certain small engines, by which a girl, or boy, was able to draw up, or let down, great bridges, which in divers parts of this city crossed the channel for the benefit of passengers. The walls of this town are very entire, and full of towers at competent distances. The cathedral is built upon a very high and exceeding steep ascent, to which we mounted by fair steps of stone. Hence I walked to a convent of English Nuns, with whom I sat discoursing most part of the afternoon.

8th October, 1641. Being the morning I came away, I went to see the Prince's Court, an ancient, confused building, not much unlike the Hoft, at the Hague: there is here likewise a very large hall, where they vend all sorts of wares. Through this we passed by the chapel, which is indeed rarely arched, and in the middle of it was the hearse, or catafalque, of the late Archduchess, the wise and pious Clara Eugenia. Out of this we were conducted to the lodgings, tapestried with incomparable arras, and adorned with many excellent pieces of Rubens, old and young Breugel, Titian, and Stenwick, with stories of most of the late actions in the Netherlands.

By an accident we could not see the library. There is a fair terrace which looks to the vineyard, in which, on pedestals, are fixed the statues of all the Spanish kings of the house of Austria. The opposite walls are painted by Rubens, being an history of the late tumults in Belgia; in the last piece, the Archduchess shuts a great pair of gates upon Mars, who is coming out of hell, armed, and in a menacing posture; which, with that other of the Infanta taking leave of Don Philip IV., is a most incomparable table.

From hence, we walked into the park, which for being entirely within the walls of the city is particularly remarkable: nor is it less pleasant than if in the most

solitary recesses; so naturally is it furnished with whatever may render it agreeable, melancholy, and country-like. Here is a stately heronry, divers springs of water, artificial cascades, rocks, grotts; one whereof is composed of the extravagant roots of trees, cunningly built and hung together with wies. In this park are both fallow and red deer.

From hence, we were led into the Menage, and out of that into a most sweet and delicious garden, where was another grot of more neat and costly materials, full of noble statues, and entertaining us with artificial music; but the hedge of water, in form of lattice-work, which the fountaineer caused to ascend out of the earth by degrees, exceedingly pleased and surprised me; for thus, with a pervious wall, or rather a palisade hedge of water, was the whole parterre environed.

There is likewise a fair aviary; and in the court next it are kept divers sorts of animals, rare and exotic fowl, as eagles, cranes, storks, bustards, pheasants of several kinds, and a duck having four wings. In another division of the same close are rabbits of an almost perfect yellow color.

There was no Court now in the palace; the Infante Cardinal, who was the Governor of Flanders, being dead but newly, and every one in deep mourning.

At near eleven o'clock, I repaired to his Majesty's agent, Sir Henry de Vic, who very courteously received me, and accommodated me with a coach and six horses, which carried me from Brussels to Ghent, where it was to meet my Lord of Arundel, Earl Marshal of England, who had requested me when I was at Antwerp to send it for him, if I went not thither myself.

Thus taking leave of Brussels and a sad Court, yet full of gallant persons (for in this small city, the acquaintance being universal, ladies and gentlemen, I perceived had great diversions, and frequent meetings), I hastened toward Ghent. On the way, I met with divers little wagons, prettily contrived, and full of peddling merchandise, drawn by mastiff dogs, harnessed completely like so many coach horses; in some four, in others six, as in Brussels itself I had observed. In Antwerp I saw, as I remember, four dogs draw five lusty children in a chariot: the master commands them whither he pleases, crying his wares.

about the streets. After passing through Ouse, by six in the evening, I arrived at Ghent. This is a city of so great a circumference, that it is reported to be seven leagues round; but there is not half of it now built, much of it remaining in fields and desolate pastures even within the walls, which have strong gates toward the west, and two fair churches.

Here I beheld the palace wherein John of Gaunt and Charles V. were born; whose statue\* stands in the market-place, upon a high pillar, with his sword drawn, to which (as I was told) the magistrates and burghers were wont to repair upon a certain day every year with ropes about their necks, in token of submission and penance for an old rebellion of theirs; but now the hemp is changed into a blue ribbon. Here is planted the basilisco, or great gun, so much talked of. The Lys and the Scheldt meeting in this vast city, divide it into twenty-six islands, which are united by many bridges, somewhat resembling Venice. This night I supped with the Abbot of Andoyne, a pleasant and courteous priest.

8th October, 1641. I passed by a boat to Bruges, taking in at a redoubt a convoy of fourteen musketeers, because the other side of the river, being Contribution-land, was subject to the mroads and depredations of the bordering States. This river was cut by the famous Marquis Spínola, and is in my judgment a wonderful piece of labor, and a worthy public work, being in some places forced through the main rock, to an incredible depth, for thirty miles. At the end of each mile is built a small redoubt, which communicates a line to the next, and so the whole way, from whence we received many volleys of shot, in compliment to my Lord Marshal, who was in our vessel, a passenger with us. At five that evening, we were met by the magistrates of Bruges, who came out to convey my Lord to his lodgings, at whose cost he was entertained that night.

The morning after we went to see the Stadt-house and adjoining aqueduct, the church, and market-place, where we saw cheeses and butter piled up in heaps; also the fortifications and gratts, which are extremely large.

The 9th, we arrived at Ostend by a straight and artificial river. Here, with leave of the captain of the watch,

\* That of Charles V.

I was carried to survey the river and harbor, with fortifications on one side thereof: the east and south are mud and earth walls. It is a very strong place, and lately stood a memorable siege three years, three months, three weeks, and three days. I went to see the church of St. Peter, and the cloisters of the Franciscans.

10th October, 1641. I went by wagon, accompanied with a jovial commissary, to Dunkirk, the journey being made all on the sea sands. On our arrival, we first viewed the court of guards, the works, the townhouse, and the new church; the latter is very beautiful within; and another, wherein they showed us an excellent piece of "Our Savior's Bearing the Cross." The harbor, in two channels, coming up to the town, was choked with a multitude of prizes.

From hence, the next day, I marched three English miles toward the packet boat, being a pretty frigate of six guns, which embarked us for England about three in the afternoon.

At our going off, the fort, against which our pinnace anchored saluted my Lord Marshal with twelve great guns, which we answered with three. Not having the wind favorable, we anchored that night before Calais. About midnight, we weighed; and, at four in the morning, though not far from Dover, we could not make the pier till four that afternoon, the wind proving contrary and driving us westward: but at last we got on shore, October the 12th.

From Dover, I that night rode post to Canterbury. Here I visited the cathedral, then in great splendor; those famous windows being entire, since demolished by the fanatics. The next morning by Sittingbourne, I came to Rochester, and thence to Gravesend, where a light-horseman (as they call it) taking us in, we spent our tide as far as Greenwich. From hence, after we had a little refreshed ourselves at the College (for by reason of contagion then in London we balked the inns), we came to London, landing at Arundel stairs. Here I took leave of his Lordship, and retired to my lodgings in the Middle Temple, being about two in the morning, the 14th of October.

16th October, 1641. I went to see my brother at Wotton. On the 31st of that month (unfortunate for the

Irish Rebellion, which broke out on the 23d), I was one and twenty years of age.

7th November, 1641. After receiving the Sacrament at Wotton church, I visited my Lord Marshal at Albury.

23d November, 1641. I returned to London; and, on the 25th, saw his Majesty ride through the City after his coming out of Scotland, and a Peace proclaimed, with great acclamations and joy of the giddy people.

15th December, 1641. I was elected one of the Comp-trollers of the Middle Temple revellers, as the fashion of the young students and gentlemen was, the Christmas being kept this year with great solemnity; but, being desirous to pass it in the country, I got leave to resign my staff of office, and went with my brother Richard to Wotton.

10th January, 1642. I gave a visit to my cousin Hatton, of Ditton.

19th January, 1642. I went to London, where I stayed till 5th of March, studying a little, but dancing and fooling more.

3d October, 1642. To Chichester, and hence the next day to see the siege of Portsmouth; for now was that bloody difference between the King and Parliament broken out, which ended in the fatal tragedy so many years after. It was on the day of its being rendered to Sir William Waller; which gave me an opportunity of taking my leave of Colonel Goring, the governor, now embarking for France. This day was fought that signal battle at Edgehill. Thence I went to Southampton and Winchester, where I visited the castle, school, church, and King Arthur's Round Table; but especially the church, and its Saxon kings' monuments, which I esteemed a worthy antiquity.

The 12th of November was the battle of Brentford, surprisingly fought; and to the great consternation of the City, had his Majesty (as it was believed he would) pursued his advantage. I came in with my horse and arms just at the retreat; but was not permitted to stay longer than the 15th, by reason of the army marching to Gloucester; which would have left both me and my brothers exposed to ruin, without any advantage to his Majesty.

7th December, 1642. I went from Wotton to London,

to see the so much celebrated line of communication, and on the 10th returned to Wotton, nobody knowing of my having been in his Majesty's army.

10th March, 1643. I went to Hartingford-berry to visit my cousin, Keightly.

11th March, 1643. I went to see my Lord of Salisbury's Palace at Hatfield, where the most considerable rarity, besides the house (inferior to few then in England for its architecture), were the garden and vineyard, rarely well watered and planted. They also showed us the picture of Secretary Cecil, in Mosaic work, very well done by some Italian hand.

I must not forget what amazed us exceedingly in the night before, namely, a shining cloud in the air, in shape resembling a sword, the point reaching to the north; it was as bright as the moon, the rest of the sky being very serene. It began about eleven at night, and vanished not till above one, being seen by all the south of England. I made many journeys to and from London.

15th April, 1643. To Hatfield, and near the town of Hertford I went to see Sir J. Harrison's house new built. Returning to London, I called to see his Majesty's house and gardens at Theobald's, since demolished by the rebels.

2d May, 1643. I went from Wotton to London, where I saw the furious and zealous people demolish that stately Cross in Cheapside.

On the 4th I returned, with no little regret, for the confusion that threatened us. Resolving to possess myself in some quiet, if it might be, in a time of so great jealousy, I built by my brother's permission, a study, made a fish-pond, an island, and some other solitudes and retirements at Wotton; which gave the first occasion of improving them to those waterworks and gardens which afterward succeeded them, and became at that time the most famous of England.

12th July, 1643. I sent my black menage horse and furniture with a friend to his Majesty, then at Oxford.

23d July, 1643. The Covenant being pressed, I absented myself; but, finding it impossible to evade the doing very unhandsome things, and which had been a great cause of my perpetual motions hitherto between Wotton and London, October the 2d, I obtained a

license of his Majesty, dated at Oxford and signed by the King, to travel again.

6th November, 1643. Lying by the way from Wotton at Sir Ralph Whitfield's, at Blechingley (whither both my brothers had conducted me), I arrived at London on the 7th, and two days after took boat at the Tower-wharf, which carried me as far as Sittingbourne, though not without danger, I being only in a pair of oars, exposed to a hideous storm: but it pleased God that we got in before the peril was considerable. From thence, I went by post to Dover, accompanied with one Mr. Thicknesse, a very dear friend of mine.

11th November, 1643. Having a reasonable good passage, though the weather was snowy and untoward enough, we came before Calais, where, as we went on shore, mistaking the tide, our shallop struck on the sands, with no little danger; but at length we got off.

Calais is considered an extraordinary well-fortified place, in the old castle and new citadel regarding the sea. The haven consists of a long bank of sand, lying opposite to it. The market place and the church are remarkable things, besides those relics of our former dominion there. I remember there were engraven in stone, upon the front of an ancient dwelling which was showed us, these words in English—"God save the King," together with the name of the architect and date. The walls of the town are substantial; but the situation toward the land is not pleasant, by reason of the marshes and low grounds about it.

12th November, 1643. After dinner we took horse with the Messagere, hoping to have arrived at Boulogne that night; but there fell so great a snow, accompanied with hail, rain, and sudden darkness, that we had much ado to gain the next village; and in this passage, being to cross a valley by a causeway, and a bridge built over a small river, the rain that had fallen making it an impetuous stream for near a quarter of a mile, my horse slipping had almost been the occasion of my perishing. We none of us went to bed; for the soldiers in those parts leaving little in the villages, we had enough to do to get ourselves dry, by morning, between the fire and the fresh straw. The next day early, we arrived at Boulogne.

This is a double town, one part of it situate on a high rock, or downs; the other, called the lower town, is yet with a great declivity toward the sea; both of them defended by a strong castle, which stands on a notable eminence. Under the town runs the river, which is yet but an inconsiderable brook. Henry VIII., in the siege of this place is said to have used those great leathern guns which I have since beheld in the Tower of London, inscribed, "*Non Marte opus est cui non deficit Mercurius*"; if at least the history be true, which my Lord Herbert doubts.

The next morning, in some danger of parties [Spanish] surprising us, we came to Montreuil, built on the summit of a most conspicuous hill, environed with fair and ample meadows; but all the suburbs had been from time to time ruined, and were now lately burnt by the Spanish inroads. This town is fortified with two very deep dry ditches; the walls about the bastions and citadel are a noble piece of masonry. The church is more glorious without than within; the market place large; but the inhabitants are miserably poor. The next day, we came to Abbeville, having passed all this way in continual expectation of the volunteers, as they call them. This town affords a good aspect toward the hill from whence we descended: nor does it deceive us; for it is handsomely built, and has many pleasant and useful streams passing through it, the main river being the Somme, which discharges itself into the sea at St. Valery, almost in view of the town. The principal church is a very handsome piece of Gothic architecture, and the ports and ramparts sweetly planted for defense and ornament. In the morning, they brought us choice of guns and pistols to sell at reasonable rates, and neatly made, being here a merchandise of great account, the town abounding in gunsmiths.

Hence we advanced to Beauvais, another town of good note, and having the first vineyards we had seen. The next day to Beaumont, and the morrow to Paris, having taken our repast at St. Denis, two leagues from that great city. St. Denis is considerable only for its stately cathedral, and the dormitory of the French kings, there inhumed as ours at Westminster Abbey. The treasury is esteemed one of the richest in Europe. The church was built by

King Dagobert,\* but since much enlarged, being now 390 feet long, 100 in breadth, and 80 in height, without comprehending the cover: it has also a very high shaft of stone, and the gates are of brass. Here, while the monks conducted us, we were showed the ancient and modern sepulchers of their kings, beginning with the founder to Louis his son, with Charles Martel and Pepin, son and father of Charlemagne. These lie in the choir, and without it are many more: among the rest that of Bertrand du Guesclin, Constable of France; in the chapel of Charles V., all his posterity; and near him the magnificent sepulcher of Francis I., with his children, wars, victories, and triumphs engraven in marble. In the nave of the church lies the catafalque, or hearse, of Louis XIII., Henry II., a noble tomb of Francis II., and Charles IX. Above are bodies of several Saints; below, under a state of black velvet, the late Louis XIII., father of this present monarch. Every one of the ten chapels, or oratories, had some Saints in them; among the rest, one of the Holy Innocents. The treasury is kept in the sacristy above, in which are crosses of massy gold and silver, studded with precious stones, one of gold three feet high, set with sapphires, rubies, and great oriental pearls. Another given by Charles the Great, having a noble amethyst in the middle of it, stones and pearls of inestimable value. Among the still more valuable relics are, a nail from our Savior's Cross, in a box of gold full of precious stones; a crucifix of the true wood of the Cross, carved by Pope Clement III., encased in a crystal covered with gold; a box in which is some of the Virgin's hair; some of the linen in which our blessed Savior was wrapped at his nativity; in a huge reliquary, modeled like a church, some of our Savior's blood, hair, clothes, linen with which he wiped the Apostles' feet; with many other equally authentic toys, which the friar who conducted us would have us believe were authentic relics. Among the treasures is the crown of Charlemagne, his seven-foot high scepter and hand of justice, the agraffe of his royal mantle, beset with diamonds and rubies, his sword, belt, and spurs of gold; the crown of St. Louis, covered with precious stones, among which is one vast ruby, uncut, of inestimable value, weighing 300 carats (under which is set one of the thorns of our blessed Savior's

\* A. D. 630.

crown), his sword, seal, and hand of justice. The two crowns of Henry IV., his scepter, hand of justice, and spurs. The two crowns of his son Louis. In the cloak-royal of Anne of Bretagne is a very great and rare ruby. Divers books covered with solid plates of gold, and studded with precious stones. Two vases of beryl, two of agate, whereof one is esteemed for its bigness, color, and embossed carving, the best now to be seen: by a special favor I was permitted to take the measure and dimensions of it; the story is a Bacchanalia and sacrifice to Priapus; a very holy thing truly, and fit for a cloister! It is really antique, and the noblest jewel there. There is also a large gondola of chrysolite, a huge urn of porphyry, another of calcedon, a vase of onyx, the largest I had ever seen of that stone; two of crystal; a morsel of one of the waterpots in which our Savior did his first miracle; the effigies of the Queen of Saba, of Julius, Augustus, Mark Antony, Cleopatra, and others, upon sapphires, topazes, agates, and cornelians: that of the queen of Saba\* has a Moorish face; those of Julius and Nero on agates are rarely colored and cut. A cup in which Solomon was used to drink, and an Apollo on a great amethyst. There lay in a window a mirror of a kind of stone said to have belonged to the poet Virgil. Charlemagne's chessmen, full of Arabic characters. In the press next the door, the brass lantern full of crystals, said to have conducted Judas and his company to apprehend our blessed Savior. A fair unicorn's horn, sent by a king of Persia, about seven feet long. In another press (over which stands the picture in oil of their Orleans Amazon with her sword), the effigies of the late French kings in wax, like ours in Westminster, covered with their robes; with a world of other rarities. Having rewarded our courteous friar, we took horse for Paris, where we arrived about five in the afternoon. In the way were fair crosses of stone carved with fleur-de-lis at every furlong's end, where they affirm St. Denis rested and laid down his head after martyrdom, carrying it from the place where this monastery is builded. We lay at Paris at the Ville de Venice; where, after I had something refreshed, I went to visit Sir Richard Browne, his Majesty's Resident with the French king.

\*Or Sheba.

5th December, 1643. The Earl of Norwich came as Ambassador extraordinary: I went to meet him in a coach and six horses, at the palace of Monsieur de Bassompierre, where I saw that gallant person, his gardens, terraces, and rare prospects. My lord was waited on by the master of the ceremonies, and a very great cavalcade of men of quality, to the Palais Cardinal, where on the 23d he had audience of the French king, and the queen Regent his mother, in the golden chamber of presence. From thence, I conducted him to his lodgings in Rue St. Denis, and so took my leave.

24th December, 1643. I went with some company to see some remarkable places without the city: as the Isle, and how it is encompassed by the Rivers Seine and the Ouse. The city is divided into three parts, whereof the town is greatest. The city lies between it and the University in form of an island. Over the Seine is a stately bridge called Pont Neuf, begun by Henry III. in 1578, finished by Henry IV. his successor. It is all of hewn freestone found under the streets, but more plentifully at Montmartre, and consists of twelve arches, in the midst of which ends the point of an island, on which are built handsome artificers' houses. There is one large passage for coaches, and two for foot passengers three or four feet higher, and of convenient breadth for eight or ten to go abreast. On the middle of this stately bridge, on one side, stands the famous statue of Henry the Great on horseback, exceeding the natural proportion by much; and, on the four faces of a stately pedestal (which is composed of various sorts of polished marbles and rich moldings), inscriptions of his victories and most signal actions are engraven in brass. The statue and horse are of copper, the work of the great John di Bologna, and sent from Florence by Ferdinand the First, and Cosmo the Second, uncle and cousin to Mary de Medicis, the wife of King Henry, whose statue it represents. The place where it is erected is inclosed with a strong and beautiful grate of iron, about which there are always mountebanks showing their feats to the idle passengers. From hence is a rare prospect toward the Louvre and suburbs of St. Germain, the Isle du Palais, and Nôtre Dame. At the foot of this bridge is a water-house, on the front whereof, at a great height, is the story of Our Savior and the woman of

Samaria pouring water out of a bucket. Above, is a very rare dial of several motions, with a chime, etc. The water is conveyed by huge wheels, pumps, and other engines, from the river beneath. The confluence of the people and multitude of coaches passing every moment over the bridge, to a new spectator is an agreeable diversion. Other bridges there are, as that of Nôtre Dame and the Pont-au-Change, etc., fairly built, with houses of stone, which are laid over this river; only the Pont St. Anne, landing the suburbs of St. Germain at the Tuileries, is built of wood, having likewise a water house in the midst of it, and a statue of Neptune casting water out of a whale's mouth, of lead, but much inferior to the Samaritan.

The University lies southwest on higher ground, contiguous to, but the lesser part of, Paris. They reckon no less than sixty-five colleges; but they in nothing approach ours at Oxford for state and order. The booksellers dwell within the University. The schools (of which more hereafter) are very regular.

The suburbs are those of St. Denis, Honoré, St. Marcel, St. Jaques, St. Michael, St. Victoire, and St. Germain, which last is the largest, and where the nobility and persons of best quality are seated: and truly Paris, comprehending the suburbs, is, for the material the houses are built with, and many noble and magnificent piles, one of the most gallant cities in the world; large in circuit, of a round form, very populous, but situated in a bottom, environed with gentle declivities, rendering some places very dirty, and making it smell as if sulphur were mingled with the mud; yet it is paved with a kind of freestone, of near a foot square, which renders it more easy to walk on than our pebbles in London.

On Christmas eve, I went to see the Cathedral at Nôtre Dame, erected by Philip Augustus, but begun by King Robert, son of Hugh Capet. It consists of a Gothic fabric, sustained with 120 pillars, which make two aisles in the church round about the choir, without comprehending the chapels, being 174 paces long, 60 wide, and 100 high. The choir is inclosed with stonework graven with the sacred history, and contains forty-five chapels cancelled with iron. At the front of the chief entrance are statues in relievo of the kings, twenty-eight in number, from Childebert to the founder, Philip; and above them

are two high square towers, and another of a smaller size, bearing a spire in the middle, where the body of the church forms a cross. The great tower is ascended by 389 steps, having twelve galleries from one to the other. They greatly reverence the crucifix over the screen of the choir, with an image of the Blessed Virgin. There are some good modern paintings hanging on the pillars. The most conspicuous statute is the huge colossal one of St. Christopher; with divers other figures of men, houses, prospects and rocks, about this gigantic piece; being of one stone, and more remarkable for its bulk than any other perfection. This is the prime church of France for dignity, having archdeacons, vicars, canons, priests, and chaplains in good store, to the number of 127. It is also the palace of the archbishop. The young king was there with a great and martial guard, who entered the nave of the church with drums and fifes, at the ceasing of which I was entertained with the church music; and so I left him.

4th January, 1644. I passed this day with one Mr. J. Wall, an Irish gentleman, who had been a friar in Spain, and afterward a reader in St. Isodore's chair, at Rome; but was, I know not how, getting away, and pretending to be a soldier of fortune, an absolute cavalier, having, as he told us, been a captain of horse in Germany. It is certain he was an excellent disputant, and so strangely given to it that nothing could pass him. He would needs persuade me to go with him this morning to the Jesuits' College, to witness his polemical talent. We found the Fathers in their Church at the Rue St. Antoine, where one of them showed us that noble fabric, which for its cupola, payings, incrustations of marble, the pulpit, altars (especially the high altar), organ, *lavatorium*, etc., but above all, for the richly carved and incomparable front I esteem to be one of the most perfect pieces of architecture in Europe, emulating even some of the greatest now at Rome itself. But this not being what our friar sought, he led us into the adjoining convent, where, having shown us the library, they began a very hot dispute on some points of divinity, which our cavalier contested only to show his pride, and to that indiscreet height, that the Jesuits would hardly bring us to our coach, they being put beside all patience.

The next day, we went into the University, and into the College of Navarre, which is a spacious, well-built quadrangle, having a very noble library.

Thence to the Sorbonne, an ancient fabric built by one Robert de Sorbonne, whose name it retains, but the restoration which the late Cardinal de Richelieu has made to it renders it one of the most excellent modern buildings; the sumptuous church, of admirable architecture, is far superior to the rest. The cupola, portico, and whole design of the church, are very magnificent.

We entered into some of the schools, and in that of divinity we found a grave Doctor in his chair, with a multitude of auditors, who all write as he dictates; and this they call a Course. After we had sat a little, our cavalier started up, and rudely enough began to dispute with the doctor; at which, and especially as he was clad in the Spanish habit, which in Paris is the greatest bugbear imaginable, the scholars and doctor fell into such a fit of laughter, that nobody could be heard speak for a while; but silence being obtained, he began to speak Latin, and made his apology in so good a style, that their derision was turned to admiration; and beginning to argue, he so baffled the Professor, that with universal applause they all rose up, and did him great honors, waiting on us to the very street and our coach, and testifying great satisfaction.

2d February, 1644. I heard the news of my nephew George's birth, which was on January 15th, English style, 1644.

3d February, 1644. I went to the Exchange. The late addition to the buildings is very noble; but the galleries where they sell their petty merchandise nothing so stately as ours at London, no more than the place where they walk below, being only a low vault.

The Palaise, as they call the upper part, was built in the time of Philip the Fair, noble and spacious. The great Hall annexed to it, is arched with stone, having a range of pillars in the middle, round which, and at the sides, are shops of all kinds, especially booksellers'. One side is full of pews for the clerks of the advocates, who swarm here (as ours at Westminster). At one of the ends stands an altar, at which mass is said daily. Within are several chambers, courts, treasuries, etc. Above that is

the most rich and glorious Salle d'Audience, the chamber of St. Louis, and other superior Courts where the Parliament sits, richly gilt on embossed carvings and frets, and exceedingly beautified.

Within the place where they sell their wares, is another narrower gallery, full of shops and toys, etc., which looks down into the prison-yard. Descending by a large pair of stairs, we passed by Sainte Chapelle, which is a church built by St. Louis, 1242, after the Gothic manner: it stands on another church, which is under it, sustained by pillars at the sides, which seem so weak as to appear extraordinary in the artist. This chapel is most famous for its relics, having as they pretend, almost the entire crown of thorns: the agate patine, rarely sculptured, judged one of the largest and best in Europe. There was now a very beautiful spire erecting. The court below is very spacious, capable of holding many coaches, and surrounded with shops, especially engravers', goldsmiths', and watchmakers'. In it are a fair fountain and portico. The Isle du Palais consists of a triangular brick building, whereof one side, looking to the river, is inhabited by goldsmiths. Within the court are private dwellings. The front, looking on the great bridge, is possessed by mountebanks, operators, and puppet-players. On the other part, is the every day's market for all sorts of provisions, especially bread, herbs, flowers, orange trees, choice shrubs. Here is a shop called NOAH'S ARK, where are sold all curiosities, natural or artificial, Indian or European, for luxury or use, as cabinets, shells, ivory, porcelain, dried fishes, insects, birds, pictures, and a thousand exotic extravagances. Passing hence, we viewed the port Dauphine, an arch of excellent workmanship; the street bearing the same name, is ample and straight.

4th February, 1644. I went to see the Marais de Temple, where are a noble church and palace, heretofore dedicated to the Knights Templar, now converted to a piazza, not much unlike ours at Covent Garden; but large and not so pleasant, though built all about with divers considerable palaces.

The Church of St. Geneviève is a place of great devotion, dedicated to another of their Amazons, said to have delivered the city from the English; for which she is esteemed the tutelary saint of Paris. It stands on a

steep eminence, having a very high spire, and is governed by canons regular. At the Palais Royal Henry IV. built a fair quadrangle of stately palaces, arched underneath. In the middle of a spacious area, stands on a noble pedestal a brazen statue of Louis XIII., which, though made in imitation of that in the Roman capitol, is nothing so much esteemed as that on the Pont Neuf.

The hospital of the Quinze-Vingts, in the Rue St. Honoré, is an excellent foundation; but above all is the Hôtel Dieu for men and women, near Nôtre Dame, a princely, pious, and expensive structure. That of the Charité gave me great satisfaction, in seeing how decently and christianly the sick people are attended, even to delicacy. I have seen them served by noble persons, men and women. They have also gardens, walks, and fountains. Divers persons are here cut for the stone, with great success, yearly in May. The two Châtelets (supposed to have been built by Julius Cæsar) are places of judicature in criminal causes; to which is a strong prison. The courts are spacious and magnificent.

8th February, 1644. I took coach and went to see the famous Jardine Royale, which is an inclosure walled in, consisting of all varieties of ground for planting and culture of medical simples. It is well chosen, having in it hills, meadows, wood and upland, natural and artificial, and is richly stored with exotic plants. In the middle of the parterre is a fair fountain. There is a very fine house, chapel, laboratory, orangery, and other accommodations for the President, who is always one of the king's chief physicians.

From hence, we went to the other side of the town, and to some distance from it, to the Bois de Vincennes, going by the Bastille, which is the fortress, tower, and magazine of this great city. It is very spacious within, and there the Grand Master of the artillery has his house, with fair gardens and walks.

The Bois de Vincennes has in it a square and noble castle, with magnificent apartments, fit for a royal court, not forgetting the chapel. It is the chief prison for persons of quality. About it there is a park walled in, full of deer; and in one part there is a grove of goodly pine trees.

The next day, I went to see the Louvre with more attention, its several courts and pavilions. One of

the quadrangles, begun by Henry IV., and finished by his son and grandson, is a superb, but mixed structure. The cornices, moldings, and compartments, with the insertion of several colored marbles, have been of great expense.

We went through the long gallery, paved with white and black marble, richly fretted and painted *à fresco*. The front looking to the river, though of rare work for the carving, yet wants of that magnificence which a plainer and truer design would have contributed to it.

In the Cour aux Tuileries is a princely fabric; the winding geometrical stone stairs, with the cupola, I take to be as bold and noble a piece of architecture as any in Europe of the kind. To this is a *corps de logis*, worthy of so great a prince. Under these buildings, through a garden in which is an ample fountain, was the king's printing house, and that famous letter so much esteemed. Here I bought divers of the classic authors, poets, and others.

We returned through another gallery, larger, but not so long, where hung the pictures of all the kings and queens and prime nobility of France.

Descending hence, we were let into a lower very large room, called the *Salle des Antiques*, which is a vaulted Cimelia, destined for statues only, among which stands that so celebrated Diana of the Ephesians, said to be the same which uttered oracles in that renowned Temple. Besides these colossean figures of marble, I must not forget the huge globe suspended by chains. The pavings, inlayings, and incrustations of this Hall, are very rich.

In another more private garden toward the Queen's apartment is a walk, or cloister, under arches, whose terrace is paved with stones of a great breadth; it looks toward the river, and has a pleasant aviary, fountain, stately cypresses, etc. On the river are seen a prodigious number of barges and boats of great length, full of hay, corn, wood, wine, and other commodities, which this vast city daily consumes. Under the long gallery we have described, dwell goldsmiths, painters, statuaries, and architects, who being the most famous for their art in Christendom have stipends allowed them by the King. Into that of Monsieur Saracin we entered, who was then

molding for an image of a Madonna to be cast in gold of a great size to be sent by the Queen Regent to Loretto, as an offering for the birth of the Dauphin, now the young King.

I finished this day with a walk in the great garden of the Tuileries, rarely contrived for privacy, shade, or company, by groves, plantations of tall trees, especially that in the middle, being of elms, the other of mulberries; and that labyrinth of cypresses; not omitting the noble hedges of pomegranates, fountains, fish-ponds, and an aviary; but, above all, the artificial echo, redoubling the words so distinctly; and, as it is never without some fair nymph singing to its grateful returns; standing at one of the focuses, which is under a tree or little cabinet of hedges, the voice seems to descend from the clouds; at another, as if it was underground. This being at the bottom of the garden, we were let into another, which being kept with all imaginary accurateness as to the orangery, precious shrubs, and rare fruits, seemed a Paradise. From a terrace in this place we saw so many coaches, as one would hardly think could be maintained in the whole city, going, late as it was in the year, toward the course, which is a place adjoining, of near an English mile long, planted with four rows of trees, making a large circle in the middle. This course is walled about, near breast high, with squared freestone, and has a stately arch at the entrance, with sculpture and statues about it, built by Mary di Medicis. Here it is that the gallants and ladies of the Court take the air and divert themselves, as with us in Hyde Park, the circle being capable of containing a hundred coaches to turn commodiously, and the larger of the plantations for five or six coaches abreast.

Returning through the Tuileries, we saw a building in which are kept wild beasts for the King's pleasure, a bear, a wolf, a wild boar, a leopard, etc.

27th February, 1644. Accompanied with some English gentlemen, we took horse to see St. Germain-en-Laye, a stately country house of the King, some five leagues from Paris. By the way, we alighted at St. Cloud, where, on an eminence near the river, the Archbishop of Paris has a garden, for the house is not very considerable, rarely watered and furnished with fountains, statues,

and groves; the walks are very fair; the fountain of Laocoon is in a large square pool, throwing the water near forty feet high, and having about it a multitude of statues and basins, and is a surprising object. But nothing is more esteemed than the cascade falling from the great steps into the lowest and longest walk from the Mount Parnassus, which consists of a grotto, or shell-house, on the summit of the hill, wherein are divers waterworks and contrivances to wet the spectators; this is covered with a fair cupola, the walls painted with the Muses, and statues placed thick about it, whereof some are antique and good. In the upper walks are two perspectives, seeming to enlarge the alleys, and in this garden are many other ingenious contrivances. The palace, as I said, is not extraordinary. The outer walls only painted *à fresco*. In the court is a Volary, and the statues of Charles IX., Henry III., IV., and Louis XIII., on horseback, mezzo-relievo'd in plaster. In the garden is a small chapel; and under shelter is the figure of Cleopatra, taken from the Belvidere original, with others. From the terrace above is a tempest well painted; and thence an excellent prospect toward Paris, the meadows, and river.

At an inn in this village is a host who treats all the great persons in princely lodgings for furniture and plate, but they pay well for it, as I have done. Indeed, the entertainment is very splendid, and not unreasonable, considering the excellent manner of dressing their meat, and of the service. Here are many debauches and excessive revelings, as being out of all noise and observance.

From hence, about a league further, we went to see Cardinal Richelieu's villa, at Ruell. The house is small, but fairly built, in form of a castle, moated round. The offices are toward the road, and over against it are large vineyards, walled in. But, though the house is not of the greatest, the gardens about it are so magnificent, that I doubt whether Italy has any exceeding it for all rarities of pleasure. The garden nearest the pavilion is a parterre, having in the midst divers noble brass statues, perpetually spouting water into an ample basin, with other figures of the same metal; but what is most admirable is the vast inclosure, and variety of ground,

in the large garden, containing vineyards, cornfields, meadows, groves (whereof one is of perennial greens), and walks of vast length, so accurately kept and cultivated, that nothing can be more agreeable. On one of these walks, within a square of tall trees, is a basilisk of copper, which, managed by the fountaineer, casts water near sixty feet high, and will of itself move round so swiftly, that one can hardly escape wetting. This leads to the Citronière, which is a noble conserve of all those rarities; and at the end of it is the Arch of Constantine, painted on a wall in oil, as large as the real one at Rome, so well done, that even a man skilled in painting, may mistake it for stone and sculpture. The sky and hills, which seem to be between the arches, are so natural, that swallows and other birds, thinking to fly through, have dashed themselves against the wall. I was infinitely taken with this agreeable cheat. At the further part of this walk is that plentiful, though artificial cascade, which rolls down a very steep declivity, and over the marble steps and basins, with an astonishing noise and fury; each basin hath a jetto in it, flowing like sheets of transparent glass, especially that which rises over the great shell of lead, from whence it glides silently down a channel through the middle of a spacious gravel walk, terminating in a grotto. Here are also fountains that cast water to a great height, and large ponds, two of which have islands for harbor of fowls, of which there is store. One of these islands has a receptacle for them built of vast pieces of rock, near fifty feet high, grown over with moss, ivy, etc., shaded at a competent distance with tall trees: in this rupellary nidary do the fowl lay eggs, and breed. We then saw a large and very rare grotto of shell-work, in the shape of Satyrs, and other wild fancies: in the middle stands a marble table, on which a fountain plays in divers forms of glasses, cups, crosses, fans, crowns, etc. Then the fountaineer represented a shower of rain from the top, met by small jets from below. At going out, two extravagant musketeers shot us with a stream of water from their musket barrels. Before this grotto is a long pool into which ran divers spouts of water from leaden escalop basins. The viewing this paradise made us late at St. Germain.

The first building of this palace is of Charles V., called the Sage; but Francis I. (that true virtuoso) made it complete; speaking as to the style of magnificence then in fashion, which was with too great a mixture of the Gothic, as may be seen in what there is remaining of his in the old Castle, an irregular piece as built on the old foundation, and having a moat about it. It has yet some spacious and handsome rooms of state, and a chapel neatly painted. The new Castle is at some distance, divided from this by a court, of a lower, but more modern design, built by Henry IV. To this belong six terraces, built of brick and stone, descending in cascades toward the river, cut out of the natural hill, having under them goodly vaulted galleries; of these, four have subterranean grotts and rocks, where are represented several objects in the manner of scenes and other motions, by force of water, shown by the light of torches only; among these, is Orpheus with his music; and the animals, which dance after his harp; in the second, is the King and Dolphin;\* in the third, is Neptune sounding his trumpet, his chariot drawn by sea horses; in the fourth, the story of Perseus and Andromeda; mills; hermitages; men fishing; birds chirping; and many other devices. There is also a dry grot to refresh in; all having a fine prospect toward the river, and the goodly country about it, especially the forest. At the bottom, is a parterre; the upper terrace nearly half a mile in length, with double declivities, arched and balustered with stone, of vast and royal cost.

In the pavilion of the new Castle are many fair rooms, well painted, and leading into a very noble garden and park, where is a pall-mall, in the midst of which, on one of the sides, is a chapel, with stone cupola, though small, yet of a handsome order of architecture. Out of the park you go into the forest, which being very large, is stored with deer, wild boars, wolves, and other wild game. The Tennis Court, and Cavallerizzo, for the menaged horses, are also observable.

We returned to Paris by Madrid, another villa of the King's, built by Francis I., and called by that name to absolve him of his oath that he would not go from Madrid (in which he was prisoner), in Spain, but from whence he made his escape. This house is also built in a park,

\*Dauphin.

and walled in. We next called in at the Bonnes-hommes, well situated, with a fair chapel and library.

1st March, 1644. I went to see the Count de Liancourt's Palace in the Rue de Seine, which is well built. Toward his study and bedchamber joins a little garden, which, though very narrow, by the addition of a well-painted perspective, is to appearance greatly enlarged; to this there is another part, supported by arches in which runs a stream of water, rising in the aviary, out of a statue, and seeming to flow for some miles, by being artificially continued in the painting, when it sinks down at the wall. It is a very agreeable deceit. At the end of this garden is a little theater, made to change with divers pretty scenes, and the stage so ordered, with figures of men and women painted on light boards, and cut out, and, by a person who stands underneath, made to act as if they were speaking, by guiding them, and reciting words in different tones, as the parts require. We were led into a round cabinet, where was a neat invention for reflecting lights, by lining divers sconces with thin shining plates of gilded copper.

In one of the rooms of state was an excellent painting of Poussin, being a Satyr kneeling; over the chimney, the Coronation of the Virgin, by Paulo Veronese; another Madonna over the door, and that of Joseph, by Cigali; in the Hall, a Cavaliero di Malta, attended by his page, said to be of Michael Angelo; the Rape of Proserpine, with a very large landscape of Correggio. In the next room are some paintings of Primaticcio, especially the Helena, the naked Lady brought before Alexander, well painted, and a Ceres. In the bedchamber a picture of the Cardinal de Liancourt, of Raphael, rarely colored. In the cabinet are divers pieces of Bassano, two of Polemburg, four of Paulo Brill, the skies a little too blue. A Madonna of Nicholao, excellently painted on a stone; a Judith of Mantegna; three women of Jeronimo; one of Stenwick; a Madonna after Titian, and a Magdalen of the same hand, as the Count esteems it: two small pieces of Paulo Veronese, being the Martyrdoms of St. Justina and St. Catherine; a Madonna of Lucas Van Leyden, sent him from our King; six more of old Bassano; two excellent drawings of Albert; a Magdalen of Leonardo da Vinci; four of Paulo; a very rare Madonna of Titian, given

him also by our King; the *Ecce Homo*, shut up in a frame of velvet, for the life and accurate finishing exceeding all description. Some curious agates, and a chaplet of admirable invention, the intaglios being all on fruit stones. The Count was so exceeding civil, that he would needs make his lady go out of her dressing room, that he might show us the curiosities and pictures in it.

We went thence to visit one Monsieur Perishot, one of the greatest virtuosos in France, for his collection of pictures, agates, medals, and flowers, especially tulips and anemonies. The chiefest of his paintings was a Sebastian, of Titian.

From him we went to Monsieur Frene's, who showed us many rare drawings, a Rape of Helen in black chalk; many excellent things of Sneyders, all naked; some of Julio and Michael Angelo; a Madonna of Passignano; some things of Parmensis, and other masters.

The next morning, being recommended to one Monsieur de Hausse, President of the Parliament, and once Ambassador at Venice for the French King, we were very civilly received, and showed his library. Among his paintings were a rare Venus and Adonis of Veronese, a St. Anthony, after the first manner of Correggio, and a rare Madonna of Palma.

Sunday, the 6th of March, I went to Charenton, two leagues from Paris, to hear and see the manner of the French Protestant Church service. The place of meeting they call the Temple, a very fair and spacious room, built of freestone, very decently adorned with paintings of the Tables of the Law, the Lord's Prayer, and Creed. The pulpit stands at the upper end in the middle, having an inclosure of seats about it, where the Elders and persons of greatest quality and strangers, sit; the rest of the congregation on forms and low stools, but none in pews, as in our churches, to their great disgrace, as nothing so orderly, as here the stools and other cumber are removed when the assembly rises. I was greatly pleased with their harmonious singing the Psalms, which they all learn perfectly well, their children being as duly taught these, as their catechism.

In our passage, we went by that famous bridge over the Marne, where that renowned echo returns the voice of a good singer nine or ten times.

7th March, 1644. I set forward with some company toward Fontainebleau, a sumptuous Palace of the King's, like ours at Hampton Court, about fourteen leagues from the city. By the way, we pass through a forest so prodigiously encompassed with hideous rocks of whitish hard stone, heaped one on another in mountainous heights, that I think the like is nowhere to be found more horrid and solitary. It abounds with stags, wolves, boars, and not long after a lynx, or ounce, was killed among them, which had devoured some passengers. On the summit of one of these gloomy precipices, intermingled with trees and shrubs, the stones hanging over, and menacing ruin, is built an hermitage. In these solitudes, rogues frequently lurk and do mischief (and for whom we were all well appointed with our carabines); but we arrived safe in the evening at the village, where we lay at the Horne, going early next morning to the Palace.

This House is nothing so stately and uniform as Hampton Court, but Francis I. began much to beautify it; most of all Henry IV. (and not a little) the late King. It abounds with fair halls, chambers, and galleries; in the longest, which is 360 feet long, and 18 broad, are painted the Victories of that great Prince, Henry IV. That of Francis I., called the grand Gallery, has all the King's palaces painted in it; above these, in sixty pieces of excellent work in fresco, is the History of Ulysses, from Homer, by Primaticcio, in the time of Henry III., esteemed the most renowned in Europe for the design. The Cabinet is full of excellent pictures, especially a Woman, of Raphael. In the Hall of the Guards is a piece of tapestry painted on the wall, very naturally, representing the victories of Charles VII. over our countrymen. In the Salle des Festins is a rare Chimney-piece, and Henry IV. on horseback, of white marble, esteemed worth 18,000 crowns; Clementia and Pax, nobly done. On columns of jasper, two lions of brass. The new stairs, and a half circular court, are of modern and good architecture, as is a chapel built by Louis XIII., all of jasper, with several incrustations of marble through the inside.

Having seen the rooms, we went to the volary, which has a cupola in the middle of it, great trees and bushes, it being full of birds who drank at two fountains. There is also a fair tennis court, and noble stables; but the

beauty of all are the gardens. In the Court of the Fountains stand divers antiquities and statues, especially a Mercury. In the Queen's Garden is a Diana ejecting a fountain, with numerous other brass statues.

The great Garden, 180 toises long and 154 wide, has in the center a fountain of Tyber of a Coloscean figure of brass, with the Wolf over Romulus and Remus. At each corner of the garden rises a fountain. In the garden of the piscina, is a Hercules of white marble; next, is that of the pines, and without that a canal of an English mile in length, at the end of which rise three jettos in the form of a fleur-de-lis, of a great height; on the margin are excellent walks planted with trees. The carps come familiarly to hand (to be fed). Hence they brought us to a spring, which they say being first discovered by a dog, gave occasion of beautifying this place, both with the palace and gardens. The white and terrific rocks at some distance in the forest, yield one of the most august and stupendous prospects imaginable. The park about this place is very large, and the town full of noblemen's houses.

Next morning, we were invited by a painter, who was keeper of the pictures and rarities, to see his own collection. We were led through a gallery of old Rosso's work, at the end of which, in another cabinet, were three Madonnas of Raphael, and two of Andrea del Sarto. In the Academy where the painter himself wrought, was a St. Michael of Raphael, very rare; St. John Baptist of Leonardo, and a Woman's head; a Queen of Sicily, and St. Margaret of Raphael; two more Madonnas, whereof one very large, by the same hand; some more of del Sarto; a St. Jerome, of Perino del Vaga; the Rape of Proserpine, very good; and a great number of drawings.

Returning part of our way to Paris, that day, we visited a house called *Maison Rouge*, having an excellent prospect, grot, and fountains, one whereof rises fifty feet, and resembles the noise of a tempest, battle of guns, etc., at its issue.

Thence to Essone, a house of Monsieur Essling, who is a great virtuoso; there are many good paintings in it; but nothing so observable as his gardens, fountains, fish-pools, especially that in a triangular form, the water cast out by a multitude of heads about it; there is a noble

cascade and pretty baths, with all accommodations. Under a marble table is a fountain of serpents twisting about a globe.

We alighted next at Corbeil, a town famous for the siege by Henry IV. Here we slept, and returned next morning to Paris.

18th March, 1644. I went with Sir J. Cotton, a Cambridgeshire Knight, a journey into Normandy. The first day, we passed by Gaillon, the Archbishop of Rouen's Palace. The gardens are highly commended, but we did not go in, intending to reach Pontoise by dinner. This town is built in a very gallant place, has a noble bridge over the Oise, and is well refreshed with fountains.

This is the first town in Normandy, and the furthest that the vineyards extend to on this side of the country, which is fuller of plains, wood, and inclosures, with some towns toward the sea, very like England.

We lay this night at a village, called Magny. The next day, descending a very steep hill, we dined at Fleury, after riding five leagues down St. Catherine, to Rouen, which affords a goodly prospect, to the ruins of that chapel and mountain. This country so abounds with wolves that a shepherd whom we met, told us one of his companions was strangled by one of them the day before, and that in the midst of his flock. The fields are mostly planted with pears and apples, and other cider fruits. It is plentifully furnished with quarries of stone and slate, and hath iron in abundance.

I lay at the White Cross, in Rouen, which is a very large city, on the Seine, having two smaller rivers besides, called the Aubette and Robec. There stand yet the ruins of a magnificent bridge of stone, now supplied by one of boats only, to which come up vessels of considerable burden. The other side of the water consists of meadows, and there have the Reformed a church.

The Cathedral Nôtre Dame was built, as they acknowledge, by the English; some English words graven in Gothic characters upon the front seem to confirm it. The towers and whole church are full of carving. It has three steeples, with a pyramid; in one of these, I saw the famous bell so much talked of, thirteen feet in height, thirty-two round, the diameter eleven, weighing 40,000 pounds.

In the Chapel d'Amboise, built by a Cardinal of that name, lies his body, with several fair monuments. The choir has behind it a great dragon painted on the wall, which they say had done much harm to the inhabitants, till vanquished by St. Romain, their Archbishop; for which there is an annual procession. It was now near Easter, and many images were exposed with scenes and stories representing the Passion; made up of little puppets, to which there was great resort and devotion, with offerings. Before the church is a fair palace. St. Ouen is another goodly church and an abbey with fine gardens. Here the King hath lodgings, when he makes his progress through these parts. The structure, where the Court of Parliament is kept, is very magnificent, containing very fair halls and chambers, especially La Chambre Dorée. The town-house is also well built, and so are some gentlemen's houses; but most part of the rest are of timber, like our merchants' in London, in the wooden part of the city.

21st March, 1644. On Easter Monday, we dined at Totes, a solitary inn between Rouen and Dieppe, at which latter place we arrived. This town is situated between two mountains, not unpleasantly, and is washed on the north by our English seas.

The port is commodious; but the entrance difficult. It has one very ample and fair street, in which is a pretty church. The Fort Pollet consists of a strong earth-work, and commands the haven, as on the other side does the castle, which is also well fortified, with the citadel before it; nor is the town itself a little strong. It abounds with workmen, who make and sell curiosities of ivory and tortoise-shells; and indeed whatever the East Indies afford of cabinets, porcelain, natural and exotic rarities, are here to be had, with abundant choice.

23d March, 1644. We passed along the coast by a very rocky and rugged way, which forced us to alight many times before we came to Havre de Grace, where we lay that night.

The next morning, we saw the citadel, strong and regular, well stored with artillery and ammunition of all sorts: the works furnished with fair brass cannon, having a motto, *Ratio ultima Regum*. The allogements of the garrison are uniform; a spacious place for drawing up

the soldiers, a pretty chapel, and a fair house for the Governor. The Duke of Richelieu being now in the fort, we went to salute him; who received us very civilly, and commanded that we should be showed whatever we desired to see. The citadel was built by the late Cardinal de Richelieu, uncle of the present Duke, and may be esteemed one of the strongest in France. The haven is very capacious.

When we had done here, we embarked ourselves and horses to pass to Honfleur, about four or five leagues distant, where the Seine falls into the sea. It is a poor fisher-town, remarkable for nothing so much as the odd, yet useful habits which the good women wear, of bears' and other skins, as of rugs at Dieppe, and all along these maritime coasts.

25th March, 1644. We arrived at Caen, a noble and beautiful town, situate on the river Orne, which passes quite through it, the two sides of the town joined only by a bridge of one entire arch. We lay at the Angel, where we were very well used, the place being abundantly furnished with provisions, at a cheap rate. The most considerable object is the great Abbey and Church, large and rich, built after the Gothic manner, having two spires and middle lantern at the west end, all of stone. The choir round and large, in the center whereof elevated on a square, handsome, but plain sepulcher, is this inscription:

"Hoc sepulchrum invictissimi juxta et clementissimi conquestoris, Gulhelmi, dum viverat Anglorum Regis, Normannorum Cenomanorumque Principis, hujus insignis Abbatiæ piissimi Fundatoris: Cum anno 1562 vesano hæreticorum furore direptum fuisset, pio tandem nobilium ejusdem Abbatiæ religiosorum gratitudinis sensu in tam beneficium largitorem, instauratum fuit, aº D'ni 1642. D'no Johanne de Bailhache Assætoril proto priore. D.D.»

On the other side are these monkish rhymes:

"Qui rexit rigidos Northmannos, atq. Britannos  
Audacter vicit, fortiter obtinuit,  
Et Cenomanensis virtute cecidit ensis,  
Imperique sui Legibus applicuit.  
Rex magnus parvâ jacet hâc Gulhelmus in Urnâ,  
Sufficit et magno parva domus Domino.  
Ter septem gradibus te voverat atq. duobus  
Virginis in gremio Phœbus, et hic obiit.»

We went to the castle, which is strong and fair, and so is the town-house, built on the bridge which unites the two towns. Here are schools and an University for the Jurists.

The whole town is handsomely built of that excellent stone so well known by that name in England. I was led to a pretty garden, planted with hedges of alaternus, having at the entrance a screen at an exceeding height, accurately cut in topiary work, with well understood architecture, consisting of pillars, niches, friezes, and other ornaments, with great curiosity; some of the columns curiously wreathed, others spiral, all according to art.

28th March, 1644. We went toward Paris, lying the first night at Evreux, a Bishop's seat, an ancient town, with a fair cathedral; so the next day we arrived at Paris.

1st April, 1644. I went to see more exactly the rooms of the fine Palace of Luxemburg, in the Fauxbourg St. Germain, built by Mary di Medicis, and I think one of the most noble, entire, and finished piles that is to be seen, taking it with the garden and all its accomplishments. The gallery is of the painting of Rubens, being the history of the Foundress's Life, rarely designed; at the end of it is the Duke of Orleans' library, well furnished with excellent books, all bound in maroquin and gilded, the valance of the shelves being of green velvet, fringed with gold. In the cabinet joining to it are only the smaller volumes, with six cabinets of medals, and an excellent collection of shells and agates, whereof some are prodigiously rich. This Duke being very learned in medals and plants, nothing of that kind escapes him. There are other spacious, noble, and princely furnished rooms, which look toward the gardens, which are nothing inferior to the rest.

The court below is formed into a square by a corridor, having over the chief entrance a stately cupola, covered with stone: the rest is cloistered and arched on pilasters of rustic work. The terrace ascending before the front, paved with white and black marble, is balustered with white marble, exquisitely polished.

Only the hall below is low, and the staircase somewhat of a heavy design, but the facia toward the parterre which is also arched and vaulted with stone, is of admirable beauty and full of sculpture.

The gardens are near an English mile in compass, inclosed with a stately wall, and in a good air. The parterre is indeed of box, but so rarely designed and accurately kept cut, that the embroidery makes a wonderful effect to the lodgings which front it. 'Tis divided into four squares and as many circular knots, having in the center a noble basin of marble near thirty feet in diameter (as I remember), in which a Triton of brass holds a dolphin, that casts a girandola of water near thirty feet high, playing perpetually, the water being conveyed from Arceuil by an aqueduct of stone, built after the old Roman magnificence. About this ample parterre, the spacious walks and all included, runs a border of freestone, adorned with pedestals for pots and statues, and part of it near the steps of the terrace, with a rail and baluster of pure white marble.

The walks are exactly fair, long, and variously descending and so justly planted with limes, elms, and other trees, that nothing can be more delicious, especially that of the hornbeam hedge, which being high and stately, butts full on the fountain.

Toward the further end, is an excavation intended for a vast fish-pool, but never finished, and near it is an inclosure for a garden of simples, well kept; and here the Duke keeps tortoises in great number, who use the pool of water on one side of the garden. Here is also a conservatory for snow. At the upper part, toward the palace, is a grove of tall elms cut into a star, every ray being a walk, whose center is a large fountain.

The rest of the ground is made into several inclosures (all hedge-work or rows of trees) of whole fields, meadows, bocages, some of them containing divers acres.

Next the street side, and more contiguous to the house, are knots in trail, or grass work, where likewise runs a fountain. Toward the grotto and stables, within a wall, is a garden of choice flowers, in which the duke spends many thousand pistoles. In sum, nothing is wanted to render this palace and gardens perfectly beautiful and magnificent; nor is it one of the least diversions to see the number of persons of quality, citizens and strangers, who frequent it, and to whom all access is freely permitted, so that you shall see some walks and retirements full of gallants and ladies; in others melancholy friars; in others,

studious scholars; in others, jolly citizens, some sitting or lying on the grass, others running and jumping; some playing at bowls and ball, others dancing and singing; and all this without the least disturbance, by reason of the largeness of the place.

What is most admirable, you see no gardeners, or men at work, and yet all is kept in such exquisite order, as if they did nothing else but work; it is so early in the morning, that all is dispatched and done without the least confusion.

I have been the larger in the description of this paradise, for the extraordinary delight I have taken in those sweet retirements. The Cabinet and Chapel nearer the garden-front have some choice pictures. All the houses near this are also very noble palaces, especially Petite Luxemburg. The ascent of the street is handsome from its breadth, situation, and buildings.

I went next to view Paris from the top of St. Jacques' steeple, esteemed the highest in the town, from whence I had a full view of the whole city and suburbs, both which, as I judge, are not so large as London: though the dissimilitude of their several forms and situations, this being round, London long,—renders it difficult to determine; but there is no comparison between the buildings, palaces, and materials, this being entirely of stone and more sumptuous, though I esteem our piazzas to exceed theirs.

Hence I took a turn in St. Innocent's churchyard, where the story of the devouring quality of the ground (consuming bodies in twenty-four hours), the vast charnels of bones, tombs, pyramids, and sepulchers, took up much of my time, together with the hieroglyphical characters of Nicholas Flamel's philosophical work, who had founded this church, and divers other charitable establishments, as he testifies in his book.

Here divers clerks get their livelihood by inditing letters for poor maids and other ignorant people who come to them for advice, and to write for them into the country, both to their sweethearts, parents, and friends; every large gravestone serving for a table. Joining to this church is a common fountain, with good relieves upon it.

The next day I was carried to see a French gentle-

man's curious collection, which abounded in fair and rich jewels of all sorts of precious stones, most of them of great sizes and value; agates and onyxes, some of them admirably colored and antique; nor inferior were his landscapes from the best hands, most of which he had caused to be copied in miniature; one of which, rarely painted on stone, was broken by one of our company, by the mischance of setting it up: but such was the temper and civility of the gentleman, that it altered nothing of his free and noble humor.

The next morning, I was had by a friend to the garden of Monsieur Morine, who, from being an ordinary gardener, is become one of the most skillful and curious persons in France for his rare collection of shells, flowers, and insects.

His garden is of an exact oval figure, planted with cypress, cut flat and set as even as a wall: the tulips, anemones, ranunculuses, crocuses, etc., are held to be of the rarest, and draw all the admirers of that kind to his house during the season. He lived in a kind of hermitage at one side of his garden, where his collection of porcelain and coral, whereof one is carved into a large crucifix, is much esteemed. He has also books of prints, by Albert [Durer], Van Leyden, Callot, etc. His collection of all sorts of insects, especially of butterflies, is most curious; these he spreads and so medicates, that no corruption invading them, he keeps them in drawers, so placed as to represent a beautiful piece of tapestry.

He showed me the remarks he had made on their propagation, which he promised to publish. Some of these, as also of his best flowers, he had caused to be painted in miniature by rare hands, and some in oil.

6th April, 1644. I sent my sister my own picture in water colors,\* which she requested of me, and went to see divers of the fairest palaces of the town, as that of Vendôme, very large and stately; Lougueville; Guise; Condé;

\* In the first and second editions of the "Diary" many trifling personal details, such as this mention of the author having sent his own picture in water colors to his sister, were omitted. It is not necessary to point them out in detail. They are always of this personal character; as, among other examples, the mention of the wet weather preventing the diarist from stirring out, and that of his coming weary to his lodgings.

Chevereuse; Nevers, esteemed one of the best in Paris toward the river.

I often went to the Palais Cardinal, bequeathed by Richelieu to the King, on condition that it should be called by his name; at this time, the King resided in it, because of the building of the Louvre. It is a very noble house, though somewhat low; the galleries, paintings of the most illustrious persons of both sexes, the Queen's baths, presence-chamber with its rich carved and gilded roof, theater, and large garden, in which is an ample fountain, grove, and mall, worthy of remark. Here I also frequently went to see them ride and exercise the great horse, especially at the Academy of Monsieur du Plessis, and de Veau, whose schools of that art are frequented by the nobility; and here also young gentlemen are taught to fence, dance, play on music, and something in fortification and the mathematics. The design is admirable, some keeping near a hundred brave horses, all managed to the great saddle.

12th April, 1644. I took coach, to see a general muster of all the *gens d'armes* about the city, in the Bois de Boulogne, before their Majesties and all the Grandees. They were reputed to be near 20,000, besides the spectators, who much exceeded them in number. Here they performed all their motions; and, being drawn up, horse and foot, into several figures, represented a battle.

The summer now drawing near, I determined to spend the rest of it in some more remote town on the river Loire; and, on 19th of April, I took leave of Paris, and, by the way of the messenger, agreed for my passage to Orleans.

The way from Paris to this city, as indeed most of the roads in France, is paved with a small square freestone, so that the country does not much molest the traveler with dirt and ill way, as in England, only 'tis somewhat hard to the poor horses' feet, which causes them to ride more temperately, seldom going out of the trot, or *grand pas*, as they call it. We passed divers walled towns, or villages; among others of note, Chartres and Etampes, where we lay the first night. This has a fair church. The next day, we had an excellent road; but had liked to come short home: for no sooner were we entered two or three leagues into the Forest of Orleans (which extends

itself many miles), but the company behind us were set on by rogues, who, shooting from the hedges and frequent covert, slew four upon the spot. Among the slain was a captain of Swiss, of the regiment of Picardy, a person much lamented. This disaster made such an alarm in Orleans at our arrival, that the Prevôt Marshal, with his assistants, going in pursuit, brought in two whom they had shot, and exposed them in the great market place, to see if any would take cognizance of them. I had great cause to give God thanks for this escape; when coming to Orleans and lying at the White Cross, I found Mr. John Nicholas, eldest son to Mr. Secretary. In the night a cat kitted on my bed, and left on it a young one having six ears, eight legs, two bodies from the middle downward, and two tails. I found it dead, but warm, in the morning when I awaked.

21st April, 1644. I went about to view the city, which is well built of stone, on the side of the Loire. About the middle of the river is an island, full of walks and fair trees, with some houses. This is contiguous to the town by a stately stone bridge, reaching to the opposite suburbs, built likewise on the edge of a hill, from whence is a beautiful prospect. At one of the extremes of the bridge are strong towers, and about the middle, on one side, is the statue of the Virgin Mary, or Pieta, with the dead Christ in her lap, as big as the life. At one side of the cross, kneels Charles VII., armed, and at the other Joan d'Arc, armed also like a cavalier, with boots and spurs, her hair disheveled, as the deliveress of the town from our countrymen, when they besieged it. The figures are all cast in copper, with a pedestal full of inscriptions, as well as a fair column joining it, which is all adorned with fleurs-de-lis and a crucifix, with two saints proceeding (as it were) from two branches out of its capital. The inscriptions on the cross are in Latin: "*Mors Christi in cruce nos a contagione, labis et æternorum morborum sanavit.*" On the pedestal: "*Rex in hoc signo hostes profligavit, et Johanna Virgo Aureliam obsidio liberavit. Non diu ab impiis diruta, restituta sunt hoc anno D'ni 1578. Jean Buret, m. f.*"—"Octaunouque Galliam servitute Britannicâ liberavit. A Domino factum est illud, et est mirabile in oculis nostris; in quorum memoriâ hæc nostræ fidei Insignia."

To this is made an annual procession on 12th of May, mass being sung before it, attended with great ceremony and concourse of people. The wine of this place is so strong, that the King's cup bearers are, as I was assured, sworn never to give the King any of it; but it is a very noble liquor, and much of it transported into other countries. The town is much frequented by strangers, especially Germans, for the great purity of the language here spoken, as well as for divers other privileges, and the University, which causes the English to make no long sojourn here, except such as can drink and debauch. The city stands in the county of Bealse (Blaisois); was once styled a Kingdom, afterward a Duchy, as at present, belonging to the second son of France. Many Councils have been hold here, and some Kings crowned. The University is very ancient, divided now by the students into that of four nations, French, High Dutch, Normans, and Picardines, who have each their respective protectors, several officers, treasurers, consuls, seals, etc. There are in it two reasonable fair public libraries, whence one may borrow a book to one's chamber, giving but a note under hand, which is an extraordinary custom, and a confidence that has cost many libraries dear. The first church I went to visit was St. Croix; it has been a stately fabric, but now much ruined by the late civil wars. They report the tower of it to have been the highest in France. There is the beginning of a fair reparation. About this cathedral there is a very spacious cemetery. The townhouse is also very nobly built, with a high tower to it. The market place and streets, some whereof are deliciously planted with limes, are ample and straight, so well paved with a kind of pebble, that I have not seen a neater town in France. In fine, this city was by Francis I. esteemed the most agreeable of his vast dominions.

28th April, 1644. Taking boat on the Loire, I went toward Blois, the passage and river being both very pleasant. Passing Mehun, we dined at Baugenci, and slept at a little town called St. Dieu. Quitting our bark, we hired horses to Blois, by the way of Chambord, a famous house of the King's, built by Francis I. in the middle of a solitary park, full of deer, inclosed with a

wall. I was particularly desirous of seeing this palace, from the extravagance of the design, especially the staircase, mentioned by Palladio. It is said that 1800 workmen were constantly employed in this fabric for twelve years: if so, it is wonderful that it was not finished, it being no greater than divers gentlemen's houses in England, both for room and circuit. The carvings are indeed very rich and full. The staircase is devised with four entries, or assents, which cross one another, so that though four persons meet, they never come in sight, but by small loopholes, till they land. It consists of 274 steps (as I remember), and is an extraordinary work, but of far greater expense than use or beauty. The chimneys of the house appear like so many towers. About the whole is a large deep moat. The country about is full of corn, and wine, with many fair noblemen's houses.

We arrived at Blois in the evening. The town is hilly, uneven, and rugged, standing on the side of the Loire, having suburbs joined by a stately stone bridge, on which is a pyramid with an inscription. At the entrance of the castle is a stone statue of Louis XII. on horseback, as large as life, under a Gothic state; and a little below are these words:

*"Hic ubi natus erat dextro Ludovicus Olympo,  
Sumpsit honoratâ regia sceptrâ manu;  
Felix quæ tanti fulsit Lux nuncia Regis!  
Gallica non allo principe digna fuit."*

Under this is a very wide pair of gates, nailed full of wolves and wild-boars' heads. Behind the castle the present Duke Gaston had begun a fair building, through which we walked into a large garden, esteemed for its furniture one of the fairest, especially for simples and exotic plants, in which he takes extraordinary delight. On the right hand is a long gallery full of ancient statues and inscriptions, both of marble and brass; the length, 300 paces, divides the garden into higher and lower ground, having a very noble fountain. There is the portrait of a hart, taken in the forest by Louis XII., which has twenty-four antlers on its head. In the Collegiate Church of St. Savior, we saw many sepulchres of the Earls of Blois.

On Sunday, being May-day, we walked up into Pall Mall, very long, and so noble shaded with tall trees

(being in the midst of a great wood), that unless that of Tours, I had not seen a statelier.

From hence, we proceeded with a friend of mine through the adjoining forest, to see if we could meet any wolves, which are here in such numbers that they often come and take children out of the very streets; yet will not the Duke, who is sovereign here, permit them to be destroyed. We walked five or six miles outright; but met with none; yet a gentleman, who was resting himself under a tree, with his horse grazing by him, told us that half an hour before, two wolves had set upon his horse, and had in probability devoured him, but for a dog which lay by him. At a little village at the end of this wood, we ate excellent cream, and visited a castle builded on a very steep cliff.

Blois is a town where the language is exactly spoken; the inhabitants very courteous; the air so good, that it is the ordinary nursery of the King's children. The people are so ingenious, that, for goldsmith's work and watches, no place in France affords the like. The pastures by the river are very rich and pleasant.

2d May, 1644. We took boat again, passing by Char-mont, a proud castle on the left hand; before it is a sweet island, deliciously shaded with tall trees. A little distance from hence, we went on shore at Amboise, a very agreeable village, built of stone, and the houses covered with blue slate, as the towns on the Loire generally are; but the castle chiefly invited us, the thickness of whose towers from the river to the top, was admirable. We entered by the drawbridge, which has an invention to let one fall, if not premonished. It is full of halls and spacious chambers, and one staircase is large enough, and sufficiently commodious, to receive a coach, and land it on the very tower, as they told us had been done. There is some artillery in it; but that which is most observable is in the ancient chapel, viz, a stag's head, or branches, hung up by chains, consisting of twenty browantlers, the beam bigger than a man's middle, and of an incredible length. Indeed, it is monstrous, and yet I cannot conceive how it should be artificial they show also the ribs and vertebræ of the same beast; but these might be made of whalebone.

Leaving the castle, we passed Mont Louis, a village

having no houses above ground but such only as are hewn out of the main rocks of excellent freestone. Here and there the funnel of a chimney appears on the surface among the vineyards which are over them, and in this manner they inhabit the caves, as it were sea-cliffs, on one side of the river for many miles.

We now came within sight of Tours, where we were designed for the rest of the time I had resolved to stay in France, the sojournment being so agreeable. Tours is situate on the east side of a hill on the river Loire, having a fair bridge of stone called St. Edme; the streets are very long, straight, spacious, well built, and exceeding clean; the suburbs large and pleasant, joined to the city by another bridge. Both the church and monastery of St. Martin are large, of Gothic building, having four square towers, fair organs, and a stately altar, where they show the bones and ashes of St. Martin, with other relics. The Mall without comparison is the noblest in Europe for length and shade, having seven rows of the tallest and goodliest elms I had ever beheld, the innermost of which do so embrace each other, and at such a height, that nothing can be more solemn and majestical. Here we played a party, or party or two, and then walked about the town walls, built of square stone, filled with earth, and having a moat. No city in France exceeds it in beauty, or delight.

6th May, 1644. We went to St. Gatian, reported to have been built by our countrymen; the dial and clock-work are much esteemed. The church has two handsome towers and spires of stone, and the whole fabric is very noble and venerable. To this joins the palace of the Archbishop, consisting both of old and new building, with many fair rooms, and a fair garden. Here I grew acquainted with one Monsieur Merey, a very good musician. The Archbishop treated me very courteously. We visited divers other churches chapels, and monasteries for the most part neatly built, and full of pretty paintings, especially the Convent of the Capuchins, which has a prospect over the whole city, and many fair walks.

8th May, 1644. I went to see their manufactures in silk (for in this town they drive a very considerable trade with silk-worms), their pressing and watering the gro-

grams and camlets, with weights of an extraordinary poise, put into a rolling engine. Here I took a master of the language, and studied the tongue very diligently, recreating myself sometimes at the Mall, and sometimes about the town. The house opposite my lodging had been formerly a King's palace; the outside was totally covered with fleur-de-lis, embossed out of the stone. Here Mary de Medicis held her Court, when she was compelled to retire from Paris by the persecution of the great Cardinal.

25th May, 1644. Was the Fête Dieu, and a goodly procession of all the religious orders, the whole streets hung with their best tapestries, and their most precious movables exposed; silks, damasks, velvets, plate, and pictures in abundance; the streets strewed with flowers, and full of pageantry, banners, and bravery.

6th June, 1644. I went by water to visit that goodly and venerable Abbey of Marmoutiers, being one of the greatest in the kingdom; to it is a very ample church of stone, with a very high pyramid. Among other relics the Monks showed us is the Holy Ampoule, the same with that which sacres their Kings at Rheims, this being the one that anointed Henry IV. Ascending many steps, we went into the Abbot's Palace, where we were showed a vast tun (as big as that at Heidelberg), which they report St. Martin (as I remember) filled from one cluster of grapes growing there.

7th June, 1644. We walked about two miles from the city to an agreeable solitude, called Du Plessis, a house belonging to the King. It has many pretty gardens, full of nightingales; and, in the chapel, lies buried the famous poet, Ronsard.

Returning, we stepped into a Convent of Franciscans, called St. Cosmo, where the cloister is painted with the miracles of their St. Francis à Paula, whose ashes lie in their chapel, with this inscription: "*Corpus Sancti Fran. à Paula 1507, 13 Aprilis, concrematur verò ab Hæreticis anno 1562, cujus quidem ossa et cineres hic jacent.*" The tomb has four small pyramids of marble at each corner.

9th June, 1644. I was invited to a vineyard, which was so artificially planted and supported with arched poles, that stooping down one might see from end to end, a very great length, under the vines, the bunches hanging down in abundance.

20th June, 1644. We took horse to see certain natural caves, called Gouttière, near Colombière, where there is a spring within the bowels of the earth, very deep and so excessive cold, that the drops meeting with some lapidescent matter, it converts them into a hard stone, which hangs about it like icicles, having many others in the form of comfitures and sugar plums, as we call them.

Near this, we went under the ground almost two furlongs, lighted with candles, to see the source and spring which serves the whole city, by a passage cut through the main rock of freestone.

28th June, 1644. I went to see the palace and gardens of Chevereux, a sweet place.

30th June, 1644. I walked through the vineyards as far as Roche Corbé, to the ruins of an old and very strong castle, said to have been built by the English, of great height, on the precipice of a dreadful cliff, from whence the country and river yield a most incomparable prospect.

27th July, 1644. I heard excellent music at the Jesuits, who have here a school and convent, but a mean chapel. We have now store of those admirable melons, so much celebrated in France for the best in the kingdom.

1st August 1644. My valet, one Garro, a Spaniard, born in Biscay, having misbehaved, I was forced to discharge him; he demanded of me (besides his wages) no less than 100 crowns to carry him to his country; refusing to pay it, as no part of our agreement, he had the impudence to arrest me; the next day I was to appear in Court, where both our avocats pleaded before the Lieutenant Civil; but it was so unreasonable a pretense, that the Judge had not patience to hear it out. The Judge immediately acquitted me, after he had reproached the avocat who took part with my servant, he rose from the Bench, and making a courteous excuse to me, that being a stranger I should be so used, he conducted me through the court to the street-door. This varlet afterward threatened to pistol me. The next day, I waited on the Lieutenant, to thank him for his great civility.

18th August, 1644. The Queen of England came to Tours, having newly arrived in France, and going for Paris. She was very nobly received by the people and

clergy, who went to meet her with the trained bands. After the harangue, the Archbishop entertained her at his Palace, where I paid my duty to her. The 20th she set forward to Paris.

8th September, 1644. Two of my kinsmen came from Paris to this place, where I settled them in their pension and exercises.

14th September, 1644. We took post for Richelieu, passing by l'Isle Bouchard, a village in the way. The next day, we arrived, and went to see the Cardinal's Palace, near it. The town is built in a low, marshy ground, having a narrow river cut by hand, very even and straight, capable of bringing up a small vessel. It consists of only one considerable street, the houses on both sides (as indeed throughout the town) built exactly uniform, after a modern handsome design. It has a large goodly market house and place, opposite to which is the church built of freestone, having two pyramids of stone, which stand hollow from the towers. The church is well built, and of a well-ordered architecture, within handsomely paved and adorned. To this place belongs an Academy, where, besides the exercise of the horse, arms, dancing, etc., all the sciences are taught in the vulgar French by professors stipendiated by the great Cardinal, who by this, the cheap living there, and divers privileges, not only designed the improvement of the vulgar language, but to draw people and strangers to the town; but since the Cardinal's death, it is thinly inhabited; standing so much out of the way, and in a place not well situated for health, or pleasure. He was allured to build by the name of the place, and an old house there belonging to his ancestors. This pretty town is handsomely walled about and moated, with a kind of slight fortification, two fair gates and drawbridges. Before the gate, toward the palace, is a spacious circle, where the fair is annually kept. About a slight-shot from the town is the Cardinal's house, a princely pile, though on an old design, not altogether Gothic, but mixed, and environed by a clear moat. The rooms are stately, most richly furnished with tissue, damask, arras, and velvet, pictures, statues, vases, and all sorts of antiquities, especially the Cæsars, in oriental alabaster. The long gallery is painted with the famous acts of the Founder;

the roof with the life of Julius Cæsar; at the end of it is a cupola, or singing theatre, supported by very stately pillars of black marble. The chapel anciently belonged to the family of the Founder. The court is very ample. The gardens without are very large, and the parterres of excellent embroidery, set with many statues of brass and marble; the groves, meadows, and walks are a real Paradise.

16th September, 1644. We returned to Tours, from whence, after nineteen weeks' sojourn, we traveled toward the more southern part of France, minding now to shape my course so, as I might winter in Italy. With my friend, Mr. Thicknesse, and our guide, we went the first day seven leagues to a castle called Chenonceau, built by Catherine de Medicis, and now belonging to the Duke de Vendôme, standing on a bridge. In the gallery, among divers other excellent statues, is that of Scipio Africanus, of oriental alabaster.

21st September, 1644. We passed by Villefranche, where we dined, and so by Muneton, lying at Viaron-au-mouton, which was twenty leagues. The next day by Murg to Bourges, four leagues, where we spent the day. This is the capital of Berry, an University much frequented by the Dutch, situated on the river Eure. It stands high, is strong, and well placed for defense; is environed with meadows and vines, and the living here is very cheap. In the suburbs of St. Privé, there is a fountain of sharp water which they report wholesome against the stone. They showed us a vast tree which they say stands in the center of France. The French tongue is spoken with great purity in this place. St. Stephen's church is the cathedral, well built *à la Gothique*, full of sepulchres without-side, with the representation of the final Judgment over one of the ports. Here they show the chapel of Claude de la Chastre, a famous soldier who had served six kings of France in their wars. St. Chapelle is built much like that at Paris, full of relics, and containing the bones of one Briat, a giant of fifteen cubits high. It was erected by John, Duke of Berry, and there is showed the coronet of the dukedom. The great tower is a Pharos for defense of the town, very strong, in thickness eighteen feet, fortified with graffs and works; there is a garri-son in it, and a strange engine for throwing great stones,

and the iron cage where Louis, Duke of Orleans, was kept by Charles VIII. Near the Town-house stands the College of Jesuits, where was heretofore an Amphitheater. I was courteously entertained by a Jesuit, who had us into the garden, where we fell into disputation. The house of Jaques Cœur is worth seeing. Bourges is an Archbishopric and Primacy of Aquitaine. I took my leave of Mr. Nicholas, and some other English there; and, on the 23d, proceeded on my journey by Pont du Charge; and lay that evening at Coulaiure, thirteen leagues.

24th September, 1644. By Franchesse, St. Menoux, thence to Moulins, where we dined. This is the chief town of the Bourbonnois, on the river Allier, very navigable. The streets are fair; the castle has a noble prospect, and has been the seat of the Dukes. Here is a pretty park and garden. After dinner, came many who offered knives and scissors to sell; it being a town famous for these trifles. This Duchy of Bourbon is ordinarily assigned for the dowry of the Queens of France.

Hence, we took horse for Varennes, an obscure village, where we lay that night. The next day, we went somewhat out of the way to see the town of Bourbon l'Archambaut, from whose ancient and rugged castle is derived the name of the present Royal Family of France. The castle stands on a flinty rock, overlooking the town. In the midst of the streets are some baths of medicinal waters, some of them excessive hot, but nothing so neatly walled and adorned as ours in Somersetshire; and indeed they are chiefly used to drink of, our Queen being then lodged there for that purpose. After dinner, I went to see the St. Chapelle, a prime place of devotion, where is kept one of the thorns of our Savior's crown, and a piece of the real cross; excellent paintings on glass, and some few statues of stone and wood, which they show for curiosities. Hence, we went forward to La Palise, a village that lodged us that night.

26th September, 1644. We arrived at Roane, where we quitted our guide, and took post for Lyons. Roane seemed to me one of the pleasantest and most agreeable places imaginable, for a retired person: for, besides the situation on the Loire, there are excellent provisions cheap and abundant. It being late when we left this town, we rode no further than Tarare that night (passing

St. Saforin), a little desolate village in a valley near a pleasant stream, encompassed with fresh meadows and vineyards. The hills which we rode over before we descended, and afterward, on the Lyons side of this place, are high and mountainous; fir and pines growing frequently on them. The air methought was much altered as well as the manner of the houses, which are built flatter, more after the eastern manner. Before I went to bed, I took a landscape of this pleasant terrace. There followed a most violent tempest of thunder and lightning.

27th September, 1644. We rode by Pont Charu to Lyons, which being but six leagues we soon accomplished, having made eighty-five leagues from Tours in seven days. Here at the Golden Lion, rue de Flandre, I met divers of my acquaintance, who, coming from Paris, were designed for Italy. We lost no time in seeing the city, because of being ready to accompany these gentlemen in their journey. Lyons is excellently situated on the confluence of the rivers Soane and Rhone, which wash the walls of the city in a very rapid stream; each of these has its bridge; that over the Rhone consists of twenty-eight arches. The two high cliffs, called St. Just and St. Sebastian, are very stately; on one of them stands a strong fort, garrisoned. We visited the cathedral, St. Jean, where was one of the fairest clocks for art and busy invention I had ever seen. The fabric of the church is gothic, as are likewise those of St. Etienne and St. Croix. From the top of one of the towers of St. Jean (for it has four) we beheld the whole city and country, with a prospect reaching to the Alps, many leagues distant. The Archbishop's palace is fairly built. The church of St. Nisier is the greatest; that of the Jacobins is well built. Here are divers other fine churches and very noble buildings we had not time to visit, only that of the Charité, or great hospital for poor, infirm people, entertaining about 1,500 souls, with a school, granary, gardens, and all conveniences, maintained at a wonderful expense, worthy seeing. The place of the *Belle Cour* is very spacious, observable for the view it affords, so various and agreeable, of hills, rocks, vineyards, gardens, precipices, and other extravagant and incomparable advantages presenting themselves together. The Pall Mall is set with fair trees. In fine, this stately, clean,

and noble city, built all of stone, abounds in persons of quality and rich merchants: those of Florence obtaining great privileges above the rest. In the Town-house, they show two tables of brass, on which is engraven Claudius's speech, pronounced to the Senate, concerning the franchising of the town, with the Roman privileges. There are also other antiquities.

30th September, 1644. We bargained with a waterman to carry us to Avignon on the river, and got the first night to Vienne, in Dauphiné. This is an Archbishopric, and the province gives title to the heir-apparent of France. Here we supped and lay, having among other dainties, a dish of truffles, which is a certain earth-nut, found out by a hog trained to it, and for which those animals are sold at a great price. It is in truth an incomparable meat. We were shown the ruins of an amphitheatre, pretty entire; and many handsome palaces, especially that of Pontius Pilate, not far from the town, at the foot of a solitary mountain, near the river, having four pinnacles. Here it is reported he passed his exile, and precipitated himself into the lake not far from it. The house is modern, and seems to be the seat of some gentleman; being in a very pleasant, though melancholy place. The cathedral of Vienne is St. Maurice; and there are many other pretty buildings, but nothing more so, than the mills where they hammer and polish the sword blades.

Hence, the next morning we swam (for the river here is so rapid that the boat was only steered) to a small village called Thein, where we dined. Over against this is another town, named Tournon, where is a very strong castle under a high precipice. To the castle joins the Jesuits' College, who have a fair library. The prospect was so tempting, that I could not forbear designing it with my crayon.

We then came to Valence, a capital city carrying the title of a Duchy; but the Bishop is now sole Lord temporal of it, and the country about it. The town having a University famous for the study of the civil law, is much frequented; but the churches are none of the fairest, having been greatly defaced in the time of the wars. The streets are full of pretty fountains. The citadel is strong and garrisoned. Here we passed the night, and

the next morning by Pont St. Esprit, which consists of twenty-two arches; in the piers of the arches are windows, as it were, to receive the water when it is high and full. Here we went on shore, it being very dangerous to pass the bridge in a boat.

Hence, leaving our barge, we took horse, seeing at a distance the town and principality of Orange; and, lodging one night on the way, we arrived at noon at Avignon. This town has belonged to the Popes ever since the time of Clement V.; being, in 1352, alienated by Jane, Queen of Naples and Sicily. Entering the gates, the soldiers at the guard took our pistols and carbines, and examined us very strictly; after that, having obtained the Governor's and the Vice-Legate's leave to tarry three days, we were civilly conducted to our lodging. The city is on the Rhone, and divided from the newer part, or town, which is on the other side of the river, by a very fair stone bridge (which has been broken); at one end is a very high rock, on which is a strong castle well furnished with artillery. The walls of the city are of large, square freestone, the most neat and best in repair I ever saw. It is full of well-built palaces; those of the Vice-Legate and Archbishop being the most magnificent. There are many sumptuous churches, especially that of St. Magdalene and St. Martial, wherein the tomb of the Cardinal d'Amboise is the most observable. Clement VI. lies buried in that of the Celestines, the altar whereof is exceedingly rich: but for nothing I more admired it than the tomb of Madonna Laura, the celebrated mistress of Petrarch. We saw the Arsenal, the Pope's palace, and the Synagogue of the Jews, who here are distinguished by their red hats. Vaucluse, so much renowned for the solitude of Petrarch, we beheld from the castle; but could not go to visit it for want of time, being now taking mules and a guide for Marseilles.

We lay at Loumas; the next morning, came to Aix, having passed that extremely rapid and dangerous river of Durance. In this tract, all the heaths, or commons, are covered with rosemary, lavender, lentiscus, and the like sweet shrubs, for many miles together; which to me was very pleasant. Aix is the chief city of Provence, being a Parliament and Presidential town, with other royal Courts and Metropolitan jurisdiction. It is well

built, the houses very high, and the streets ample. The Cathedral, St. Savior's, is a noble pile adorned with innumerable figures; especially that of St. Michael; the Baptisterie, the Palace, the Court, built in a most spacious piazza, are very fair. The Duke of Guise's house is worth seeing, being furnished with many antiquities in and about it. The Jesuits have here a royal College, and the City is a University.

7th October, 1644. We had a most delicious journey to Marseilles, through a country sweetly declining to the south and Mediterranean coasts, full of vineyards and olive-yards, orange trees, myrtles, pomegranates, and the like sweet plantations, to which belong pleasantly-situated villas to the number of above 1,500, built all of freestone, and in prospect showing as if they were so many heaps of snow dropped out of the clouds among those perennial greens. It was almost at the shutting of the gates that we arrived. Marseilles is on the sea-coast, on a pleasant rising ground, well walled, with an excellent port for ships and galleys, secured by a huge chain of iron drawn across the harbor at pleasure; and there is a well-fortified tower with three other forts, especially that built on a rock; but the castle commanding the city is that of Notre Dame de la Garde. In the chapel hung up are divers crocodiles' skins.

We went then to visit the galleys, being about twenty-five in number; the Capitaine of the Galley Royal gave us most courteous entertainment in his cabin, the slaves in the interim playing both loud and soft music very rarely. Then he showed us how he commanded their motions with a nod, and his whistle making them row out. The spectacle was to me new and strange, to see so many hundreds of miserably naked persons, their heads being shaven close, and having only high red bonnets, a pair of coarse canvas drawers, their whole backs and legs naked, doubly chained about their middle and legs, in couples, and made fast to their seats, and all commanded in a trice by an imperious and cruel seaman. One Turk among the rest he much favored, who waited on him in his cabin, but with no other dress than the rest, and a chain locked about his leg, but not coupled. This galley was richly carved and gilded, and most of the rest were very beautiful. After bestowing

something on the slaves, the capitaine sent a band of them to give us music at dinner where we lodged. I was amazed to contemplate how these miserable caitiffs lie in their galley crowded together; yet there was hardly one but had some occupation, by which, as leisure and calms permitted, they got some little money, insomuch as some of them have, after many years of cruel servitude, been able to purchase their liberty. The rising-forward and falling-back at their oar, is a miserable spectacle, and the noise of their chains, with the roaring of the beaten waters, has something of strange and fearful in it to one unaccustomed to it. They are ruled and chastised by strokes on their backs and soles of their feet, on the least disorder, and without the least humanity, yet are they cheerful and full of knavery.

After dinner, we saw the church of St. Victoire, where is that saint's head in a shrine of silver, which weighs 600 pounds. Thence to Notre Dame, exceedingly well built, which is the cathedral. Thence to the Duke of Guise's Palace, the Palace of Justice, and the Maison du Roi; but nothing is more strange than the great number of slaves working in the streets, and carrying burdens, with their confused noises, and jingling of their huge chains. The chief trade of the town is in silks and drugs out of Africa, Syria, and Egypt, and Barbary horses, which are brought hither in great numbers. The town is governed by four captains, has three consuls, and one assessor, three judges royal; the merchants have a judge for ordinary causes. Here we bought umbrellas against the heats, and consulted of our journey to Cannes by land, for fear of the Picaroon Turks, who make prize of any small vessels about these parts; we not finding a galley bound for Genoa, whither we were designed.

9th October, 1644. We took mules, passing the first night very late in sight of St. Baume, and the solitary grot where they affirmed Mary Magdalen did her penance. The next day, we lay at Perigueux, a city built on an old foundation; witness the ruins of a most stately amphitheatre, which I went out to design, being about a flight-shot from the town; they call it now the Rolsics. There is also a strong tower near the town, called the Visone, but the town and city are at some distance

from each other. It is a bishopric; has a cathedral with divers noblemen's houses in sight of the sea. The place was formerly called Forum Julij, well known by antiquaries.

10th October, 1644. We proceeded by the ruins of a stately aqueduct. The soil about the country is rocky, full of pines and rare simples.

11th October, 1644. We lay at Cannes, which is a small port on the Mediterranean; here we agreed with a seaman to carry us to Genoa, and, having procured a bill of health (without which there is no admission at any town in Italy), we embarked on the 12th. We touched at the islands of St. Margaret and St. Honore, lately retaken from the Spaniards with great bravery by Prince Harcourt. Here, having paid some small duty, we bought some trifles offered us by the soldiers, but without going on shore. Hence, we coasted within two leagues of Antibes, which is the utmost town in France. Thence by Nice, a city in Savoy, built all of brick, which gives it a very pleasant appearance toward the sea, having a very high castle which commands it. We sailed by Morgus, now called Monaco, having passed Villa Franca, heretofore Portus Herculis, when, arriving after the gates were shut, we were forced to abide all night in the barge, which was put into the haven, the wind coming contrary. In the morning, we were hastened away, having no time permitted us by our avaricious master to go up and see this strong and considerable place, which now belongs to a prince of the family of Grimaldi, of Genoa, who has put both it and himself under the protection of the French. The situation is on a promontory of solid stone and rock. The town walls very fair. We were told that within it was an ample court, and a palace, furnished with the most rich and princely movables, and a collection of statues, pictures, and massy plate to an immense amount.

We sailed by Menton and Ventimiglia, being the first city of the republic of Genoa; supped at Oneglia, where we anchored and lay on shore. The next morning, we coasted in view of the Isle of Corsica, and St. Remo, where the shore is furnished with evergreens, oranges, citrons, and date trees; we lay at Port Mauritio. The next morning by Diano, Araisso, famous for the best

coral fishing, growing in abundance on the rocks, and continually covered by the sea. By Albenga Finale, a very fair and strong town belonging to King of Spain, for which reason a monsieur in our vessel was extremely afraid, as was the patron of our boat for they frequently catch French prizes as they creep these shores to go into Italy; he therefore plied both sails and oars, to get under the protection of a Genoese galley that passed not far before us, and in whose company we sailed as far as the Cape of Savona, a town built at the base of the Apennines: for all this coast (except a little of St. Remo) is a high and steep mountainous ground consisting all of rock-marble, without any grass, trees or rivage, formidable to look on. A strange object it is to consider how some poor cottages stand fast on the precipices of these precipices, and by what steps the inhabitants ascend to them. The rock consists of all sorts of the most precious marbles.

Here, on the 15th, forsaking our galley, we encountered a little foul weather, which made us creep *ter terra*, as they call it, and so a vessel that encountered us advised us to do; but our patron, striving to doubt the point of Savona, making out into the wind put us into great hazard; for blowing very hard from land between those horrid gaps of the mountains, it set so violently, as raised on the sudden so great a sea, that we could not recover the weather-shore for many hours insomuch that, what with the water already entered, and the confusion of fearful passengers (of which one was an Irish bishop, and his brother, a priest, were confounding some as at the article of death), we were almost abandoned to despair, our pilot himself giving up for lost. And now, as we were weary with pumping and laving out the water, almost sinking, it pleased God on the sudden to appease the wind, and with much ado and great peril we recovered the shore, which we now lie in view within half a league in sight of those pleasant villas, and within scent of those fragrant orchards which are on this coast, full of princely retirements for the sumptuousness of their buildings, and nobleness of the plantations, especially those at St. Pietro d'Arena; from whence, the wind blowing as it did, might perfectly smelt the peculiar joys of Italy in the perfumes of orange

citron, and jasmine flowers, for divers leagues seaward.\*

16th October, 1644. We got to anchor under the Pharos, or watch-tower, built on a high rock at the mouth of the Mole of Genoa, the weather being still so foul that for two hours at least we durst not stand into the haven. Toward evening we adventured, and came on shore by the Prattique-house, where, after strict examination by the Syndics, we were had to the Ducal Palace, and there our names being taken, we were conducted to our inn, kept by one Zacharias, an Englishman. I shall never forget a story of our host Zachary, who, on the relation of our peril, told us another of his own, being shipwrecked, as he affirmed solemnly, in the middle of a great sea somewhere in the West Indies, that he swam no less than twenty-two leagues to another island, with a tinder-box wrapped up in his hair, which was not so much as wet all the way; that picking up the carpenter's tools with other provisions in a chest, he and the carpenter, who accompanied him (good swimmers it seems both), floated the chest before them; and, arriving at last in a place full of wood, they built another vessel, and so escaped! After this story, we no more talked of our danger; Zachary put us quite down.

17th October, 1644. Accompanied by a most courteous marchand, called Tomson, we went to view the rarities. The city is built in the hollow or bosom of a mountain, whose ascent is very steep, high, and rocky, so that, from the Lantern and Mole to the hill, it represents the shape of a theater; the streets and buildings so ranged one above another, as our seats are in the playhouses; but, from their materials, beauty, and structure, never was an artificial scene more beautiful to the eye, nor is any place, for the size of it, so full of well-designed and stately palaces, as may be easily concluded by that rare book in a large folio which the great virtuoso and painter, Paul Rubens, has published, though it contains [the description of] only one street and two or three churches.

The first palace we went to visit was that of Hieronymo del Negros, to which we passed by boat across the har-

\* Evelyn seems to have been much enchanted by the fragrancy of the air of this coast, for he has noticed it again in his dedication of the "Fumifugium," to Charles the Second.

bor. Here I could not but observe the sudden and devilish passion of a seaman, who plying us was intercepted by another fellow, that interposed his boat before him and took us in; for the tears gushing out of his eyes, he put his finger in his mouth and almost bit it off by the joint, showing it to his antagonist as an assurance to him of some bloody revenge, if ever he came near that part of the harbor again. Indeed this beautiful city is more stained with such horrid acts of revenge and murders, than any one place in Europe, or haply in the world, where there is a political government, which makes it unsafe to strangers. It is made a galley matter to carry a knife whose point is not broken off.

This palace of Negros is richly furnished with the rarest pictures; on the terrace, or hilly garden, there is a grove of stately trees, among which are sheep, shepherds, and wild beasts, cut very artificially in a gray stone; fountains, rocks, and fish ponds; casting your eyes one way, you would imagine yourself in a wilderness and silent country; sideways, in the heart of a great city; and backward, in the midst of the sea. All this is within one acre of ground. In the house, I noticed those red-plaster floors which are made so hard, and kept so polished, that for some time one would take them for whole pieces of porphyry. I have frequently wondered that we never practiced this [art] in England for cabinets and rooms of state, for it appears to me beyond any invention of that kind; but by their carefully covering them with canvass and fine mattresses, where there is much passage, I suppose they are not lasting there in glory, and haply they are often repaired.

There are numerous other palaces of particular curiosities, for the marchands being very rich, have, like our neighbors, the Hollanders, little or no extent of ground to employ their estates in; as those in pictures and hangings, so these lay it out on marble houses and rich furniture. One of the greatest here for circuit is that of the Prince Doria, which reaches from the sea to the summit of the mountains. The house is most magnificently built without, nor less gloriously furnished within, having whole tables and bedsteads of massy silver, many of them set with agates, onyxes, cornelians, lazulis, pearls, torquoises, and other precious stones. The pictures and statues are

innumerable. To this palace belong three gardens, the first whereof is beautified with a terrace, supported by pillars of marble; there is a fountain of eagles, and one of Neptune, with other sea-gods, all of the purest white marble; they stand in a most ample basin of the same stone. At the side of this garden is such an aviary as Sir Francis Bacon describes in his "*Sermons Fideium*," or "Essays," wherein grow trees of more than two feet diameter, besides cypress, myrtles, lentiscuses, and other rare shrubs, which serve to nestle and perch all sorts of birds, who have air and place enough under their airy canopy, supported with huge iron work, stupendous for its fabric and the charge. The other two gardens are full of orange trees, citrons, and pomegranates, fountains, grotts, and statues. One of the latter is a colossal Jupiter, under which is the sepulchre of a beloved dog, for the care of which one of this family received of the King of Spain 500 crowns a year, during the life of that faithful animal. The reservoir of water here is a most admirable piece of art; and so is the grotto over against it.

We went hence to the Palace of the Dukes, where is also the Court of Justice; thence to the Merchant's Walk, rarely covered. Near the Ducal Palace we saw the public armory, which was almost all new, most neatly kept and ordered, sufficient for 30,000 men. We were showed many rare inventions and engines of war peculiar to that armory, as in the state when guns were first put in use. The garrison of the town chiefly consists of Germans and Corsicans. The famous Strada Nova, built wholly of polished marble, was designed by Rubens, and for stateliness of the buildings, paving, and evenness of the street, is far superior to any in Europe, for the number of houses; that of Don Carlo Doria is a most magnificent structure. In the gardens of the old Marquis Spinola, I saw huge citrons hanging on the trees, applied like our apricots to the walls. The churches are no less splendid than the palaces; that of St. Francis is wholly built of Parian marble; St. Laurence, in the middle of the city, of white and black polished stone, the inside wholly incrustured with marble and other precious materials; on the altar of St. John stand four sumptuous columns of porphyry; and here we were showed an emerald, supposed to be one of the largest in the world. The church of St.

Ambrosio, belonging to the Jesuits, will, when finished, exceed all the rest; and that of the Annunciada, founded at the charges of one family, in the present and future design can never be outdone for cost and art. From the churches we walked to the Mole, a work of solid huge stone, stretching itself near 600 paces into the main sea, and secures the harbor, heretofore of no safety. Of all the wonders of Italy, for the art and nature of the design, nothing parallels this. We passed over to the Pharos, or Lantern, a tower of very great height. Here we took horses, and made the circuit of the city as far as the new walls, built of a prodigious height, and with Herculean industry; witness those vast pieces of whole mountains which they have hewn away, and blown up with gunpowder, to render them steep and inaccessible. They are not much less than twenty English miles in extent, reaching beyond the utmost buildings of the city. From one of these promontories we could easily discern the island of Corsica; and from the same, eastward, we saw a vale having a great torrent running through a most desolate barren country; and then turning our eyes more northward, saw those delicious villas of St. Pietro d'Arena, which present another Genoa to you, the ravishing retirements of the Genoese nobility. Hence, with much pain, we descended toward the Arsenal, where the galleys lie in excellent order.

The inhabitants of the city are much affected to the Spanish mode and stately garb. From the narrowness of the streets, they use sedans and litters, and not coaches.

19th October, 1644. We embarked in a felucca for Livorno, or Leghorn; but the sea running very high, we put in at Porto Venere, which we made with peril, between two narrow horrid rocks, against which the sea dashed with great velocity; but we were soon delivered into as great a calm and a most ample harbor, being in the Golfo di Spetia. From hence, we could see Pliny's Delphini Promontorium, now called Capo fino. Here stood that famous city of Luna, whence the port was named Lunaris, being about two leagues over, more resembling a lake than a haven, but defended by castles and excessive high mountains. We landed at Lerici, where, being Sunday, was a great procession, carrying the Sacrament about the streets in solemn devotion. After dinner we

took post-horses, passing through whole groves of olive trees, the way somewhat rugged and hilly at first, but afterward pleasant. Thus we passed through the towns of Sarzana and Massa, and the vast marble quarries of Carrara, and lodged in an obscure inn, at a place called Viregio. The next morning we arrived at Pisa, where I met my old friend, Mr. Thomas Henshaw, who was then newly come out of Spain, and from whose company I never parted till more than a year after.

The city of Pisa is as much worth seeing as any in Italy; it has contended with Rome, Florence, Sardinia, Sicily, and even Carthage. The palace and church of St. Stefano (where the order of knighthood called by that name was instituted) drew first our curiosity, the outside thereof being altogether of polished marble; within, it is full of tables relating to this Order; over which hang divers banners and pendants, with other trophies taken by them from the Turks, against whom they are particularly obliged to fight; though a religious order, they are permitted to marry. At the front of the palace stands a fountain, and the statue of the great Duke Cosmo. The Campanile, or Settezonio, built by John Venipont, a German, consists of several orders of pillars, thirty in a row, designed to be much higher. It stands alone on the right side of the cathedral, strangely remarkable for this, that the beholder would expect it to fall, being built exceedingly declining, by a rare address of the architect; and how it is supported from falling I think would puzzle a good geometrician. The Duomo, or Cathedral, standing near it, is a superb structure, beautified with six columns of great antiquity; the gates are of brass, of admirable workmanship. The cemetery called Campo Santo is made of divers galley ladings of earth formerly brought from Jerusalem, said to be of such a nature, as to consume dead bodies in forty hours. 'Tis cloistered with marble arches; and here lies buried the learned Philip Decius, who taught in this University. At one side of this church stands an ample and well-wrought marble vessel, which heretofore contained the tribute paid yearly by the city to Cæsar. It is placed, as I remember, on a pillar of opal stone, with divers other antique urns. Near this, and in the same field, is the Baptistery of San Giovanni, built of pure white marble, and covered with so artificial

a cupola, that the voice uttered under it seems to break out of a cloud. The font and pulpit, supported by four lions, is of inestimable value for the preciousness of the materials. The place where these buildings stand they call the AREA. Hence, we went to the College, to which joins a gallery so furnished with natural rarities, stones, minerals, shells, dried animals, skeletons, etc., as is hardly to be seen in Italy. To this the Physic Garden lies, where is a noble palm tree, and very fine waterworks. The river Arno runs through the middle of this stately city, whence the main street is named Lung 'Arno. It is so ample that the Duke's galleys, built in the arsenal here, are easily conveyed to Livorno; over the river is an arch, the like of which, for its flatness, and serving for a bridge, is nowhere in Europe. The Duke has a stately Palace, before which is placed the statue of Ferdinand the Third; over against it is the Exchange, built of marble. Since this city came to be under the Dukes of Tuscany, it has been much depopulated, though there is hardly in Italy any which exceeds it for stately edifices. The situation of it is low and flat; but the inhabitants have spacious gardens, and even fields within the walls.

21st October, 1644. We took coach to Livorno, through the Great Duke's new park full of huge cork trees, the underwood all myrtles, among which were many buffaloes feeding, a kind of wild ox, short nose with horns reversed; those who work with them command them, as our bearwards do the bears, with a ring through the nose, and a cord. Much of this park, as well as a great part of the country about it, is very fenny, and the air very bad.

Leghorn is the prime port belonging to all the Duke's territories; heretofore a very obscure town, but since Duke Ferdinand has strongly fortified it (after the modern way), drained the marshes by cutting a channel thence to Pisa navigable sixteen miles, and has raised a Mole, emulating that at Genoa, to secure the shipping, it is become a place of great receipt; it has also a place for the galleys, where they lie safe. Before the sea is an ample piazza for the market, where are the statues in copper of the four slaves, much exceeding the life for proportion, and, in the judgment of most artists, one of the best pieces of modern work. Here, especially in this

piazza, is such a concourse of slaves, Turks, Moors, and other nations, that the number and confusion is prodigious; some buying, others selling, others drinking, others playing, some working, others sleeping, fighting, singing, weeping, all nearly naked, and miserably chained. Here was a tent, where any idle fellow might stake his liberty against a few crowns, at dice, or other hazard; and, if he lost, he was immediately chained and led away to the galleys, where he was to serve a term of years, but from whence they seldom returned; many sottish persons, in a drunken bravado, would try their fortune in this way.

The houses of this neat town are very uniform, and excellently painted *d fresco* on the outer walls, with representations of many of their victories over the Turks. The houses, though low on account of the earthquakes which frequently happen here, (as did one during my being in Italy), are very well built; the piazza is very fair and commodious, and, with the church, whose four columns at the portico are of black marble polished, gave the first hint to the building both of the church and piazza in Covent Garden with us, though very imperfectly pursued.

22d October, 1644. From Livorno, I took coach to Empoly, where we lay, and the next day arrived at Florence, being recommended to the house of Signor Baritière, in the Piazza del Spirito Santo, where we were exceedingly well treated. Florence is at the foot of the Apennines, the west part full of stately groves and pleasant meadows, beautified with more than a thousand houses and country palaces of note, belonging to gentlemen of the town. The river Arno runs through the city, in a broad, but very shallow channel, dividing it, as it were, in the middle, and over it are four most sumptuous bridges of stone. On that nearest to our quarter are the four Seasons, in white marble; on another are the goldsmiths' shops; at the head of the former stands a column of ophite, upon which a statue of Justice, with her balance and sword, cut out of porphyry, and the more remarkable for being the first which had been carved out of that hard material, and brought to perfection, after the art had been utterly lost; they say this was done by hardening the tools in the juice of certain

herbs. This statue was erected in that corner, because there Cosmo was first saluted with the news of Sienna being taken.

Near this is the famous Palazzo di Strozzi, a princely piece of architecture, in a rustic manner. The Palace of Pitti was built by that family, but of late greatly beautified by Cosmo with huge square stones of the Doric, Ionic, and the Corinthian orders, with a terrace at each side having rustic uncut balustrades, with a fountain that ends in a cascade seen from the great gate, and so forming a vista to the gardens. Nothing is more admirable than the vacant staircase, marbles, statues, urns, pictures, court, grotto, and waterworks. In the quadrangle is a huge jetto of water in a volto of four faces, with noble statues at each square, especially the Diana of porphyry above the grotto. We were here shown a prodigious great loadstone.

The garden has every variety, hills, dales, rocks, groves, aviaries, vivaries, fountains, especially one of five jettos, the middle basin being one of the longest stones I ever saw. Here is everything to make such a Paradise delightful. In the garden I saw a rose grafted on an orange tree. There was much topiary-work, and columns in architecture about the hedges. The Duke has added an ample laboratory, over against which stands a fort on a hill, where they told us his treasure is kept. In this Palace the Duke ordinarily resides, living with his Swiss guards, after the frugal Italian way, and even selling what he can spare of his wines, at the cellar under his very house, wicker bottles dangling over even the chief entrance into the palace, serving for a vintner's bush.

In the Church of Santo Spirito the altar and reliquary are most rich, and full of precious stones; there are four pillars of a kind of serpentine, and some of blue. Hence we went to another Palace of the Duke's, called Palazzo Vecchio, before which is a statue of David, by Michael Angelo, and one of Hercules, killing Cacus, the work of Baccio Bandinelli. The quadrangle about this is of the Corinthian order, and in the hall are many rare marbles, as those of Leo X. and Clement VII., both Popes of the Medicean family; also the acts of Cosmo, in rare painting. In the chapel is kept (as they would make one believe) the original Gospel of St. John, written with his

own hand; and the famous Florentine Pandects, and divers precious stones. Near it is another pendent Tower like that of Pisa, always threatening ruin.

Under the Court of Justice is a stately arcade for men to walk in, and over that, the shops of divers rare artists who continually work for the great Duke. Above this is that renowned Ceimeliarcha, or repository, wherein are hundreds of admirable antiquities, statues of marble and metal, vases of porphyry, etc.; but among the statues none so famous as the Scipio, the Boar, the Idol of Apollo, brought from the Delphic Temple, and two triumphant columns. Over these hang the pictures of the most famous persons and illustrious men in arts or arms, to the number of 300, taken out of the museum of Paulus Jovius. They then led us into a large square room, in the middle of which stood a cabinet of an octangular form, so adorned and furnished with crystals, agates, and sculptures, as exceeds any description. This cabinet is called the *Tribuna* and in it is a pearl as big as an hazelnut. The cabinet is of ebony, lazuli, and jasper; over the door is a round of M. Angelo; on the cabinet, Leo X. with other paintings of Raphael, del Sarto, Perugino, and Correggio, viz, a St. John, a Virgin, a Boy, two Apostles, two heads of Durer, rarely carved. Over this cabinet is a globe of ivory, excellently carved; the Labors of Hercules, in massy silver, and many incomparable pictures in small. There is another, which had about it eight Oriental columns of alabaster, on each whereof was placed a head of a Cæsar, covered with a canopy so richly set with precious stones, that they resembled a firmament of stars. Within it was our Savior's Passion, and the twelve Apostles in amber. This cabinet was valued at two hundred thousand crowns. In another, with calcedon pillars, was a series of golden medals. Here is also another rich ebony cabinet cupolaed with a tortoise shell, and containing a collection of gold medals esteemed worth 50,000 crowns; a wreathed pillar of Oriental alabaster, divers paintings of Da Vinci, Pontorno, del Sarto, an *Ecce Homo* of Titian, a Boy of Bronzini, etc. They showed us a branch of coral fixed on the rock, which they affirm does still grow. In another room, is kept the Tabernacle appointed for the chapel of St. Laurence, about which are placed small statues of Saints, of precious

material; a piece of such art and cost, that having been these forty years in perfecting, it is one of the most curious things in the world. Here were divers tables of Pietra Commesso, which is a marble ground inlaid with several sorts of marbles and stones of various colors representing flowers, trees, beasts, birds, and landscapes. In one is represented the town of Leghorn, by the same hand who inlaid the altar of St. Laurence, Domenico Benotti, of whom I purchased nineteen pieces of the same work for a cabinet. In a press near this they showed an iron nail, one half whereof being converted into gold by one Thurnheuser, a German chemist, is looked on as a great rarity; but it plainly appeared to have been soldered together. There is a curious watch, a monstrous turquoise as big as an egg, on which is carved an emperor's head.

In the armory are kept many antique habits, as those of Chinese kings; the sword of Charlemagne; Hannibal's headpiece; a loadstone of a yard long, which bears up 86 lbs. weight, in a chain of seventeen links, such as the slaves are tied to. In another room are such rare turneries in ivory, as are not to be described for their curiosity. There is a fair pillar of oriental alabaster; twelve vast and complete services of silver plate, and one of gold, all of excellent workmanship; a rich embroidered saddle of pearls sent by the Emperor to this Duke; and here is that embroidered chair set with precious stones in which he sits, when, on St. John's day, he receives the tribute of the cities.

25th October, 1644. We went to the Portico where the famous statue of Judith and Holofernes stands, also the Medusa, all of copper; but what is most admirable is the Rape of a Sabine, with another man under foot, the confusion and turning of whose limbs is most admirable. It is of one entire marble, the work of John di Bologna, and is most stupendous; this stands directly against the great piazza, where, to adorn one fountain, are erected four marble statues and eight of brass, representing Neptune and his family of sea gods, of a Colossean magnitude, with four sea horses, in Parian marble of Lamedrati, in the midst of a very great basin; a work, I think, hardly to be paralleled. Here is also the famous statue of David, by M. Angelo; Hercules and Cacus, by Baccio Bandinelli; the Perseus, in copper, by Bonevento,

and the Judith of Donatelli, which stand publicly before the old Palace with the Centaur of Bologna, huge Colossean figures. Near this stand Cosmo di Medicis on horseback, in brass on a pedestal of marble, and four copper bassorelievos by John di Bologna, with divers inscriptions; the Ferdinand the First, on horseback, is of Pietro Tacca. The brazen boar, which serves for another public fountain, is admirable.

After dinner, we went to the Church of the Annunziata, where the Duke and his Court were at their devotions, being a place of extraordinary repute for sanctity: for here is a shrine that does great miracles, [proved] by innumerable votive tablets, etc., covering almost the walls of the whole church. This is the image of Gabriel, who saluted the Blessed Virgin, and which the artist finished so well, that he was in despair of performing the Virgin's face so well; whereupon it was miraculously done for him while he slept; but others say it was painted by St. Luke himself. Whoever it was, infinite is the devotion of both sexes to it. The altar is set off with four columns of oriental alabaster, and lighted by thirty great silver lamps. There are innumerable other pictures by rare masters. Our Savior's Passion in brass tables inserted in marble, is the work of John di Bologna and Baccio Bandinelli.

To this church joins a convent, whose cloister is painted in *fresco* very rarely. There is also near it an hospital for 1,000 persons, with nurse-children, and several other charitable accommodations.

At the Duke's Cavalerizza, the Prince has a stable of the finest horses of all countries, Arabs, Turks, Barbs, Genets, English, etc., which are continually exercised in the *manège*.

Near this is a place where are kept several wild beasts, as wolves, cats, bears, tigers, and lions. They are loose in a deep walled court, and therefore to be seen with more pleasure than those at the Tower of London, in their grates. One of the lions leaped to a surprising height, to catch a joint of mutton which I caused to be hung down.

\*There are many plain brick towers erected for defense, when this was a free state. The highest is called

\*There seems to be here an omission in the MS. between their leaving Florence and going to Sienna.

the Mangio, standing at the foot of the piazza which we went first to see after our arrival. At the entrance of this tower is a chapel open toward the piazza, of marble well adorned with sculpture.

On the other side is the Signoria, or Court of Justice, well built *a la moderna*, of brick; indeed the bricks of Sienna are so well made, that they look almost as well as porphyry itself, having a kind of natural polish.

In the Senate-house is a very fair Hall where they sometimes entertain the people with public shows and operas, as they call them. Toward the left are the statues of Romulus and Remus with the wolf, all of brass, placed on a column of ophite stone, which they report was brought from the renowned Ephesian Temple. These ensigns being the arms of the town, are set up in divers of the streets and public ways both within and far without the city.

The piazza compasses the *facciata* of the court and chapel, and, being made with descending steps, much resembles the figure of an escalop shell. The white ranges of pavement, intermixed with the excellent bricks above mentioned, with which the town is generally well paved, render it very clean. About this market place (for so it is) are many fair palaces, though not built with excess of elegance. There stands an arch, the work of Baltazar di Sienna, built with wonderful ingenuity, so that it is not easy to conceive how it is supported, yet it has some imperceptible contiguations, which do not betray themselves easily to the eye. On the edge of the piazza is a goodly fountain beautified with statues, the water issuing out of the wolves' mouths, being the work of Jacobo Quercei, a famous artist. There are divers other public fountains in the city, of good design.

After this we walked to the Sapienza, which is the University, or rather College, where the high Germans enjoy many particular privileges when they addict themselves to the civil law: and indeed this place has produced many excellent scholars, besides those three Popes, Alexander, Pius II., and III., of that name, the learned Æneas Sylvius; and both were of the ancient house of the Piccolomini.

The chief street is called Strada Romana, in which Pius II. has built a most stately palace of square stone,

with an incomparable portico joining near to it. The town is commanded by a castle which hath four bastions and a garrison of soldiers. Near it is a list to ride horses in, much frequented by the gallants in summer.

Not far from hence is the Church and Convent of the Dominicans, where in the chapel of St. Catherine of Sienna they show her head, the rest of her body being translated to Rome. The Duomo, or Cathedral, both without and within, is of large square stones of black and white marble polished, of inexpressible beauty, as is the front adorned with sculpture and rare statues. In the middle is a stately cupola and two columns of sundry streaked colored marble. About the body of the church, on a cornice within, are inserted the heads of all the Popes. The pulpit is beautified with marble figures, a piece of exquisite work; but what exceeds all description is the pavement, where (besides the various emblems and other figures in the nave) the choir is wrought with the history of the Bible, so artificially expressed in the natural colors of the marbles, that few pictures exceed it. Here stands a Christo, rarely cut in marble, and on the large high altar is a brazen vessel of admirable invention and art. The organs are exceeding sweet and well tuned. On the left side of the altar is the library, where are painted the acts of Æneas Sylvius, and others by Raphael. They showed us an arm of St. John the Baptist, wherewith, they say, he baptized our Savior in Jordan; it was given by the King of Peloponnesus to one of the Popes, as an inscription testifies. They have also St. Peter's sword, with which he smote off the ear of Malchus.

Just against the cathedral, we went into the Hospital, where they entertain and refresh for three or four days, gratis, such pilgrims as go to Rome. In the chapel belonging to it lies the body of St. Susorius, their founder, as yet uncorrupted, though dead many hundreds of years. They show one of the nails which pierced our Savior, and Saint Chrysostom's "Comment on the Gospel," written by his own hand. Below the hill stands the pool called Fonte Brande, where fish are fed for pleasure more than food.

St. Francis's Church is a large pile, near which, yet a little without the city, grows a tree which they report in their legend grew from the Saint's staff, which, on going

to sleep, he fixed in the ground, and at his waking found it had grown a large tree. They affirm that the wood of it in decoction cures sundry diseases.

2d November, 1644. We went from Sienna, desirous of being present at the cavalcade of the new Pope, Innocent X.,\* who had not yet made the grand procession to St. John di Laterano. We set out by Porto Romano, the country all about the town being rare for hunting and game. Wild boar and venison are frequently sold in the shops in many of the towns about it. We passed near Monte Oliveto, where the monastery of that Order is pleasantly situated, and worth seeing. Passing over a bridge, which, by the inscription, appears to have been built by Prince Matthias, we went through Buon-Convento, famous for the death of the Emperor, Henry VII., who was here poisoned with the Holy Eucharist. Thence, we came to Torrineri, where we dined. This village is in a sweet valley, in view of Montalcino, famous for the rare Muscatello.† After three miles more, we go by St. Quirico, and lay at a private osteria near it, where, after we were provided of lodging, came in Cardinal Donghi, a Genoese by birth, now come from Rome; he was so civil as to entertain us with great respect, hearing we were English, for that, he told us he had been once in our country. Among other discourse, he related how a dove had been seen to sit on the chair in the Conclave at the election of Pope Innocent, which he magnified as a great good omen, with other particulars which we inquired of him, till our suppers parted us. He came in great state with his own bedstead and all the furniture, yet would by no means suffer us to resign the room we had taken up in the lodging before his arrival. Next morning, we rode by Monte Pientio, or, as vulgarly called, Monte Mantumiato, which is of an excessive height, ever and anon peeping above any clouds with its snowy head, till we had climbed to the inn at Radicofani, built by Ferdinand, the great Duke, for the necessary refreshment of travelers in so inhospitable a place. As we ascended, we entered a very thick, solid, and dark body of clouds, looking like rocks at a little distance, which lasted near a mile in going up; they were dry misty vapors, hanging undissolved for

\* John Baptista Pamphili, chosen Pope in October, 1644, died in 1655.

† The wine so called.

a vast thickness, and obscuring both the sun and earth, so that we seemed to be in the sea rather than in the clouds, till, having pierced through it, we came into a most serene heaven, as if we had been above all human conversation, the mountain appearing more like a great island than joined to any other hills; for we could perceive nothing but a sea of thick clouds rolling under our feet like huge waves, every now and then suffering the top of some other mountain to peep through, which we could discover many miles off: and between some breaches of the clouds we could see landscapes and villages of the subjacent country. This was one of the most pleasant, new, and altogether surprising objects that I had ever beheld.

On the summit of this horrid rock (for so it is) is built a very strong fort, garrisoned, and somewhat beneath it is a small town; the provisions are drawn up with ropes and engines, the precipice being otherwise inaccessible. At one end of the town lie heaps of rocks so strangely broken off from the ragged mountain, as would affright one with their horror and menacing postures. Just opposite to the inn gushed out a plentiful and most useful fountain which falls into a great trough of stone, bearing the Duke of Tuscany's arms. Here we dined, and I with my black lead pen took the prospect. It is one of the utmost confines of the Etrurian State toward St. Peter's Patrimony, since the gift of Matilda to Gregory VII., as is pretended.

Here we pass a stone bridge, built by Pope Gregory XIV., and thence immediately to Acquapendente, a town situated on a very ragged rock, down which precipitates an entire river (which gives it the denomination), with a most horrid roaring noise. We lay at the posthouse, on which is this inscription:

*« L'Insegna della Posta, è posta a posta,  
In questa posta, fin che habbia à sua posta  
Ogn' un Cavallo a Vetturi in Posta.»*

Before it was dark, we went to see the Monastery of the Franciscans, famous for six learned Popes, and sundry other great scholars, especially the renowned physician and anatomist, Fabricius de Acquapendente, who was bred and born there.

4th November, 1644. After a little riding, we descended toward the Lake of Bolsena, which being above twenty miles in circuit, yields from hence a most incomparable prospect. Near the middle of it are two small islands, in one of which is a convent of melancholy Capuchins, where those of the Farnesian family are interred. Pliny calls it *Tarquiniensis Lacus*, and talks of divers floating islands about it, but they did not appear to us. The lake is environed with mountains, at one of whose sides we passed toward the town Bolsena, anciently Volsinium, famous in those times, as is testified by divers rare sculptures in the court of St. Christiana's church, the urn, altar, and jasper columns.

After seven miles' riding, passing through a wood heretofore sacred to Juno, we came to Montefiascone, the head of the Falisci, a famous people in old time, and heretofore Falernum, as renowned for its excellent wine, as now for the story of the Dutch Bishop, who lies buried in St. Flavian's church with this epitaph:

*"Propter Est, Est, dominus meus mortuus est."*

Because, having ordered his servant to ride before, and inquire where the best wine was, and there write *Est*, the man found some so good that he wrote *Est, Est*, upon the vessels, and the Bishop drinking too much of it, died.

From Montefiascone, we travel a plain and pleasant champaign to Viterbo, which presents itself with much state afar off, in regard of her many lofty pinnacles and towers; neither does it deceive our expectation; for it is exceedingly beautified with public fountains, especially that at the entrance, which is all of brass and adorned with many rare figures, and salutes the passenger with a most agreeable object and refreshing waters. There are many Popes buried in this city, and in the palace is this odd inscription:

*"Osiridis victoriam in Gigantas litteris historiographicis in hoc antiquissimo marmore inscriptam, ex Herculis olim, nunc Divi Laurentij Templo translata, ad conversanda: vetustiss. patriæ monumenta atq' decora hic locandum statuit S.P.Q. V."*

Under it:

*"Sum Osiris Rex Jupiter universo in terrarum orbe."*

*"Sum Osiris Rex qui ab Itala in Gigantes exercitus veni, vidi, et vici."*

*"Sum Osiris Rex quæ terrarum pacata Italiam decem annos quorum inventor fui."*

Near the town is a sulphurous fountain, which continually boils. After dinner we took horse by the new way of Capranica, and so passing near Mount Ciminus and the Lake, we began to enter the plains of Rome; at which sight my thoughts were strangely elevated, but soon allayed by so violent a shower, which fell just as we were contemplating that proud Mistress of the world, and descending by the Vatican (for at that gate we entered), that before we got into the city I was wet to the skin.

I came to Rome on the 4th of November, 1644, about five at night; and being perplexed for a convenient lodging, wandered up and down on horseback, till at last one conducted us to Monsieur Petit's, a Frenchman, near the Piazza Spagnola. Here I alighted, and, having bargained with my host for twenty crowns a month, I caused a good fire to be made in my chamber and went to bed, being so very wet. The next morning (for I was resolved to spend no time idly here) I got acquainted with several persons who had long lived at Rome. I was especially recommended to Father John, a Benedictine monk and Superior of his Order for the English College of Douay, a person of singular learning, religion, and humanity; also to Mr. Patrick Cary, an Abbot, brother to our learned Lord Falkland, a witty young priest, who afterwards came over to our church; Dr. Bacon and Dr. Gibbs, physicians who had dependence on Cardinal Caponi, the latter being an excellent poet; Father Courtney, the chief of the Jesuits in the English College; my Lord of Somerset, brother to the Marquis of Worcester; and some others, from whom I received instructions how to behave in town, with directions to masters and books to take in search of the antiquities, churches, collections, etc. Accordingly, the next day, November 6th, I began to be very pragmatical.\*

\*The sense in which Evelyn uses this word is that of its old signification, as being very active and full of business, setting to work systematically with what he came upon, namely, to view the antiquities and beauties of Rome.

In the first place, our sights-man (for so they name certain persons here who get their living by leading strangers about to see the city) went to the Palace Farnese, a magnificent square structure, built by Michael Angelo, of the three orders of columns after the ancient manner, and when architecture was but newly recovered from the Gothic barbarity. The court is square and terraced, having two pairs of stairs which lead to the upper rooms, and conducted us to that famous gallery painted by Augustine Caracci, than which nothing is more rare of that art; so deep and well-studied are all the figures, that it would require more judgment than I confess I had, to determine whether they were flat, or embossed. Thence, we passed into another, painted in *chiaroscuro*, representing the fabulous history of Hercules. We went out on a terrace, where was a pretty garden on the leads, for it is built in a place that has no extent of ground backward. The great hall is wrought by Salviati and Zuccharo, furnished with statues, one of which being modern is the figure of a Farnese, in a triumphant posture, of white marble, worthy of admiration. Here we were shown the Museum of Fulvius Ursinos, replete with innumerable collections; but the Major-Domo being absent, we could not at this time see all we wished. Descending into the court, we with astonishment contemplated those two incomparable statues of Hercules and Flora, so much celebrated by Pliny, and indeed by all antiquity, as two of the most rare pieces in the world; there likewise stands a modern statue of Hercules and two Gladiators, not to be despised. In a second court was a temporary shelter of boards over the most stupendous and never-to-be-sufficiently-admired Torso of Amphion and Dirce, represented in five figures, exceeding the life in magnitude, of the purest white marble, the contending work of those famous statuaries, Apollonius and Taurisco, in the time of Augustus, hewed out of one entire stone, and remaining unblemished, to be valued beyond all the marbles of the world for its antiquity and workmanship. There are divers other heads and busts. At the entrance of this stately palace stand two rare and vast fountains of garnito stone, brought into this piazza out of Titus's Baths. Here, in summer, the gentlemen of Rome take the *fresco* in their coaches and on foot. At the sides of this court,

we visited the palace of Signor Pichini, who has a good collection of antiquities, especially the Adonis of Parian marble, which my Lord Arundel would once have purchased, if a great price would have been taken for it.

We went into the CAMPO VACCINO, by the ruins of the Temple of Peace, built by Titus Vespasianus, and thought to be the largest as well as the most richly furnished of all the Roman dedicated places: it is now a heap rather than a temple, yet the roof and *volto* continue firm, showing it to have been formerly of incomparable workmanship. This goodly structure was, none knows how, consumed by fire the very night, by all computation, that our blessed Savior was born.

From hence we passed by the place into which Curtius precipitated himself for the love of his country, now without any sign of a lake, or vorago. Near this stand some columns of white marble, of exquisite work, supposed to be part of the Temple of Jupiter Tonans, built by Augustus; the work of the capitals (being Corinthian) and architrave is excellent, full of sacrificing utensils. There are three other of Jupiter Stator. Opposite to these are the oratories, or churches, of St. Cosmo and Damiano, heretofore the Temples of Romulus; a pretty old fabric, with a tribunal, or tholus within, wrought all of Mosaic. The gates before it are brass, and the whole much obliged to Pope Urban VIII. In this sacred place lie the bodies of those two martyrs; and in a chapel on the right hand is a rare painting of Cavaliere Baglioni.

We next entered St. Lorenzo in Miranda. The portico is supported by a range of most stately columns; the inscription cut in the architrave shows it to have been the Temple of Faustina. It is now made a fair church, and has an hospital which joins it. On the same side is St. Adriano, heretofore dedicated to Saturn. Before this was once placed a military column, supposed to be set in the center of the city, from whence they used to compute the distance of all the cities and places of note under the dominion of those universal monarchs. To this church are likewise brazen gates and a noble front; just opposite we saw the heaps and ruins of Cicero's palace. Hence we went toward Mons Capitolinus, at the foot of which stands the arch of Septimus Severus, full and entire, save where the pedestal and some of the

lower members are choked up with ruins and earth. This arch is exceedingly enriched with sculpture and trophies, with a large inscription. In the terrestrial and naval battles here graven, is seen the Roman Aries (the battering-ram); and this was the first triumphal arch set up in Rome. The Capitol, to which we climbed by very broad steps, is built about a square court, at the right hand of which, going up from Campo Vaccino, gushes a plentiful stream from the statue of Tiber, in porphyry, very antique, and another representing Rome; but, above all, is the admirable figure of Marforius, casting water into a most ample concha. The front of this court is crowned with an excellent fabric containing the Courts of Justice, and where the Criminal Notary sits, and others. In one of the halls they show the statues of Gregory XIII. and Paul III., with several others. To this joins a handsome tower, the whole faciaata adorned with noble statues, both on the outside and on the battlements, ascended by a double pair of stairs, and a stately Posario.

In the center of the court stands that incomparable horse bearing the Emperor Marcus Aurelius, as big as the life, of Corinthian metal, placed on a pedestal of marble, esteemed one of the noblest pieces of work now extant, antique and very rare. There is also a vast head of a colossean magnitude, of white marble, fixed in the wall. At the descending stairs are set two horses of white marble governed by two naked slaves, taken to be Castor and Pollux, brought from Pompey's Theatre. On the balustrade, the trophies of Marius against the Cimbrians, very ancient and instructive. At the foot of the steps toward the left hand is that Colonna Miliaria, with the globe of brass on it, mentioned to have been formerly set in Campo Vaccino. On the same hand, is the palace of the Signiori Conservatori, or three Consuls, now the civil governors of the city, containing the fraternities, or halls and guilds (as we call them), of sundry companies, and other offices of state. Under the portico within, are the statues of Augustus Cæsar, a Bacchus, and the so renowned Colonna Rostrata of Duillius, with the excellent bassi-relievi. In a smaller court, the statue of Constantine, on a fountain, a Minerva's head of brass, and that of Commodus, to which belongs a hand, the thumb whercof

is at least an ell long, and yet proportionable; but the rest of the *colosse* is lost. In the corner of this court stand a horse and lion fighting, as big as life, in white marble, exceedingly valued; likewise the Rape of the Sabines; two cumbent figures of Alexander and Mammea; two monstrous feet of a *colosse* of Apollo; the Sepulchre of Agrippina; and the standard, or antique measure of the Roman foot. Ascending by the steps of the other corner, are inserted four basso-relievos, viz, the triumph and sacrifice of Marcus Aurelius, which last, for the antiquity and rareness of the work, I caused my painter, Carlo Neapolitano, to copy. There are also two statues of the Muses, and one of Adrian, the Emperor; above stands the figure of Marius, and by the wall Marsyas bound to a tree; all of them excellent and antique. Above in the lobby are inserted into the walls those ancient laws, on brass, called the Twelve Tables; a fair Madonna of Pietro Perugino, painted on the wall; near which are the archives, full of ancient records.

In the great hall are divers excellent paintings of Cavaliero Giuseppe d'Arpino, a statue in brass of Sextus V. and of Leo X., of marble. In another hall are many modern statues of their late Consuls and Governors, set about with fine antique heads; others are painted by excellent masters, representing the actions of M. Scævola, Horatius Cocles, etc. The room where the Conservatori now feast upon solemn days, is tapestried with crimson damask, embroidered with gold, having a state or *balduquino* of crimson velvet, very rich; the frieze above rarely painted. Here are in brass, Romulus and Remus sucking the wolf, of brass, with the Shepherd, Faustulus, by them; also the boy plucking the thorn out of his foot, of brass, so much admired by artists. There are also holy statues and heads of Saints. In a gallery near adjoining are the names of the ancient Consuls, Prætors, and Fasti Romani, so celebrated by the learned; also the figure of an old woman; two others representing Poverty; and more in fragments. In another large room, furnished with velvet, are the statue of Adonis, very rare, and divers antique heads. In the next chamber, is an old statue of Cicero, one of another Consul, a Hercules in brass, two women's heads of incomparable work, six other statues; and, over the chimney, a very rare basso-

relievo, and other figures. In a little lobby before the chapel, is the statue of Hannibal, a Bacchus very antique, busts of Pan and Mercury, with other old heads. All these noble statues, etc., belong to the city, and cannot be disposed of to any private person, or removed hence, but are preserved for the honor of the place, though great sums have been offered for them by divers Princes, lovers of art, and antiquity. We now left the Capitol, certainly one of the most renowned places in the world, even as now built by the design of the famous M. Angelo.

Returning home by Ara Coeli, we mounted to it by more than 100 marble steps, not in devotion, as I observed some to do on their bare knees, but to see those two famous statues of Constantine, in white marble, placed there out of his baths. In this church is a Madonna, reported to be painted by St. Luke, and a column, on which we saw the print of a foot, which they affirm to have been that of the Angel, seen on the Castle of St. Angelo. Here the feast of our Blessed Savior's nativity being yearly celebrated with divers pageants, they began to make the preparation. Having viewed the Palace and fountain, at the other side of the stairs, we returned weary to our lodgings.

On the 7th of November, we went again near the Capitol, toward the Tarpeian rock, where it has a goodly prospect of the Tiber. Thence, descending by the Tullianum, where they told us St. Peter was imprisoned, they showed us a chapel (S. Pietro de Vincoli) in which a rocky side of it bears the impression of his face. In the nave of the church gushes a fountain, which they say was caused by the Apostle's prayers, when having converted some of his fellow-captives he wanted water to make them Christians. The painting of the Ascension is by Raphael. We then walked about Mount Palatinus and the Aventine, and thence to the Circus Maximus, capable of holding 40,000 spectators, now a heap of ruins, converted into gardens. Then by the *Forum Boarium*, where they have a tradition that Hercules slew Cacus, some ruins of his temple remaining. The Temple of Janus Quadrifrons, having four arches, importing the four Seasons, and on each side niches for the months, is still a substantial and pretty entire antiquity. Near to this is

the Arcus Argentariorum. Bending now toward the Tiber, we went into the Theater of Marcellus, which would hold 80,000 persons, built by Augustus, and dedicated to his nephew; the architecture, from what remains, appears to be inferior to none. It is now wholly converted into the house of the Savelli, one of the old Roman families. The people were now generally busy in erecting temporary triumphs and arches with statues and flattering inscriptions against his Holiness's grand procession to St. John di Laterani, among which the Jews also began one in testimony of gratitude for their protection under the Papal State. The Palazzo Barberini, designed by the present Pope's architect, Cavaliero Bernini, seems from the size to be as princely an object, as any modern building in Europe. It has a double portico, at the end of which we ascended by two pair of oval stairs, all of stone, and void in the well. One of these led us into a stately hall, the *volto* whereof was newly painted *d fresco*, by the rare hand of Pietro Berretini il Cortone. To this is annexed a gallery completely furnished with whatever art can call rare and singular, and a library full of worthy collections, medals, marbles, and manuscripts; but, above all, an Egyptian Osiris, remarkable for its unknown material and antiquity. In one of the rooms near this hangs the Sposaliccio of St. Sebastian, the original of Annibal Caracci, of which I procured a copy, little inferior to the prototype; a table, in my judgment, superior to anything I had seen in Rome. In the court is a vast broken guglia, or obelisk, having divers hieroglyphics cut on it.

8th November, 1644. We visited the Jesuits' Church, the front whereof is esteemed a noble piece of architecture, the design of Giacomo della Porta and the famous Vignola. In this church lies the body of their renowned Ignatius Loyola, an arm of Xaverius, their other Apostle; and, at the right end of their high altar, their champion, Cardinal Bellarmine. Here Father Kircher (professor of Mathematics and the oriental tongues) showed us many singular courtesies, leading us into their refectory, dispensary, laboratory, gardens, and finally (through a hall hung round with pictures of such of their order as had been executed for their pragmatical and busy adventures) into his own study, where, with Dutch patience,

he showed us his perpetual motions, catoptrics, magnetical experiments, models, and a thousand other crotchets and devices, most of them since published by himself, or his industrious scholar, Schotti.

Returning home, we had time to view the Palazzo de Medicis, which was an house of the Duke of Florence near our lodging, upon the brow of Mons Pincius, having a fine prospect toward the Campo Marzo. It is a magnificent, strong building, with a substruction very remarkable, and a portico supported with columns toward the gardens, with two huge lions, of marble, at the end of the balustrade. The whole outside of the *facciata* is incrusted with antique and rare basso-relievos and statues. Descending into the garden is a noble fountain governed by a Mercury of brass. At a little distance, on the left, is a lodge full of fine statues, among which the Sabines, antique and singularly rare. In the arcade near this stand twenty-four statues of great price, and hard by is a mount planted with cypresses, representing a fortress, with a goodly fountain in the middle. Here is also a row balustred with white marble, covered over with the natural shrubs, ivy, and other perennial greens, divers statues and heads being placed as in niches. At a little distance are those famed statues of Niobe and her family, in all fifteen, as large as the life, of which we have ample mention in Pliny, esteemed among the best pieces of work in the world for the passions they express, and all other perfections of that stupendous art. There is likewise in this garden a fair obelisk, full of hieroglyphics. In going out, the fountain before the front casts water near fifty feet in height, when it is received in a most ample marble basin. Here they usually rode the great horse every morning; which gave me much diversion from the terrace of my own chamber, where I could see all their motions. This evening, I was invited to hear rare music at the Chiesa Nova; the black marble pillars within led us to that most precious oratory of Philippus Neri, their founder; they being of the oratory of secular priests, under no vow. There are in it divers good pictures, as the Assumption of Girolamo Mutiano; the Crucifix; the Visitation of Elizabeth; the Presentation of the Blessed Virgin; Christo Sepolto, of Guido Rheno, Caravaggio, Arpino, and

others. This fair church consists of fourteen altars, and as many chapels. In it is buried (besides their Saint) Cæsar Baronius, the great annalist. Through this, we went into the *sacristia*, where, the tapers being lighted, one of the Order preached; after him stepped up a child of eight or nine years old, who pronounced an oration with so much grace, that I never was better pleased than to hear Italian so well and so intelligently spoken. This course it seems they frequently use, to bring their scholars to a habit of speaking distinctly, and forming their action and assurance, which none so much want as ours in England. This being finished, began their *motet-tos*, which in a lofty cupola richly painted, were sung by eunuchs, and other rare voices, accompanied by theorboes, harpsichords, and viols, so that we were even ravished with the entertainment of the evening. This room is painted by Cortona, and has in it two figures in the niches, and the church stands in one of the most stately streets of Rome.

10th November, 1644. We went to see Prince Ludovisio's villa, where was formerly the *Viridarium* of the poet, Sallust. The house is very magnificent, and the extent of the ground exceedingly large, considering that it is in a city; in every quarter of the garden are antique statues, and walks planted with cypress. To this garden belongs a house of retirement, built in the figure of a cross, after a particular ordonnance, especially the staircase. The whiteness and smoothness of the excellent pargeting was a thing I much observed, being almost as even and polished, as if it had been of marble. Above, is a fair prospect of the city. In one of the chambers hang two famous pieces of Bassano, the one a Vulcan, the other a Nativity; there is a German clock full of rare and extraordinary motions; and, in a little room below are many precious marbles, columns, urns, vases, and noble statues of porphyry, oriental alabaster, and other rare materials. About this fabric is an ample area, environed with sixteen vast jars of red earth, wherein the Romans used to preserve their oil, or wine rather, which they buried, and such as are properly called *testæ*. In the Palace I must never forget the famous statue of the Gladiator, spoken of by Pliny, so much followed by all the rare artists as the many copies testify, dispersed

through almost all Europe, both in stone and metal. There is also a Hercules, a head of porphyry, and one of Marcus Aurelius. In the villa-house is a man's body flesh and all, petrified, and even converted to marble, as it was found in the Alps, and sent by the Emperor to one of the Popes; it lay in a chest, or coffin, lined with black velvet, and one of the arms being broken, you may see the perfect bone from the flesh which remains entire. The Rape of Proserpine, in marble, is of the purest white, the work of Bernini. In the cabinet near it are innumerable small brass figures, and other curiosities. But what some look upon as exceeding all the rest, is a very rich bedstead (which sort of gross furniture the Italians much glory in, as formerly did our grandfathers in England in their inlaid wooden ones) inlaid with all sorts of precious stones and antique heads, onyxes, agates, and cornelians, esteemed to be worth 80 or 90,000 crowns. Here are also divers cabinets and tables of the Florence work, besides pictures in the gallery, especially the Apollo—a conceited chair to sleep in with the legs stretched out, with hooks, and pieces of wood to draw out longer or shorter.

From this villa, we went to see Signor Angeloni's study, who very courteously showed us such a collection of rare medals as is hardly to be paralleled; divers good pictures, and many outlandish and Indian curiosities, and things of nature.

From him, we walked to Monte Cavallo, heretofore called Mons Quirinalis, where we saw those two rare horses, the work of the rivals Phidias and Praxiteles, as they were sent to Nero (by Tiridates King) out of Armenia. They were placed on pedestals of white marble by Sextus V., by whom I suppose their injuries were repaired, and are governed by four naked slaves, like those at the foot of the Capitol. Here runs a most noble fountain, regarding four of the most stately streets for building and beauty to be seen in any city of Europe. Opposite to these statues is the Pope's summer palace, built by Gregory XIII.; and, in my opinion, it is, for largeness and the architecture, one of the most conspicuous in Rome, having a stately portico which leads round the court under columns, in the centre of which there runs a beautiful fountain. The chapel is incrustated with

such precious materials, that nothing can be more rich, or glorious, nor are the other ornaments and movables about it at all inferior. The hall is painted by Lanfranci, and others. The garden, which is called the Belvedere di Monte Cavallo, in emulation of that of the Vatican, is most excellent for air and prospect; its exquisite fountains, close walks, grotts, piscinas, or stews for fish, planted about with venerable cypresses, and refreshed with water-music, aviaries, and other rarities.

12th November, 1644. We saw Dioclesian's Baths, whose ruins testify the vastness of the original foundation and magnificence; by what M. Angelo took from the ornaments about it, 'tis said he restored the then almost lost art of architecture. This monstrous pile was built by the labor of the primitive Christians, then under one of the ten great persecutions. The Church of St. Bernardo is made out of one only of these ruinous cupolas, and is in the form of an urn with a cover.

Opposite to this, is the Fontana delle Therme, otherwise called *Fons Felix*; in it is a basso-relievo of white marble, representing Moses striking the rock, which is adorned with camels, men, women, and children drinking, as large as life; a work for the design and vastness truly magnificent. The water is conveyed no less than twenty-two miles in an aqueduct by Sextus V., *ex agro Columna*, by way of Præneste, as the inscription testifies. It gushes into three ample lavers raised about with stone, before which are placed two lions of a strange black stone, very rare and antique. Near this are the store-houses for the city's corn, and over against it the Church of St. Susanna, where were the gardens of Sallust. The *faciata* of this church is noble, the *soffitto* within gilded and full of pictures; especially famous is that of Susanna, by Baldassa di Bologna. The tribunal of the high altar is of exquisite work, from whose marble steps you descend under ground to the repository of divers Saints. The picture over this altar is the work of Jacomo Siciliano. The foundation is for Bernadine Nuns,

Santa Maria della Vittoria presents us with the most ravishing front. In this church was sung the Te Deum by Gregory XV., after the signal victory of the Emperor at Prague; the standards then taken still hang up, and the impress waving this motto over the Pope's arms, *Extir-*

*pentur.* I observed that the high altar was much frequented for an image of the Virgin. It has some rare statues, as Paul ravished into the third heaven, by Fiamingo, and some good pictures. From this, we bent toward Dioclesian's Baths, never satisfied with contemplating that immense pile, in building which 150,000 Christians were destined to labor fourteen years, and were then all murdered. Here is a monastery of Carthusians, called Santa Maria degli Angeli, the architecture of M. Angelo, and the cloister encompassing walls in an ample garden.

Mont Alto's villa is entered by a stately gate of stone built on the Viminalis, and is no other than a spacious park full of fountains, especially that which salutes us at the front; stews for fish; the cypress walks are so beset with statues, inscriptions, relievos, and other ancient marbles, that nothing can be more stately and solemn. The citron trees are uncommonly large. In the palace joining to it are innumerable collections of value. Returning, we stepped into St. Agnes church, where there is a tribunal of antique mosaic, and on the altar a most rich ciborio of brass, with a statue of St. Agnes in oriental alabaster. The church of Santa Constanza has a noble cupola. Here they showed us a stone ship borne on a column heretofore sacred to Bacchus, as the relieve intimates by the drunken emblems and instruments wrought upon it. The altar is of rich porphyry, as I remember. Looking back, we had the entire view of the Via Pia down to the two horses before the Monte Cavallo, before mentioned, one of the most glorious sights for state and magnificence that any city can show a traveler. We returned by Porta Pia, and the Via Salaria, near Campo Scelerato, in whose gloomy caves the wanton Vestals were heretofore immured alive.

Thence to Via Felix, a straight and noble street but very precipitous, till we came to the four fountains of Lepidus, built at the abutments of four stately ways, making an exact cross of right angles; and, at the fountains, are as many cumbent figures of marble, under very large niches of stone, the water pouring into huge basins. The church of St. Carlo is a singular fabric for neatness, of an oval design, built of a new white stone; the columns are worth notice. Under it is another church of a structure nothing less admirable.

Next, we came to Santa Maria Maggiore, built upon the Esqueline Mountain, which gives it a most conspicuous face to the street at a great distance. The design is mixed partly antique, partly modern. Here they affirm that the Blessed Virgin appearing, showed where it should be built 300 years since. The first pavement is rare and antique; so is the portico built by P. P. Eugenius II. The *ciborio* is the work of Paris Romano, and the tribunal of Mosaic.

We were showed in the church a *concha* of porphyry, wherein they say Patricius, the founder, lies. This is one of the most famous of the seven Roman Churches, and is, in my opinion at least, after St. Peter's, the most magnificent. Above all, for incomparable glory and materials, are the two chapels of Sextus V. and Paulus V. That of Sextus was designed by Dom. Fontana, in which are two rare great statues, and some good pieces of painting; and here they pretended to show some of the Holy Innocents' bodies slain by Herod: as also that renowned tabernacle of metal, gilt, sustained by four angels, holding as many tapers, placed on the altar. In this chapel is the statue of Sextus, in copper, with basso-relievos of most of his famous acts, in Parian marble; but that of P. Paulus, which we next entered, opposite to this, is beyond all imagination glorious, and above description. It is so encircled with agates, and other most precious materials, as to dazzle and confound the beholders. The basso-relievos are for the most part of pure snowy marble, intermixed with figures of molten brass, double gilt, on *lapis lazuli*. The altar is a most stupendous piece; but most incomparable is the cupola painted by Giuseppe Rheni, and the present Baglioni, full of exquisite sculptures. There is a most sumptuous *sacristia*; and the piece over the altar was by the hand of St. Luke; if you will believe it. Paulus V. hath here likewise built two other altars; under the one lie the bones of the Apostle, St. Matthias. In another oratory, is the statue of this Pope, and the head of the Congo Ambassador, who was converted at Rome, and died here. In a third chapel, designed by Michael Angelo, lie the bodies of Platina, and the Cardinal of Toledo, Honorius III., Nicephorus IV., the ashes of St. Hierom, and many others. In that of Sextus V., before mentioned, was

showed us part of the crib in which Christ was swaddled at Bethlehem; there is also the statue of Pius V.; and going out at the further end, is the resurrection of Lazarus, by a very rare hand. In the portico, is this late inscription: "*Cardinal Antonio Barberino Archiepiscopo, arcam marmoream quæ Christianorum pietas exsculpsit, laborante sub Tyranno ecclesiæ, ut esset loci sanctitate venerabilior, Francis Gualdus Arm. Eques S. Stephani à suis ædibus huc transtulit et ornavit, 1632.*" Just before this portico, stands a very sublime and stately Corinthian column, of white marble, translated hither for an ornament from the old Temple of Peace, built by Vespasian, having on the plinth of the capital the image of our Lady, gilt on metal; at the pedestal runs a fountain. Going down the hill, we saw the obelisk taken from the Mausoleum of Augustus, and erected in this place by Domenico Fontana, with this epigraph: "*Sextus V. Pont. Max. Obeliscum ex Egypto advectum, Augusti in Mausoleo dicatum, eversum deinde et in plures confractum partes, in via ad S. Rochum jacentem, in pristinam faciem restitutum Salutiferæ Cruci feliciter hinc erigijussit, anno MDLXXXVIII, Pont. III*"; and so we came weary to our lodgings.

At the foot of this hill, is the church of St. Prudentia, in which is a well, filled with the blood and bones of several martyrs, but grated over with iron, and visited by many devotees. Near this stands the church of her sister, S. Praxedes, much frequented for the same reason. In a little obscure place, canceled in with iron work, is the pillar, or stump, at which they relate our Blessed Savior was scourged, being full of bloody spots, at which the devout sex are always rubbing their chaplets, and convey their kisses by a stick having a tassel on it. Here, besides a noble statue of St. Peter, is the tomb of the famous Cardinal Cajetan, an excellent piece; and here they hold that St. Peter said his first mass at Rome, with the same altar and the stone he knelt on, he having been first lodged in this house, as they compute about the forty-fourth year of the Incarnation. They also show many relics, or rather rags, of his mantle. St. Laurence in Panisperna did next invite us, where that martyr was cruelly broiled on the gridiron, there yet remaining. St. Bridget is buried in this church under a stately monument. In the front of the pile is the suffering of St. Laurence painted

*afresco* on the wall. The fabric is nothing but Gothic. On the left is the *Therma Novatii*; and, on the right, *Agrip-pina's Lavacrum*.

14th November, 1644. We passed again through the stately Capitol and Campo Vaccino toward the Amphitheater of Vespasian, but first stayed to look at Titus's Triumphal Arch, erected by the people of Rome, in honor of his victory at Jerusalem; on the left hand whereof he is represented drawn in a chariot with four horses abreast; on the right hand, or side of the arch within, is sculptured in figures, or basso-relievo as big as the life (and in one entire marble) the Ark of the Covenant, on which stands the seven-branched candlestick described in Leviticus, as also the two Tables of the Law, all borne on men's shoulders by the bars, as they are described in some of St. Hierom's bibles; before this, go many crowned and laureated figures, and twelve Roman *fascies* with other sacred vessels. This much confirmed the idea I before had; and therefore, for the light it gave to the Holy History, I caused my painter, Carlo, to copy it exactly. The rest of the work of the Arch is of the noblest, best understood *composita*; and the inscription is this, in capital letters:

S. P. Q. R.

D. TITO, D. VESPASIANI, F. VESPASIANI AVGVSTO.

Santa Maria Nova is on the place where they told us Simon Magus fell out of the air at St. Peter's prayer, and burst himself to pieces on a flint. Near this is a marble monument, erected by the people of Rome in memory of the Pope's return from Avignon.

Being now passed the ruins of Meta-Sudante (which stood before the Colosseum, so called, because there once stood here the statue of Commodus provided to refresh the gladiators), we enter the mighty ruins of the Vespasian Amphitheatre, begun by Vespasian, and finished by that excellent prince, Titus. It is 830 Roman palms in length (*i. e.* 130 paces), 90 in breadth at the area, with caves for the wild beasts which used to be baited by men instead of dogs; the whole oval periphery 2888½ palms, and capable of containing 87,000 spectators with ease and all accommodation: the three rows of circles are yet entire; the first was for the senators, the middle for

the nobility, the third for the people. At the dedication of this place were 5,000 wild beasts slain in three months during which the feast lasted, to the expense of ten millions of gold. It was built of Tiburtine stone, a vast height, with the five orders of architecture, by 30,000 captive Jews. It is without, of a perfect circle, and was once adorned thick with statues, and remained entire, till of late that some of the stones were carried away to repair the city walls and build the Farnesian palace. That which still appears most admirable is, the contrivance of the porticos, vaults, and stairs, with the excessive altitude, which well deserves this distich of the poet:

*"Omnis Casareo cedat labor Amphitheatro;  
Unum pro cunctis fama loquatur opus."*

Near it is a small chapel called Santa Maria della Pietà nel Colisseo, which is erected on the steps, or stages, very lofty at one of its sides, or ranges, within, and where there lives only a melancholy hermit. I ascended to the very top of it with wonderful admiration.

The Arch of Constantine the Great is close by the Meta-Sudante, before mentioned, at the beginning of the Via Appia, on one side Monte Celio, and is perfectly entire, erected by the people in memory of his victory over Maxentius, at the Pons Milvius, now Ponte Mole. In the front is this inscription:

IMP. CAES. FL. CONSTANTINO MAXIMO  
P. F. AVGUSTO S. P. Q. R.  
QVOD INSTINCTV DIVINITATIS MENTIS  
MAGNITVDINE CVM EXERCITV SVO  
TAM DE TYRANNO QVAM DE OMNI EIVS  
FACTIONE VNO TEMPORE IVSTIS  
REMPVBLICAM VLTVS EST ARMIS  
ARCVN TRIVMPHIS INSIGNEM DICAVIT.

Hence, we went to St. Gregorio, in Monte Celio, where are many privileged altars, and there they showed us an arm of that saint, and other relics. Before this church stands a very noble portico.

15th November, 1644. Was very wet, and I stirred not out, and the 16th I went to visit Father John, Provincial of the Benedictines.

17th November, 1644. I walked to Villa Borghese, a house and ample garden on Mons Pincius, yet somewhat without the city walls, circumscribed by another wall full of small turrets and banqueting-houses; which makes it appear at a distance like a little town. Within it is an elysium of delight, having in the centre of it a noble palace; but the entrance of the garden presents us with a very glorious fabric, or rather door-case, adorned with divers excellent marble statues. This garden abounded with all sorts of delicious fruit and exotic simples, fountains of sundry inventions, groves, and small rivulets. There is also adjoining to it a vivarium for ostriches, peacocks, swans, cranes, etc., and divers strange beasts, deer, and hares. The grotto is very rare, and represents, among other devices, artificial rain, and sundry shapes of vessels, flowers, etc.; which is effected by changing the heads of the fountains. The groves are of cypress, laurel, pine, myrtle, and olive. The four sphinxes are very antique, and worthy observation. To this is a volary, full of curious birds. The house is square with turrets, from which the prospect is excellent toward Rome, and the environing hills, covered as they now are with snow, which indeed commonly continues even a great part of the summer, affording sweet refreshment. Round the house is a baluster of white marble, with frequent jettos of water, and adorned with a multitude of statues. The walls of the house are covered with antique incrustations of history, as that of Curtius, the Rape of Europa, Leda, etc. The cornices above consist of fruit-ages and festoons, between which are niches furnished with statues, which order is observed to the very roof. In the lodge, at the entry, are divers good statues of Consuls, etc., with two pieces of field artillery upon carriages, (a mode much practiced in Italy before the great men's houses) which they look on as a piece of state more than defense. In the first hall within, are the twelve Roman Emperors, of excellent marble; between them stand porphyry columns, and other precious stones of vast height and magnitude, with urns of oriental alabaster. Tables of pietra-commessa: and here is that renowned Diana which Pompey worshiped, of eastern marble: the most incomparable Seneca of touch, bleeding in an huge vase of porphyry, resembling the drops of

his blood; the so famous Gladiator, and the Hermaphrodite upon a quilt of stone. The new piece of Daphne, and David, of Cavaliero Bernini, is observable for the pure whiteness of the stone, and the art of the statuary plainly stupendous. There is a multitude of rare pictures of infinite value, by the best masters; huge tables of porphyry, and two exquisitely wrought vases of the same. In another chamber, are divers sorts of instruments of music: among other toys that of a satyr, which so artificially expressed a human voice, with the motion of eyes and head, that it might easily fright one who was not prepared for that most extravagant sight. They showed us also a chair that catches fast any one who sits down in it, so as not to be able to stir out, by certain springs concealed in the arms and back thereof, which at sitting down surprises a man on the sudden, locking him in by the arms and thighs, after a true treacherous Italian guise. The perspective is also considerable, composed by the position of looking-glasses, which render a strange multiplication of things resembling divers most richly furnished rooms. Here stands a rare clock of German work; in a word, nothing but what is magnificent is to be seen in this Paradise.

The next day, I went to the Vatican, where, in the morning, I saw the ceremony of Pamfilio, the Pope's nephew, receiving a Cardinal's hat; this was the first time I had seen his Holiness *in pontificalibus*. After the Cardinals and Princes had met in the consistory, the ceremony was in the Pope's chapel, where he was at the altar invested with most pompous rites.

19th November, 1644. I visited St. Peter's, that most stupendous and incomparable Basilica, far surpassing any now extant in the world, and perhaps, Solomon's Temple excepted, any that was ever built. The largeness of the piazza before the portico is worth observing, because it affords a noble prospect of the church, not crowded up, as for the most part is the case in other places where great churches are erected. In this is a fountain, out of which gushes a river rather than a stream which, ascending a good height, breaks upon a round emboss of marble into millions of pearls that fall into the subjacent basins with great noise; I esteem this one of the goodliest fountains I ever saw.

Next is the obelisk transported out of Egypt, and dedicated by Octavius Augustus to Julius Cæsar, whose ashes it formerly bore on the summit; but, being since overturned by the barbarians, was re-erected with vast cost and a most stupendous invention by Domenico Fontana, architect to Sextus V. The obelisk consists of one entire square stone without hieroglyphics, in height seventy-two feet, but comprehending the base and all it is 108 feet high, and rests on four lions of gilded copper, so as you may see through the base of the obelisk and plinth of the pedestal.

Upon two faces of the obelisk is engraven

DIVO CAES. DIVI  
IVLII F. AVGVSTO  
TI. CAES. DIVI AVG.  
F. AVGVS. SACRVM.

It now bears on the top a cross in which it is said that Sextus V. inclosed some of the holy wood; and under it is to be read by good eyes:

SANCTISSIMAE CRVCI  
SEXTVS V. PONT. MAX.  
CONSECRAVIT.  
E. PRIORE SEDE AVVLSVM  
ET CAESS. AVG. AC TIB.  
I. L. ABLATUM M.D.LXXXVI.

On the four faces of the base below:

I. CHRISTVS VINCIT.  
CHRISTVS REGNAT.  
CHRISTVS IMPERAT.  
CHRISTVS AB OMNI MALO  
PLEBEM SVAM DEFENDAT.

2. SEXTVS V. PONT. MAX.  
OBELISCVM VATICANVM DIIS GENTIVM  
IMPIO CVLTV DICA'TVM  
AD APOSTOLORVM LIMINA  
OPEROSO LABORE TRANSTVLIT  
AN. M.D.LXXXVI. PONT. II.

3. ECCE CRUX DOMINI  
FVGITE PARTES  
ADVERSAE  
VINCIT LEO  
DE TRIBV IVDA.

4. SEXTVS V. PONT. MAX.  
CRVCI INVICTAE  
OBELISCVM VATICANVM  
AB IMPIA SVPERSTITIONE  
EXPIATVM IVSTIVS  
ET FELICITVS CONSECRAVIT  
AN. M.D.L.XXXVI. PONT. II.

A little lower:

DOMINICVS FONTANA EX PAGO MILIAGRI NOVOCOMENSIS  
TRANSTVLIT ET EREXIT.

It is reported to have taken a year in erecting, to have cost 37,975 crowns, the labor of 907 men, and 75 horses: this being the first of the four Egyptian obelisks set up at Rome, and one of the forty-two brought to the city out of Egypt, set up in several places, but thrown down by the Goths, Barbarians, and earthquakes. Some coaches stood before the steps of the ascent, whercof one, belonging to Cardinal Medici, had all the metal work of massy silver, viz, the bow behind and other places. The coaches at Rome, as well as covered wagons also much in use, are generally the richest and largest I ever saw. Before the *facciata* of the church is an ample pavement. The church was first begun by St. Anacletus, when rather a chapel, on a foundation, as they give out, of Constantine the Great, who, in honor of the Apostles, carried twelve baskets full of sand to the work. After him, Julius II. took it in hand, to which all his successors have contributed more or less.

The front is supposed to be the largest and best-studied piece of architecture in the world; to this we went up by four steps of marble. The first entrance is supported by huge pilasters; the *volto* within is the richest possible, and overlaid with gold. Between the five large anti-ports are columns of enormous height and compass, with as many gates of brass, the work and

sculpture of Pollaivola, the Florentine, full of cast figures and histories in a deep relievo. Over this runs a terrace of like amplitude and ornament, where the Pope, at solemn times, bestows his Benediction on the vulgar. On each side of this portico are two *campaniles*, or towers, whereof there was but one perfected, of admirable art. On the top of all, runs a balustrade which edges it quite round, and upon this at equal distances are Christ and the twelve Disciples of gigantic size and stature, yet below showing no greater than the life. Entering the church, admirable is the breadth of the *volto*, or roof, which is all carved with foliage and roses overlaid with gold in nature of a deep basso-relievo, à *l'antique*. The nave, or body, is in form of a cross, whereof the foot-part is the longest; and, at the *internodium* of the transept, rises the cupola, which being all of stone and of prodigious height is more in compass than that of the Pantheon (which was the largest among the old Romans, and is yet entire) or any other known. The inside, or concave, is covered with most exquisite Mosaic, representing the Celestial Hierarchy, by Giuseppe d'Arpino, full of stars of gold; the convex, or outside, exposed to the air, is covered with lead, with great ribs of metal double gilt (as are also the ten other lesser cupolas, for no fewer adorn this glorious structure), which gives a great and admirable splendor in all parts of the city. On the summit of this is fixed a brazen globe gilt, capable of receiving thirty-five persons. This I entered, and engraved my name among other travelers. Lastly, is the Cross, the access to which is between the leaden covering and the stone convex, or arch-work; a most truly astonishing piece of art! On the battlements of the church, also all overlaid with lead and marble, you would imagine yourself in a town, so many are the cupolas, pinnacles, towers, juttings, and not a few houses inhabited by men who dwell there, and have enough to do to look after the vast reparations which continually employ them.

Having seen this, we descended into the body of the church, full of collateral chapels and large oratories, most of them exceeding the size of ordinary churches; but the principal are four incrustated with most precious marbles and stones of various colors, adorned with an infinity of

statues, pictures, stately altars, and innumerable relics. The altar-piece of St. Michael being of Mosaic, I could not pass without particular note, as one of the best of that kind. The chapel of Gregory XIII., where he is buried, is most splendid. Under the cupola, and in the center of the church, stands the high altar, consecrated first by Clement VIII., adorned by Paul V., and lately covered by Pope Urban VIII.; with that stupendous canopy of Corinthian brass, which heretofore was brought from the Pantheon; it consists of four wreathed columns, partly channelled and encircled with vines, on which hang little *puti* birds and bees (the arms of the *Barberini*), sustaining a *baldacchino* of the same metal. The four columns weigh an hundred and ten thousand pounds, all over richly gilt; this, with the pedestals, crown, and statues about it, form a thing of that art, vastness, and magnificence, as is beyond all that man's industry has produced of the kind; it is the work of Bernini, a Florentine sculptor, architect, painter, and poet, who, a little before my coming to the city, gave a public opera (for so they call shows of that kind), wherein he painted the scenes, cut the statues, invented the engines, composed the music, writ the comedy, and built the theater. Opposite to either of these pillars, under those niches which, with their columns, support the weighty cupola, are placed four exquisite statues of Parian marble, to which are four altars; that of St. Veronica, made by Fra. Mochi, has over it the reliquary, where they showed us the miraculous *Sudarium* indued with the picture of our Savior's face, with this inscription: "*Salvatoris imaginem Veronicæ Sudario exceptam ut loci majestas decentèr custodiret, Urbanus VIII. Pont. Max. Marmoreum signum et Altare addidit, Conditorium extruxit et ornavit.*"

Right against this is that of Longinus, of a Colossean magnitude, also by Bernini, and over him the conservatory of the iron lance inserted in a most precious crystal, with this epigraph: "*Longini Lanceam quam Innocentius VIII. à Bajazete Turcarum Tyranno accepit, Urbanus VIII. statum apposuit, et Sacello substructo, in exornatum Conditorium transtulit.*"

The third chapel has over the altar the statue of our countrywoman, St. Helena, the mother of Constantine the Great; the work of Boggi, an excellent sculptor; and here

is preserved a great piece of the pretended wood of the holy cross, which she is said to have first detected miraculously in the Holy Land. It was placed here by the late Pope with this inscription: "*Partem Crucis quam Helena Imperatrix à Calvario in Urbem adduxit, Urbanus VIII. Pont. Max. à Sissorianâ Basilicâ desumptam, additis arâ et statud, hîc in Vaticano collocavit.*"

The fourth hath over the altar, and opposite to that of St. Veronica, the statue of St. Andrew, the work of Fiamingo, admirable above all the other; above is preserved the head of that Apostle, richly enchased. It is said that this excellent sculptor died mad to see his statue placed in a disadvantageous light by Bernini, the chief architect, who found himself outdone by this artist. The inscription over it is this:

*"St. Andreæ caput quod Pius II. ex Achaiâ in Vaticanum asportandum curavit, Urbanus VIII. novis hic ornamentis decoratum sacrisque statuae ac Sacelli honoribus coli voluit."*

The relics showed and kept in this church are without number, as are also the precious vessels of gold, silver, and gems, with the vests and services to be seen in the Sacristy, which they showed us. Under the high altar is an ample grot inlaid with *pietra-commessa*, wherein half of the bodies of St. Peter and St. Paul are preserved; before hang divers great lamps of the richest plate, burning continually. About this and contiguous to the altar, runs a balustrade, in form of a theater, of black marble. Toward the left, as you go out of the church by the portico, a little beneath the high altar, is an old brass statue of St. Peter sitting, under the soles of whose feet many devout persons rub their heads, and touch their chaplets. This was formerly cast from a statue of Jupiter Capitolinus. In another place, stands a column grated about with iron, whereon they report that our Blessed Savior was often wont to lean as he preached in the Temple. In the work of the reliquary under the cupola there are eight wreathed columns brought from the Temple of Solomon. In another chapel, they showed us the chair of St. Peter, or, as they name it, the Apostolical Throne. But among all the chapels the one most glorious has for an altar-piece a Madonna bearing a dead Christ on her knees, in white

marble, the work of Michael Angelo. At the upper end of the Cathedral, are several stately monuments, especially that of Urban VIII. Round the cupola, and in many other places in the church, are confession seats, for all languages, Hebrew, Greek, Latin, Spanish, Italian, French, English, Irish, Welsh, Slavonian, Dutch, etc., as it is written on their friezes in golden capitals, and there are still at confessions some of all nations. Toward the lower end of the church, and on the side of a vast pillar sustaining a weighty roof, is the *depositum* and statue of the Countess Matilda, a rare piece, with basso-relievos about it of white marble, the work of Bernini. Here are also those of Sextus IV. and Paulus III., etc. Among the exquisite pieces in this sumptuous fabric is that of the ship with St. Peter held up from sinking by our Savior; the emblems about it are the Mosaic of the famous Giotto, who restored and made it perfect after it had been defaced by the Barbarians. Nor is the pavement under the cupola to be passed over without observation, which with the rest of the body and walls of the whole church, are all inlaid with the richest of *pietra-commessa*, in the most splendid colors of polished marbles, agates, serpentine, porphyry, calcedon, etc., wholly incrustated to the very roof. Coming out by the portico at which we entered, we were shown the Porta Santa, never opened but at the year of jubilee. This glorious foundation hath belonging to it thirty canons, thirty-six beneficiates, twenty-eight clerks beneficed, with innumerable chaplains, etc., a Cardinal being always archpriest; the present Cardinal was Francisco Barberini, who also styled himself Protector of the English, to whom he was indeed very courteous.

20th November, 1644. I went to visit that ancient See and Cathedral of St. John di Laterano, and the holy places thereabout. This is a church of extraordinary devotion, though, for outward form, not comparable to St. Peter's, being of Gothic ordonnance. Before we went into the cathedral, the Baptistery of St. John Baptist presented itself, being formerly part of the Great Constantine's palace, and, as it is said, his chamber where by St. Silvester he was made a Christian. It is of an octagonal shape, having before the entrance eight fair pillars of rich porphyry, each of one entire piece, their

capitals of divers orders, supporting lesser columns of white marble, and these supporting a noble cupola, the molding whereof is excellently wrought. In the chapel which they affirm to have been the lodging place of this Emperor, all women are prohibited from entering, for the malice of Herodias who caused him to lose his head. Here are deposited several sacred relics of St. James, Mary Magdalen, St. Matthew, etc., and two goodly pictures. Another chapel, or oratory near it, is called St. John the Evangelist, well adorned with marbles and tables, especially those of Cavalière Giuseppe, and of 'Tempesta, in fresco. We went hence into another called St. Venantius, in which is a tribunal all of Mosiac in figures of Popes. Here is also an altar of the Madonna, much visited, and divers Sclavonish saints, companions of Pope John IV. The portico of the church is built of materials brought from Pontius Pilate's house in Jerusalem.

The next sight which attracted our attention, was a wonderful concourse of people at their devotions before a place called *Scala Sancta*, to which is built a noble front. Entering the portico, we saw those large marble stairs, twenty-eight in number, which are never ascended but on the knees, some lip-devotion being used on every step; on which you may perceive divers red specks of blood under a grate, which they affirm to have been drops of our Blessed Savior, at the time he was so barbarously misused by Herod's soldiers; for these stairs are reported to have been translated hither from his palace in Jerusalem. At the top of them is a chapel, whereat they enter (but we could not be permitted) by gates of marble, being the same our Savior passed when he went out of Herod's house. This they name the *Sanctum Sanctorum*, and over it we read this epigraph:

*Non est in toto sanctor orbe locus.*

Here, through a grate, we saw that picture of Christ painted (as they say) by the hand of St. Luke, to the life. Descending again, we saw before the church the obelisk, which is indeed most worthy of admiration. It formerly lay in the Circo Maximo, and was erected here by Sextus V., in 1587, being 112 feet in height without the base or pedestal; at the foot nine and a half one way, and eight the other. This pillar was first brought

from Thebes at the utmost confines of Egypt, to Alexandria, from thence to Constantinople, thence to Rome, and is said by Ammianus Marcellinus to have been dedicated to Rameses, King of Egypt. It was transferred to this city by Constantine the son of the Great, and is full of hieroglyphics, serpents, men, owls, falcons, oxen, instruments, etc., containing (as Father Kircher the Jesuit will shortly tell us in a book which he is ready to publish) all the recondite and abstruse learning of that people. The vessel, galley, or float, that brought it to Rome so many hundred leagues, must needs have been of wonderful bigness and strange fabric. The stone is one and entire, and (having been thrown down) was erected by the famous Dom. Fontana, for that magnificent Pope, Sextus V., as the rest were; it is now cracked in many places, but solidly joined. The obelisk is thus inscribed at the several faciâtas:

*Fl. Constantinus Augustus, Constantini Augusti F. Obeliscum à patre suo motum diuq; Alexandria jacentem, trecentorum remigum impositum navì mirandæ vastitatis per mare Tyberinq; magnis molibus Romam convectum in Circo Max. ponendum S.P. Q.R.D.D.*

On the second square:

*Fl. Constantinus Max: Aug: Christianæ fidei Vindex & As-  
terior Obeliscum ab Ægyptio Rege impuro voto Soli dicatum, sedi-  
bus avulsum suis per Nilum transfer. Alexandriam, ut Novam  
Romam ab se tunc conditam eo decoraret monumento.*

On the third:

*Sextus V. Pontifex Max: Obeliscum hunc specie eximîâ temporum  
calamitate fractum, Circi Maximi ruinis humo, limoq; altè demer-  
sum, multâ impensâ extraxit, hunc in locum magno labore transtulit,  
formâq; pristinâ accuratè vestitum, Cruci invictissimæ dicavit  
anno M.D.LXXXVIII. Pont. IIII.*

On the fourth:

*Constantinus per Crucem Victor à Silvestro hæc Baptisatus Cru-  
cis gloriam propagavit.*

Leaving this wonderful monument (before which is a stately public fountain, with a statue of St. John in the middle of it), we visited His Holiness's palace, being a little on the left hand, the design of Fontana, architect to Sextus V. This I take to be one of the best palaces

in Rome; but not staying we entered the church of St. John di Laterano, which is properly the Cathedral of the Roman See, as I learned by these verses engraven upon the architrave of the portico:

*Dogmate Papali datur, et simul Imperiali  
Quòd sim cunctarum mater caput Ecclesiarum  
Hinc Salvatoris cœlestia regna datoris  
Nomine, Sanxerunt, cum cuncta peracta fuerunt;  
Sic vos ex toto conversi supplice voto  
Nostra quòd hæc ædes; tibi Christe sit inclyta sedes.*

It is called Lateran, from a noble family formerly dwelling it seems hereabouts, on Mons Cælius. The church is Gothic, and hath a stately tribunal; the paintings are of Pietro Pisano. It was the first church that was consecrated with the ceremonies now introduced, and where altars of stone supplied those of wood heretofore in use, and made like large chests for the easier removal in times of persecution; such an altar is still the great one here preserved, as being that on which (they hold) St. Peter celebrated mass at Rome; for which reason none but the Pope may now presume to make that use of it. The pavement is of all sorts of precious marbles, and so are the walls to a great height, over which it is painted *à fresco* with the life and acts of Constantine the Great, by most excellent masters. The organs are rare, supported by four columns. The *soffitto* is all richly gilded, and full of pictures. Opposite to the porta is an altar of exquisite architecture, with a tabernacle on it all of precious stones, the work of Targoni; on this is a *cana* of plate, the invention of Curtius Vanni, of exceeding value; the tables hanging over it are of Giuseppe d' Arpino. About this are four excellent columns transported out of Asia by the Emperor Titus, of brass, double gilt, about twelve feet in height; the walls between them are incrustured with marble and set with statues in niches, the vacuum reported to be filled with holy earth, which St. Helena sent from Jerusalem to her son, Constantine, who set these pillars where they now stand. At one side of this is an oratory full of rare paintings and monuments, especially those of the great Connestabile Colonna. Out of this we came into the *sacristia*, full of good pictures of Albert and others. At the end of the church is a flat stone supported by four

pillars which they affirm to have been the exact height of our Blessed Savior, and say they never fitted any mortal man that tried it, but he was either taller or shorter; two columns of the veil of the Temple which rent at his passion; the stone on which they threw lots for his seamless vesture; and the pillar on which the cock crowed, after Peter's denial; and, to omit no fine thing, the just length of the Virgin Mary's foot as it seems her shoemaker affirmed! Here is a sumptuous cross, beset with precious stones, containing some of the VERY wood of the holy cross itself; with many other things of this sort: also numerous most magnificent monuments, especially those of St. Helena, of porphyry; Cardinal Farneze; Martin I., of copper; the pictures of Mary Magdalen, Martin V., Laurentius Valla, etc., are of Gaetano; the Nunciata, designed by M. Angelo; and the great crucifix of Sermoneta. In a chapel at one end of the porch is a statue of Henry IV. of France, in brass, standing in a dark hole, and so has done many years; perhaps from not believing him a thorough proselyte. The two famous Œcumenical Councils were celebrated in this Church by Pope Simachus, Martin I., Stephen, etc.

Leaving this venerable church (for in truth it has a certain majesty in it), we passed through a fair and large hospital of good architecture, having some inscriptions put up by Barberini, the late Pope's nephew. We then went by St. Sylvia, where is a noble statue of St. Gregory P., begun by M. Angelo; a St. Andrew, and the bath of St. Cecilia. In this church are some rare paintings, especially that story on the wall of Guido Reni. Thence to St. Giovanni e Paula, where the friars are reputed to be great chemists. The choir, roof, and paintings in the *tribuna* are excellent.

Descending the Mons Cælius, we came against the vestiges of the Palazzo Maggiore, heretofore the Golden House of Nero; now nothing but a heap of vast and confused ruins, to show what time and the vicissitude of human things does change from the most glorious and magnificent to the most deformed and confused. We next went into St. Sebastian's Church, which has a handsome front: then we passed by the place where Romulus and Remus were taken up by Faustulus, the Forum

Romanum, and so by the edge of the Mons Palatinus; where we saw the ruins of Pompey's house, and the Church of St. Anacletus; and so into the Circus Maximus, heretofore capable of containing a hundred and sixty thousand spectators, but now all one entire heap of rubbish, part of it converted into a garden of pot herbs. We concluded this evening with hearing the rare voices and music at the Chiesa Nova.

21st November, 1644. I was carried to see a great virtuoso, Cavaliéro Pozzo, who showed us a rare collection of all kind of antiquities, and a choice library, over which are the effigies of most of our late men of polite literature. He had a great collection of the antique basso-relievos about Rome, which this curious man had caused to be designed in several folios: many fine medals; the stone which Pliny calls Enhydros; it had plainly in it the quantity of half a spoonful of water, of a yellow pebble color, of the bigness of a walnut. A stone paler than an amethyst, which yet he affirmed to be the true carbuncle, and harder than a diamond; it was set in a ring, without foil, or anything at the bottom, so as it was transparent, of a greenish yellow, more lustrous than a diamond. He had very pretty things painted on crimson velvet, designed in black, and shaded and heightened with white, set in frames; also a number of choice designs and drawings.

Hence we walked to the Suburra and *Ærarium Saturni*, where yet remain some ruins and an inscription. From thence to St. Pietro *in vinculis*, one of the seven churches on the Esquiline, an old and much-frequented place of great devotion for the relics there, especially the bodies of the seven Maccabean brethren, which lie under the altar. On the wall is a St. Sebastian, of mosaic, after the Greek manner: but what I chiefly regarded was, that noble sepulchre of Pope Julius II., the work of M. Angelo; with that never-sufficiently-to-be-admired statue of Moses, in white marble, and those of Vita Contemplativa and Activa, by the same incomparable hand. To this church belongs a monastery, in the court of whose cloisters grow two tall and very stately palm trees. Behind these, we walked a turn among the Baths of Titus, admiring the strange and prodigious receptacles for water, which the vulgar call the Setti Sali, now all in heaps.

22d November, 1644. Was the solemn and greatest ceremony of all the State Ecclesiastical, viz, the procession of the Pope (Innocent X.) to St. John di Laterano, which, standing on the steps of Ara Celi, near the Capitol, I saw pass in this manner:—First went a guard of Switzers to make way, and divers of the avant guard of horse carrying lances. Next followed those who carried the robes of the Cardinals, two and two; then the Cardinals mace bearers; the caudatari, on mules; the masters of their horse; the Pope's barber, tailor, baker, gardener, and other domestic officers, all on horseback, in rich liveries; the squires belonging to the Guard; five men in rich liveries led five noble Neapolitan horses, white as snow, covered to the ground with trappings richly embroidered; which is a service paid by the King of Spain for the kingdoms of Naples and Sicily, pretended feudatories to the Pope; three mules of exquisite beauty and price, trapped in crimson velvet; next followed three rich litters with mules, the litters empty; the master of the horse alone, with his squires; five trumpeters; the *armierieri extra muros*; the fiscal and consistorial advocates; *capellani*, *camerieri de honore*, *cubiculari* and chamberlains, called *secreti*.

Then followed four other *camerieri*, with four caps of the dignity-pontifical, which were Cardinals' hats carried on staves; four trumpets; after them a number of noble Romans and gentlemen of quality, very rich, and followed by innumerable *staffieri* and pages; the secretaries of the *chancellaria*, *abbreviatori-accoliti* in their long robes, and on mules; *auditori di rota*; the dean of the *roti* and master of the sacred palace, on mules, with grave but rich footclothes, and in flat episcopal hats; then went more of the Roman and other nobility and courtiers, with divers pages in most rich liveries on horseback; fourteen drums belonging to the Capitol; the marshals with their staves; the two syndics; the conservators of the city, in robes of crimson damask; the knight-gonfalonier and prior of the R. R., in velvet toques; six of his Holiness's mace bearers; then the captain, or governor, of the Castle of St. Angelo, upon a brave prancer; the governor of the city; on both sides of these two long ranks of Switzers, the masters of the ceremonies; the cross bearer on horseback, with two priests at each hand on foot; pages,

footmen, and guards, in abundance. Then came the Pope himself, carried in a litter, or rather open chair, of crimson velvet, richly embroidered, and borne by two stately mules; as he went he held up two fingers, blessing the multitude who were on their knees, or looking out of their windows and houses, with loud *vivas* and acclamations of felicity to their new Prince. This chair was followed by the master of his chamber, cup bearer, secretary, and physician; then came the Cardinal-Bishops, Cardinal-Priests, Cardinal-Deacons, Patriarchs, Archbishops, and Bishops, all in their several and distinct habits, some in red, others in green flat hats with tassels, all on gallant mules richly trapped with velvet, and led by their servants in great state and multitudes; after them, the apostolical protonotary, auditor, treasurer, and referendaries; lastly, the trumpets of the rear guard, two pages of arms in helmets with feathers, and carrying lances; two captains; the pontifical standard of the Church; the two *alferi*, or cornets, of the Pope's light horse, who all followed in armor and carrying lances; which, with innumerable rich coaches, litters, and people, made up the procession. What they did at St. John di Laterano, I could not see, by reason of the prodigious crowd; so I spent most of the day in viewing the two triumphal arches which had been purposely erected a few days before, and till now covered; the one by the Duke of Parma, in the Foro Romano, the other by the Jews in the Capitol, with flattering inscriptions. They were of excellent architecture, decorated with statues and abundance of ornaments proper for the occasion, since they were but temporary, and made up of boards, cloth, etc., painted and framed on the sudden, but as to outward appearance, solid and very stately. The night ended with fireworks. What I saw was that which was built before the Spanish Ambassador's house, in the Piazza del Trinita, and another, before that of the French. The first appeared to be a mighty rock, bearing the Pope's Arms, a dragon, and divers figures, which being set on fire by one who flung a rocket at it, kindled immediately, yet preserving the figure both of the rock and statues a very long time; insomuch as it was deemed ten thousand reports of squibs and crackers spent themselves in order. That before the French Ambassador's Palace was a Diana

drawn in a chariot by her dogs, with abundance of other figures as large as the life, which played with fire in the same manner. In the meantime, the windows of the whole city were set with tapers put into lanterns, or sconces, of several colored oiled paper, that the wind might not annoy them; this rendered a most glorious show. Besides these, there were at least twenty other fireworks of vast charge and rare art for their invention before divers Ambassadors, Princes, and Cardinals' Palaces, especially that on the Castle of St. Angelo, being a pyramid of lights, of great height, fastened to the ropes and cables which support the standard pole. The streets were this night as light as day, full of bonfires, cannon roaring, music playing, fountains running wine, in all excess of joy and triumph.

23d November, 1644. I went to the Jesuits' College again, the front whereof gives place to few for its architecture, most of its ornaments being of rich marble. It has within a noble portico and court, sustained by stately columns, as is the corridor over the portico, at the sides of which are the schools for arts and sciences, which are here taught as at the University. Here I heard Father Athanasius Kircher upon a part of Euclid, which he expounded. To this joins a glorious and ample church for the students; a second is not fully finished; and there are two noble libraries, where I was showed that famous wit and historian, Pamianus Strada. Hence we went to the house of Hippolito Vitellesco (afterward bibliothecary of the Vatican library), who showed us one of the best collections of statues in Rome, to which he frequently talks as if they were living, pronouncing now and then orations, sentences, and verses, sometimes kissing and embracing them. He has a head of Brutus scarred in the face by order of the Senate for killing Julius; this is much esteemed. Also a Minerva, and others of great value. This gentleman not long since purchased land in the kingdom of Naples, in hope, by digging the ground, to find more statues; which it seems so far succeeded, as to be much more worth than the purchase. We spent the evening at the Chiesa Nova, where was excellent music; but, before that began, the courteous fathers led me into a nobly furnished library, contiguous to their most beautiful convent.

28th November, 1644. I went to see the garden and house of the Aldobrandini, now Cardinal Borghese's. This palace is, for architecture, magnificence, pomp, and state, one of the most considerable about the city. It has four fronts, and a noble piazza before it. Within the courts, under arches supported by marble columns, are many excellent statues. Ascending the stairs, there is a rare figure of Diana, of white marble. The St. Sebastian and Hermaphrodite are of stupendous art. For paintings, our Savior's Head, by Correggio; several pieces of Raphael, some of which are small; some of Bassano Veronese; the Leda, and two admirable Venuses, are of Titian's pencil; so is the Psyche and Cupid; the head of St. John, borne by Herodias; two heads of Albert Durer, very exquisite. We were shown here a fine cabinet and tables of Florence work in stone. In the gardens are many fine fountains, the walls covered with citron trees, which, being rarely spread, invest the stone work entirely; and, toward the street, at a back gate, the port is so handsomely clothed with ivy as much pleased me. About this palace are many noble antique bassi-relievi: two especially are placed on the ground, representing armor, and other military furniture of the Romans; beside these, stand about the garden numerous rare statues, altars, and urns. Above all for antiquity and curiosity (as being the only rarity of that nature now known to remain) is that piece of old Roman painting representing the Roman *Sponsalia*, or celebration of their marriage, judged to be 1,400 years old, yet are the colors very lively, and the design very entire, though found deep in the ground. For this morsel of painting's sake only, it is said the Borghesi purchased the house, because this being on a wall in a kind of banquetting house in the garden, could not be removed, but passes with the inheritance.

29th November, 1644. I a second time visited the Medicean Palace, being near my lodging, the more exactly to have a view of the noble collections that adorn it, especially the bassi-relievi and antique friezes inserted about the stone work of the house. The Saturn, of metal, standing in the portico, is a rare piece; so is the Jupiter and Apollo, in the hall. We were now led into those rooms above we could not see before, full of incompar-

able statues and antiquities; above all, and haply preferable to any in the world, are the Two Wrestlers, for the inextricable mixture with each other's arms and legs is stupendous. In the great chamber is the Gladiator, whetting a knife; but the Venus is without parallel, being the masterpiece of one whose name you see graven under it in old Greek characters; nothing in sculpture ever approached this miracle of art. To this add Marcius, Gany-mede, a little Apollo playing on a pipe; some reliefs incrusting on the palace walls; and an antique *vas* of marble, near six feet high. Among the pictures may be mentioned the Magdalen and St. Peter, weeping. I pass over the cabinets and tables of *pietra commessa*, being the proper invention of the Florentines. In one of the chambers is a whimsical chair, which folded into so many varieties, as to turn into a bed, a bolster, a table, or a couch. I had another walk in the garden, where are two huge vases, or baths of stone.

I went further up the hill to the Pope's Palaces at Monte Cavallo, where I now saw the garden more exactly, and found it to be one of the most magnificent and pleasant in Rome. I am told the gardener is annually allowed 2,000 *scudi* for the keeping of it. Here I observed hedges of myrtle above a man's height; others of laurel, oranges, nay, of ivy and juniper; the close walks, and rustic grotto; a crypt, of which the laver, or basin, is of one vast, entire, antique porphyry, and below this flows a plentiful cascade; the steps of the grotto and the roofs being of rich Mosaic. Here are hydraulic organs, a fish pond, and an ample bath. From hence, we went to taste some rare Greco; and so home.

Being now pretty weary of continual walking, I kept within, for the most part, till the 6th of December; and, during this time, I entertained one Signor Alessandro, who gave me some lessons on the theorbo.

The next excursion was over the Tiber, which I crossed in a ferry-boat, to see the Palazzo di Ghisi, standing in Transtevere, fairly built, but famous only for the painting *à fresco* on the *volto* of the portico toward the garden; the story is the Amours of Cupid and Psyche, by the hand of the celebrated Raphael d'Urbino. Here you always see painters designing and copying after it, being esteemed one of the rarest pieces of that art in the

world; and with great reason. I must not omit that incomparable table of Galatea (as I remember), so carefully preserved in the cupboard at one of the ends of this walk, to protect it from the air, being a most lively painting. There are likewise excellent things of Baldassare, and others.

Thence we went to the noble house of the Duke of Bracciano, fairly built, with a stately court and fountain.

Next, we walked to St. Mary's Church, where was the *Taberna Meritoria*, where the old Roman soldiers received their triumphal garland, which they ever after wore. The high altar is very fair, adorned with columns of porphyry: here is also some mosaic work about the choir, and the Assumption is an esteemed piece. It is said that this church was the first that was dedicated to the Virgin at Rome. In the opposite piazza is a very sumptuous fountain.

12th December, 1644. I went again to St. Peter's to see the chapels, churches, and grotts under the whole church (like our St. Faith's under Paul's), in which lie interred a multitude of Saints, Martyrs, and Popes; among them our countryman, Adrian IV., (Nicholas Brekespere) in a chest of porphyry; Sir J. Chrysostom; Petronella; the heads of St. James minor, St. Luke, St. Sebastian, and our Thomas à Becket; a shoulder of St. Christopher; an arm of Joseph of Arimathea; Longinus; besides 134 more bishops, soldiers, princes, scholars, cardinals, kings, emperors, their wives; too long to particularize.

Hence we walked into the cemetery, called Campo Santo, the earth consisting of several ship-loads of mold, transported from Jerusalem, which consumes a carcass in twenty-four hours. To this joins that rare hospital, where once was Nero's circus; the next to this is the Inquisition-house and prison, the inside whereof, I thank God, I was not curious to see. To this joins His Holiness's Horseguards.

On Christmas-eve, I went not to bed, being desirous of seeing the many extraordinary ceremonies performed then in their churches, at midnight masses and sermons. I walked from church to church the whole night in admiration at the multitude of scenes and pageantry which the friars had with much industry and craft set out, to

catch the devout women and superstitious sort of people, who never parted without dropping some money into a vessel set on purpose; but especially observable was the puppetry in the Church of the Minerva, representing the Nativity. I thence went and heard a sermon at the Apollinare; by which time it was morning. On Christmas-day his Holiness sang mass, the artillery of St. Angelo went off, and all this day was exposed the cradle of our Lord.

29th December, 1644. We were invited by the English Jesuits to dinner, being their great feast of Thomas [à Becket] of Canterbury. We dined in their common refectory, and afterward saw an Italian comedy acted by their alumni before the Cardinals.

January, 1645. We saw pass the new officers of the people of Rome; especially, for their noble habits were most conspicuous, the three Consuls, now called Conservators, who take their places in the Capitol, having been sworn the day before between the hands of the Pope. We ended the day with the rare music at the Chiesa Nova.

6th January, 1645. Was the ceremony of our Savior's baptism in the Church of St. Athanasius, and at Ara Celi was a great procession, del Bambino, as they call it, where were all the magistrates, and a wonderful concourse of people.

7th January, 1645. A sermon was preached to the Jews, at Ponte Sisto, who are constrained to sit till the hour is done; but it is with so much malice in their countenances, spitting, humming, coughing, and motion, that it is almost impossible they should hear a word from the preacher. A conversion is very rare.

14th January, 1645. The heads of St. Peter and St. Paul are exposed at St. John Laterano.

15th January, 1645. The zitelle, or young wenches, which are to have portions given them by the Pope, being poor, and to marry them, walked in procession to St. Peter's, where the Veronica was shown.

I went to the Ghetto, where the Jews dwell as in a suburb by themselves; being invited by a Jew of my acquaintance to see a circumcision. I passed by the Piazza Judea, where their seraglio begins; for, being environed with walls, they are locked up every night.

In this place remains yet part of a stately fabric, which my Jew told me had been a palace of theirs for the ambassador of their nation, when their country was subject to the Romans. Being led through the Synagogue into a private house, I found a world of people in a chamber: by and by came an old man, who prepared and laid in order divers instruments brought by a little child of about seven years old in a box. These the man laid in a silver basin; the knife was much like a short razor to shut into the half. Then they burnt some incense in a censer, which perfumed the room all the while the ceremony was performing. In the basin was a little cap made of white paper like a capuchin's hood, not bigger than the finger: also a paper of a red astringent powder, I suppose of bole; a small instrument of silver, cleft in the middle at one end, to take up the prepuce withal; a fine linen cloth wrapped up. These being all in order, the women brought the infant swaddled, out of another chamber, and delivered it to the Rabbi, who carried and presented it before an altar, or cupboard, dressed up, on which lay the five Books of Moses, and the Commandments, a little unrolled. Before this, with profound reverence, and mumbling a few words, he waved the child to and fro awhile; then he delivered it to another Rabbi, who sat all this time upon a table. While the ceremony was performing, all the company fell singing a Hebrew hymn, in a barbarous tone, waving themselves to and fro; a ceremony they observe in all their devotions.—The Jews in Rome all wear yellow hats, live only upon brokerage and usury, very poor and despicable, beyond what they are in other territories of Princes where they are permitted.

18th January, 1645. I went to see the Pope's Palace, the Vatican, where he for the most part keeps his Court. It was first built by Pope Symmachus, and since augmented to a vast pile of building by his successors. That part of it added by Sextus V. is most magnificent. This leads us into divers terraces arched *sub dio*, painted by Raphael with the histories of the Bible, so esteemed, that artists come from all parts of Europe to make their studies from these designs. The foliage and grotesque about some of the compartments are admirable. In another room are represented at large, maps and plots of most countries in

the world, in vast tables, with brief descriptions. The stairs which ascend out of St. Peter's portico into the first hall, are rarely contrived for ease; these lead into the hall of Gregory XIII., the walls whereof, half way to the roof, are incrustcd with most precious marbles of various colors and works. So is also the pavement inlaid work; but what exceeds description is, the *volta*, or roof itself, which is so exquisitely painted, that it is almost impossible for the skillfullest eyes to discern whether it be the work of the pencil upon a flat, or of a tool cut deep in stone. The *Rota dentata*, in this admirable perspective, on the left hand as one goes out, the *Scetella*, etc., are things of art incomparable. Certainly this is one of the most superb and royal apartments in the world, much too beautiful for a guard of gigantic Switzers, who do nothing but drink and play at cards in it. Going up these stairs is a painting of St. Peter, walking on the sea toward our Savior.

Out of this I went into another hall, just before the chapel, called the *Sala del Conclave*, full of admirable paintings; among others is the Assassination of Coligni, the great [Protestant] French Admiral, murdered by the Duke of Guise, in the Parisian massacre at the nuptials of Henry IV. with Queen Margaret; under it is written, "*Coligni et sociorum cædes*:" on the other side, "*Rex Coligi necem probat.*"

There is another very large picture, under which is inscribed:

*"Alexander Papa III., Frederici Primi Imperatoris iram et impetum fugiens, abdidit se Venetijs; cognitum et à senatu perhonorificè susceptum, Othone Imperatoris filio navali prælio victo captog; Fredericus, pace facta, supplex adorat; fidem et obedientiam pollicitus. Ita Pontifici sua dignitas Venet. Reip. beneficio restituta MCLXXVIII."*\*

This inscription I the rather took notice of, because Urban VIII. had caused it to be blotted out during the difference between him and that State; but it was now restored and refreshed by his successor, to the great honor

\*Pope Alexander III., flying from the wrath and violence of the Emperor Frederick I., took shelter at Venice, where he was acknowledged, and most honorably received by the Senate. The Emperor's son, Otho, being conquered and taken in a naval battle, the Emperor, having made peace, became a suppliant to the Pope, promising fealty and obedience. Thus his dignity was restored to the Pontiff, by the aid of the Republic of Venice, MCLXXVIII.

of the Venetians. The Battle of Lepanto is another fair piece here.

Now we came into the Pope's chapel, so much celebrated for the Last Judgment painted by M. Angelo Buonarrotti. It is a painting in fresco, upon a dead wall at the upper end of the chapel, just over the high altar, of a vast design and miraculous fancy, considering the multitude of naked figures and variety of posture. The roof also is full of rare work. Hence, we went into the *sacristia* where were showed all the most precious vestments, copes, and furniture of the chapel. One priestly cope, with the whole suite, had been sent from one of our English Henrys, and is shown for a great rarity. There were divers of the Pope's pantoufles that are kissed on his foot, having rich jewels embroidered on the instep, covered with crimson velvet; also his tiara, or triple crown, divers miters, crosiers, etc., all bestudded with precious stones, gold, and pearl, to a very great value; a very large cross, carved (as they affirm) out of the holy wood itself; numerous utensils of crystal, gold, agate, amber, and other costly materials for the altar.

We then went into those chambers painted with the Histories of the burning of Rome, quenched by the procession of a Crucifix; the victory of Constantine over Maxentius; St. Peter's delivery out of Prison; all by Julio Romano, and are therefore called the Painters' Academy, because you always find some young men or other designing from them: a civility which is not refused in Italy, where any rare pieces of the old and best masters are extant, and which is the occasion of breeding up many excellent men in that profession.

The Sala Clementina's Suffito is painted by Cherubin Alberti, with an ample landscape of Paul Bril's.

We were then conducted into a new gallery, whose sides were painted with views of the most famous places, towns, and territories in Italy, rarely done, and upon the roof the chief Acts of the Roman Church since St. Peter's pretended See there. It is doubtless one of the most magnificent galleries in Europe.—Out of this we came into the Consistory, a noble room, the *volta* painted in grotesque, as I remember. At the upper end, is an elevated throne and a baldachin, or canopy of state, for his Holiness, over it.

From thence, through a very long gallery (longer, I think, than the French Kings at the Louvre), but only of bare walls, we were brought into the Vatican Library. This passage was now full of poor people, to each of whom, in his passage to St. Peter's, the Pope gave a *mezzo grosse* I believe they were in number near 1,500 or 2,000 persons.

This library is the most nobly built, furnished, and beautified of any in the world; ample, stately, light, and cheerful, looking into a most pleasant garden. The walls and roof are painted, not with antiques and grotesques, like our Bodleian at Oxford, but emblems, figures, diagrams, and the like learned inventions, found out by the wit and industry of famous men, of which there are now whole volumes extant. There were likewise the effigies of the most illustrious men of letters and fathers of the church, with divers noble statues, in white marble, at the entrance, viz., Hippolytus and Aristides. The General Councils are painted on the side walls. As to the ranging of the books, they are all shut up in presses of wainscot, and not exposed on shelves to the open air, nor are the most precious mixed among the more ordinary, which are showed to the curious only; such are those two Virgils written on parchment, of more than a thousand years old; the like, a Terence; the "Acts of the Apostles" in golden capital letters; Petrarch's "Epigrams," written with his own hand; also a Hebrew parchment, made up in the ancient manner, from whence they were first called "*Volumina*", with the Cornua; but what we English do much inquire after, the book which our Henry VIII. writ against Luther.\*

The largest room is 100 paces long; at the end is the gallery of printed books; then the gallery of the Duke of Urban's library, in which are MSS. of remarkable minia-

\*This very book, by one of those curious chances that occasionally happen, found its way into England some forty years ago, and was seen by the Editor of the early edition of this "Diary." It may be worth remarking that wherever, in the course of it, the title of "Defender of the Faith" was subjoined to the name of Henry, the Pope had drawn his pen through the title. The name of the King occurred in his own handwriting both at the beginning and end; and on the binding were the Royal Arms. Its possessor had purchased it in Italy for a few shillings from an old bookstall.

ture, and divers Chinese, Mexican, Samaritan, Abyssinian, and other oriental books.

In another wing of the edifice, 200 paces long, were all the books taken from Heidelberg, of which the learned Gruter, and other great scholars, had been keepers. These walls and *volte* are painted with representations of the machines invented by Domenico Fontana for erection of the obelisks; and the true design of Mahomet's sepulchre at Mecca.

Out of this we went to see the Conclave, where, during a vacancy, the Cardinals are shut up till they are agreed upon a new election; the whole manner whereof was described to us.

Hence we went into the Pope's Armory, under the library. Over the door is this inscription:

"URBANUS VIII. LITTERIS ARMA, ARMA LITTERIS."

I hardly believe any prince in Europe is able to show a more completely furnished library of Mars, for the quality and quantity, which is 40,000 complete for horse and foot, and neatly kept. Out of this we passed again by the long gallery, and at the lower end of it down a very large pair of stairs, round, without any steps as usually, but descending with an evenness so ample and easy, that a horse-litter, or coach, may with ease be drawn up; the sides of the vacuity are set with columns: those at Amboise, on the Loire, in France, are something of this invention, but nothing so spruce. By these, we descended into the Vatican gardens, called Belvedere, where entering first into a kind of court, we were showed those incomparable statues (so famed by Pliny and others) of Laocoon with his three sons embraced by a huge serpent, all of one entire Parian stone, very white and perfect, somewhat bigger than the life, the work of those three celebrated sculptors, Agesandrus, Polydorus, and Artemidorus, Rhodians; it was found among the ruins of Titus's baths, and placed here. Pliny says this statue is to be esteemed before all pictures and statues in the world; and I am of his opinion, for I never beheld anything of art approach it. Here are also those two famous images of Nilus with the children playing about him, and that of Tiber; Romulus and Remus with the Wolf; the dying Cleopatra; the Venus and Cupid, rare pieces;

the Mercury; Cybel Hercules; Apollo; Antinous: most of which are, for defense against the weather, shut up in niches with wainscot doors. We were likewise showed the relics of the Hadrian Moles, viz, the Pine, a vast piece of metal which stood on the summit of that mausoleum; also a peacock of copper, supposed to have been part of Scipio's monument.

In the garden without this (which contains a vast circuit of ground) are many stately fountains, especially two casting water into antique lavers, brought from Titus's baths; some fair grotts and water-works, that noble cascade where the ship dances, with divers other pleasant inventions, walks, terraces, meanders, fruit trees, and a most goodly prospect over the greatest part of the city. One fountain under the gate I must not omit, consisting of three jettos of water gushing out of the mouths or proboscides of bees (the arms of the late Pope), because of the inscription:

*"Quid miraris Apem, quae mel de floribus haurit?  
Si tibi mellitam gutture fundit aquam."*

23d January, 1645. We went without the walls of the city to visit St. Paul's, to which place it is said the Apostle bore his own head after Nero had caused it to be cut off. The church was founded by the great Constantine; the main roof is supported by 100 vast columns of marble, and the Mosaic work of the great arch is wrought with a very ancient story A° 440; as is likewise that of the *facciata*. The gates are brass, made at Constantinople in 1070, as you may read by those Greek verses engraven on them. The church is near 500 feet long and 258 in breadth, and has five great aisles joined to it, on the basis of one of whose columns is this odd title: "*Fl. Eugenius Asellus C. C. Præf. Urbis V. S. I. reparavit.*" Here they showed us that miraculous Crucifix which they say spake to St. Bridget: and, just before the Ciborio, stand two excellent statues. Here are buried part of the bodies of St. Paul and St. Peter. The pavement is richly interwoven with precious Oriental marbles about the high altar, where are also four excellent paintings, whereof one, representing the stoning of St. Stephen, is by the hand of a Bolognian lady, named Lavinia. The tabernacle on this altar is of excellent architecture, and the

pictures in the Chapel del Sacramento are of Lanfranco. Divers other relics there be also in this venerable church, as a part of St. Anna; the head of the Woman of Samaria; the chain which bound St. Paul, and the *eculeus* used in tormenting the primitive Christians. The church stands in the Via Ositensis, about a mile from the walls of the city, separated from many buildings near it except the Trie Fontana, to which (leaving our coach) we walked, going over the mountain or little rising, upon which story says a hundred seventy and four thousand Christians had been martyred by Maximianus, Dioclesian, and other bloody tyrants. On this stand St. Vincent's and St. Anastasius; likewise the Church of St. Maria Scala del Cielo, in whose Tribuna is a very fair Mosaic work. The Church of the Trie Fontana (as they are called) is perfectly well built, though but small (whereas that of St. Paul is but Gothic), having a noble cupola in the middle; in this they show the pillar to which St. Paul was bound, when his head was cut off, and from whence it made three prodigious leaps, where there immediately broke out the three remaining fountains, which give denomination to this church. The waters are reported to be medicinal: over each is erected an altar and a chained ladle, for better tasting of the waters. That most excellent picture of St. Peter's Crucifixion is of Guido.

25th January, 1645. I went again to the Palazzo Farnese, to see some certain statues and antiquities which, by reason of the Major-Domo not being within, I could not formerly obtain. In the hall stands that triumphant Colosse of one of the family, upon three figures, a modern, but rare piece. About it stood some Gladiators; and, at the entrance into one of the first chambers, are two cumbent figures of AGE and YOUTH, brought hither from St. Peter's to make room for the Longinus under the cupola. Here was the statue of a ram running at a man on horseback, a most incomparable expression of Fury, cut in stone; and a table of *pietra-commessa*, very curious. The next chamber was all painted *a fresco*, by a rare hand, as was the carving in wood of the ceiling, which, as I remember, was in cedar, as the Italian mode is, and not poor plaster, as ours are; some of them most richly gilt. In a third room, stood the famous Venus, and the child Hercules strangling a serpent, of Corinthian brass,

antique, on a very curious basso-relievo; the sacrifice to Priapus; the Egyptian Isis, in the hard, black ophite stone, taken out of the Pantheon, greatly celebrated by the antiquaries: likewise two tables of brass, containing divers old Roman laws. At another side of this chamber, was the statue of a wounded Amazon falling from her horse, worthy the name of the excellent sculptor, whoever the artist was. Near this was a bass-relievo of a Bacchanalia, with a most curious Silenus. The fourth room was totally environed with statues; especially observable was that so renowned piece of a Venus looking backward over her shoulder, and divers other naked figures, by the old Greek masters. Over the doors are two Venuses, one of them looking on her face in a glass, by M. Angelo; the other is painted by Caracci. I never saw finer faces, especially that under the mask, whose beauty and art are not to be described by words. The next chamber is also full of statues; most of them the heads of Philosophers, very antique. One of the Cæsars and another of Hannibal cost 1,200 crowns. Now I had a second view of that never-to-be-sufficiently-admired gallery, painted in deep relievo, the work of ten years' study, for a trifling reward. In the wardrobe above they showed us fine wrought plate, porcelain, mazers of beaten and solid gold, set with diamonds, rubies, and emeralds; a treasure, especially the workmanship considered, of inestimable value. This is all the Duke of Parma's. Nothing seemed to be more curious and rare in its kind than the complete service of the purest crystal, for the altar of the chapel, the very bell, cover of a book, sprinkler, etc., were all of the rock, incomparably sculptured, with the holy story in deep Levati; thus was also wrought the crucifix, chalice, vases, flower-pots, the largest and purest crystal that my eyes ever beheld. Truly I looked on this as one of the greatest curiosities I had seen in Rome. In another part were presses furnished with antique arms, German clocks, perpetual motions, watches, and curiosities of Indian works. A very ancient picture of Pope Eugenius; a St. Bernard; and a head of marble found long since, supposed to be a true portrait of our Blessed Savior's face.

Hence, we went to see Dr. Gibbs, a famous poet and countryman of ours, who had some intendency in an hospital built on the Via Triumphalis, called Christ's

Hospital, which he showed us. The Infirmary, where the sick lay, was paved with various colored marbles, and the walls hung with noble pieces; the beds are very fair; in the middle is a stately cupola, under which is an altar decked with divers marble statues, all in sight of the sick, who may both see and hear mass, as they lie in their beds. The organs are very fine, and frequently played on to recreate the people in pain. To this joins an apartment destined for the orphans; and there is a school: the children wear blue, like ours in London, at an hospital of the same appellation. Here are forty nurses, who give suck to such children as are accidentally found exposed and abandoned. In another quarter, are children of a bigger growth, 450 in number, who are taught letters. In another, 500 girls, under the tuition of divers religious matrons, in a monastery, as it were, by itself. I was assured there were at least 2,000 more maintained in other places. I think one apartment had in it near 1,000 beds; these are in a very long room, having an inner passage for those who attend, with as much care, sweetness, and conveniency as can be imagined, the Italians being generally very neat. Under the portico, the sick may walk out and take the air. Opposite to this, are other chambers for such as are sick of maladies of a more rare and difficult cure, and they have rooms apart. At the end of the long corridor is an apothecary's shop, fair and very well stored; near which are chambers for persons of better quality, who are yet necessitous. Whatever the poor bring is, at their coming in, delivered to a treasurer, who makes an inventory, and is accountable to them, or their representatives if they die.

To this building joins the house of the commendator, who, with his officers attending the sick, make up ninety persons; besides a convent and an ample church for the friars and priests who daily attend. The church is extremely neat, and the *sacristia* is very rich. Indeed it is altogether one of the most pious and worthy foundations I ever saw. Nor is the benefit small which divers young physicians and chirurgeons reap by the experience they learn here among the sick, to whom those students have free access. Hence, we ascended a very steep hill, near the Port St. Pancratio, to that stately fountain called

Acqua Paula, being the aqueduct which Augustus had brought to Rome, now re-edified by Paulus V.; a rare piece of architecture, and which serves the city after a journey of thirty-five miles, here pouring itself into divers ample lavers, out of the mouths of swans and dragons, the arms of this Pope. Situate on a very high mount, it makes a most glorious show to the city, especially when the sun darts on the water as it gusheth out. The inscriptions on it are:

*"Paulus V. Romanus Pontifex Opt. Max. Aquæductus ab Augusto Cæsare extructos, ævi longinquâ vetustate collapsos, in ampliorem formam restituit anno salutis M.D.CIX. Pont. V."*

And toward the fields:

*"Paulus V. Rom. Pontifex Optimus Maximus, priori ductu longissimi temporis injuriâ penè diruto, sublimiorem."*

\* \* \* \* \*

[One or more leaves are here wanting in Evelyn's MS., descriptive of other parts of Rome, and of his leaving the city.]

Thence to Velletri, a town heretofore of the Volsci, where is a public and fair statue of P. Urban VIII., in brass, and a stately fountain in the street. Here we lay and drank excellent wine.

28th January, 1645. We dined at Sermonetta, descending all this morning down a stony mountain, unpleasant, yet full of olive trees; and, anon, pass a tower built on a rock, kept by a small guard against the banditti who infest those parts, daily robbing and killing passengers, as my Lord Banbury and his company found to their cost a little before. To this guard we gave some money, and so were suffered to pass, which was still on the Appian to the *Tres Tabernæ* (whither the brethren came from Rome to meet St. Paul, Acts, c. 28); the ruins whereof are yet very fair, resembling the remainder of some considerable edifice, as may be judged by the vast stones and fairness of the arched work. The country environing this passage is hilly, but rich; on the right hand stretches an ample plain, being the *Pomptini Campi*. We reposed this night at Piperno, in the posthouse without the town; and here I was extremely troubled with a sore hand, which now began to fester, from a mischance at Rome, upon my base, unlucky, stiff-necked, trotting, car-

rion mule; which are the most wretched beasts in the world. In this town was the poet Virgil's Camilla born.

The day following, we were fain to hire a strong convey of about thirty firelocks, to guard us through the cork woods (much infested with the banditti) as far as Fossa Nuova, where was the Forum Appii, and now stands a church with a great monastery, the place where Thomas Aquinas both studied and lies buried. Here we all alighted, and were most courteously received by the Monks, who showed us many relics of their learned Saint and at the high altar the print forsooth of the mule's hoof which he caused to kneel before the Host. The church is old, built after the Gothic manner; but the place is very agreeably melancholy. After this, pursuing the same noble [Appian] way (which we had before left a little), we found it to stretch from Capua to Rome itself, and afterward as far as Brundisium. It was built by that famous Consul, twenty-five feet broad, every twelve feet something ascending for the ease and firmer footing of horse and man; both the sides are also a little raised for those who travel on foot. The whole is paved with a kind of beach-stone, and, as I said, ever and anon adorned with some old ruin, sepulchre, or broken statue. In one of these monuments Pancirollus tells us that, in the time of Paul III., there was found the body of a young lady, swimming in a kind of bath of precious oil, or liquor, fresh and entire as if she had been living, neither her face discolored, nor her hair disordered; at her feet burnt a lamp, which suddenly expired at the opening of the vault; having flamed, as was computed, now 1,500 years, by the conjecture that she was Tulliola, the daughter of Cicero, whose body was thus found, and as the inscription testified. We dined this day at Terracina, heretofore the famous Anxur, which stands upon a very eminent promontory, the Circean by name. While meat was preparing, I went up into the town, and viewed the fair remainders of Jupiter's Temple, now converted into a church, adorned with most stately columns; its architecture has been excellent, as may be deduced from the goodly cornices, moldings, and huge white marbles of which it is built. Before the portico stands a pillar thus inscribed:

*Inclyta Gothorum Regis monumenta vetusta  
Anxuri hoc Oculos exposuere loco;»*

for, it seems, Theodoric drained their marches.

On another more ancient:

*«Imp. Cæsar Divi Nervæ Filius Nerva Trojanus Aug. Germanicus Dacicus. Pontif. Max. Trib. Pop. xviii. Imp. vi. Cos. v. p. p. xviii. Silices sud pecuniâ stravit.»*

Meaning doubtless, some part of the Via Appia. Then:

*«Tit. Upio. Aug. optato Pontano Procuratori et Præfect. Classis. — Ti. Julius. T. Fab. optatus 11. vir.»*

Here is likewise a Columna Milliaria, with something engraven on it, but I could not stay to consider it. Coming down again, I went toward the sea-side to contemplate that stupendous strange rock and promontory, cleft by hand, I suppose, for the better passage. Within this is the Circean Cave, which I went into a good way; it makes a dreadful noise, by reason of the roaring and impetuous waves continually assaulting the beach, and that in an unusual manner. At the top, at an excessive height, stands an old and very great castle. We arrived this night at Fondi, a most dangerous passage for robbing; and so we passed by Galba's villa, and anon entered the kingdom of Naples, where, at the gate, this epigraph saluted us: *«Hospes, hic sunt fines Regni Neapolitani; si amicus advenis, pacatè omnia invenies, et malis moribus pulsus, bonas leges.»* The Via Appia is here a noble prospect; having before considered how it was carried through vast mountains of rocks for many miles, by most stupendous labor: here it is infinitely pleasant, beset with sepulchres and antiquities, full of sweet shrubs in the environing hedges. At Fondi, we had oranges and citrons for nothing, the trees growing in every corner, charged with fruit.

29th January, 1645. We descried Mount Cæcubus, famous for the generous wine it heretofore produced, and so rode onward the Appian Way, beset with myrtles, lentiscuses, bays, pomegranates, and whole groves of orange trees, and most delicious shrubs, till we came to Formiana [Formiæ], where they showed us Cicero's tomb, standing in an olive grove, now a rude heap of stones without form or beauty; for here that incomparable ora-

tor was murdered. I shall never forget how exceedingly I was delighted with the sweetness of this passage, the sepulchre mixed among all sorts of verdure; besides being now come within sight of the noble city, Cajeta [Gaieta], which gives a surprising prospect along the Tyrrhene Sea, in manner of a theater: and here we beheld that strangely cleft rock, a frightful spectacle, which they say happened upon the passion of our Blessed Savior; but the haste of our procaccio did not suffer us to dwell so long on these objects and the many antiquities of this town as we desired.

At Formi, we saw Cicero's grot; dining at Mola, and passing Sinuessa, Garigliano (once the city Mintern), and beheld the ruins of that vast amphitheater and aqueduct yet standing; the river Liris, which bounded the old Latium, Falernus, or Mons Massacus, celebrated for its wine, now named Garo; and this night we lodged at a little village called St. Agatha, in the Falernian Fields, near to Aurunca and Sessa.

The next day, having passed [the river] Volturnus, we come by the Torre di Francolisi, where Hannibal, in danger from Fabius Maximus, escaped by debauching his enemies; and so at last we entered the most pleasant plains of Campania, now called Terra di Lavoro; in very truth, I think, the most fertile spot that ever the sun shone upon. Here we saw the slender ruins of the once mighty Capua, contending at once both with Rome and Carthage, for splendor and empire, now nothing but a heap of rubbish, except showing some vestige of its former magnificence in pieces of temples, arches, theatres, columns, ports, vaults, colosses, etc., confounded together by the barbarous Goths and Longobards; there is, however, a new city, nearer to the road by two miles, fairly raised out of these heaps. The passage from this town to Naples (which is about ten or twelve English post miles) is as straight as a line, of great breadth, fuller of travelers than I remember any of our greatest and most frequented roads near London; but, what is extremely pleasing, is the great fertility of the fields, planted with fruit trees, whose boles are serpented with excellent vines, and they so exuberant, that it is commonly reported one vine will load five mules with its grapes. What adds much to the pleasure of the sight

is, that the vines, climbing to the summit of the trees, reach in festoons and fruitages from one tree to another, planted at exact distances, forming a more delightful picture than painting can describe. Here grow rice, canes for sugar, olives, pomegranates, mulberries, citrons, oranges, figs, and other sorts of rare fruits. About the middle of the way is the town Aversa, whither came three or four coaches to meet our lady travelers, of whom we now took leave, having been very merry by the way with them and the capitano, their gallant.

31st January, 1645. About noon we entered the city of Naples, alighting at the Three Kings, where we found the most plentiful fare all the time we were in Naples. Provisions are wonderfully cheap; we seldom sat down to fewer than eighteen or twenty dishes of exquisite meat and fruits.

The morrow after our arrival, in the afternoon, we hired a coach to carry us about the town. First, we went to the castle of St. Elmo, built on a very high rock, whence we had an entire prospect of the whole city, which lies in shape of a theatre upon the sea-brink, with all the circumjacent islands, as far as Capreae, famous for the debauched recesses of Tiberius. This fort is the bridle of the whole city, and was well stored and garrisoned with native Spaniards. The strangeness of the precipice and rareness of the prospect of so many magnificent and stately palaces, churches, and monasteries, with the Arsenal, the Mole, and Mount Vesuvius in the distance, all in full command of the eye, make it one of the richest landscapes in the world.

Hence, we descended to another strong castle, called Il Castello Nuovo, which protects the shore; but they would by no entreaty permit us to go in; the outward defense seems to consist but in four towers, very high, and an exceeding deep graff, with thick walls. Opposite to this is the tower of St. Vincent, which is also very strong.

Then we went to the very noble palace of the Viceroy, partly old, and part of a newer work; but we did not stay long here. Toward the evening, we took the air upon the Mole, a street on the rampart, or bank, raised in the sea for security of their galleys in port, built as that of Genoa. Here I observed a rich fountain

in the middle of the piazza, and adorned with divers rare statues of copper, representing the Sirens, or Deities of the Parthenope, spouting large streams of water into an ample shell, all of cast metal, and of great cost. This stands at the entrance of the Mole, where we met many of the nobility both on horseback and in their coaches to take the fresco from the sea, as the manner is, it being in the most advantageous quarter for good air, delight and prospect. Here we saw divers goodly horses who handsomely become their riders, the Neapolitan gentlemen. This Mole is about 500 paces in length, and paved with a square hewn stone. From the Mole, we ascend to a church of great antiquity, formerly sacred to Castor and Pollux, as the Greek letters carved on the architrave and the busts of their two statues testify. It is now converted into a stately oratory by the Theatines.

The Cathedral is a most magnificent pile, and except St. Peter's in Rome, Naples exceeds all cities for stately churches and monasteries. We were told that this day the blood of St. Januarius and his head should be exposed, and so we found it, but obtained not to see the miracle of the boiling of this blood. The next we went to see was St. Peter's, richly adorned, the chapel especially, where that Apostle said mass, as is testified on the wall.

After dinner we went to St. Dominic, where they showed us the crucifix that is reported to have said these words to St. Thomas, "*Benè de me scripsisti, Thoma.*" Hence, to the Padri Olivetani, famous for the monument of the learned Alexander-ab-Alexandro.

We proceeded, the next day, to visit the church of Santa Maria Maggiore, where we spent much time in surveying the chapel of Joh. Jov. Pontanus, and in it the several and excellent sentences and epitaphs on himself, wife, children, and friends, full of rare wit, and worthy of recording, as we find them in several writers. In the same chapel is shown an arm of Titus Livius, with this epigraph. "*Titi Livij brachium quod Anton. Panormita a Patavinis impetravit, Jo. Jovianus Pontanus multos post annos hœc in loco ponendum curavit.*"

Climbing a steep hill, we came to the monastery and Church of the Carthusians, from whence is a most goodly prospect toward the sea and city, the one full of galleys

and ships, the other of stately palaces, churches, monasteries, castles, gardens, delicious fields and meadows, Mount Vesuvius smoking, the promontory of Minerva and Misenum, Capreæ, Prochyta, Ischia, Pausilipum, Puteoli, and the rest, doubtless one of the most divertissant and considerable vistas in the world. The church is most elegantly built; the very pavements of the common cloister being all laid with variously polished marbles, richly figured. They showed us a massy cross of silver, much celebrated for the workmanship and carving, and said to have been fourteen years in perfecting. The choir also is of rare art; but above all to be admired, is the yet unfinished church of the Jesuits, certainly, if accomplished, not to be equalled in Europe. Hence, we passed by the Palazzo Caraffi, full of ancient and very noble statues; also the palace of the Orsini. The next day, we did little but visit some friends, English merchants, resident for their negotiation; only this morning at the Viceroy's Cavalerizza I saw the noblest horses that I had ever beheld, one of his sons riding the menage with that address and dexterity as I had never seen anything approach it.

4th February, 1645. We were invited to the collection of exotic rarities in the Museum of Ferdinando Imperati, a Neapolitan nobleman, and one of the most observable palaces in the city, the repository of incomparable rarities. Among the natural herbals most remarkable was the *Byssus marina* and *Pinna marina*; the male and female chameleon; an *Onocrotatus*; an extraordinary great crocodile; some of the *Orcades Anates*, held here for a great rarity; likewise a salamander; the male and female *Manucordiata*, the male having a hollow in the back, in which it is reported the female both lays and hatches her eggs; the *mandragoras*, of both sexes; *Papyrus*, made of several reeds, and some of silk; tables of the rinds of trees, written with Japonic characters; another of the branches of palm; many Indian fruits; a crystal that had a quantity of uncongealed water within its cavity; a petrified fisher's net; divers sorts of tarantulas, being a monstrous spider, with lark-like claws, and somewhat bigger.

5th February, 1645. This day we beheld the Vice-king's procession, which was very splendid for the relics,

banners, and music that accompanied the Blessed Sacrament. The ceremony took up most of the morning.

6th February, 1645. We went by coach to take the air, and see the diversions, or rather madness of the Carnival; the courtesans (who swarm in this city to the number, as we are told, of 30,000, registered and paying a tax to the State) flinging eggs of sweet water into our coach, as we passed by the houses and windows. Indeed, the town is so pestered with these cattle, that there needs no small mortification to preserve from their enchantment, while they display all their natural and artificial beauty, play, sing, feign compliment, and by a thousand studied devices seek to inveigle foolish young men.

7th February, 1645. The next day, being Saturday, we went four miles out of town on mules, to see that famous volcano, Mount Vesuvius. Here we pass a fair fountain, called Labulla, which continually boils, supposed to proceed from Vesuvius, and thence over a river and bridge, where on a large upright stone, is engraven a notable inscription relative to the memorable eruption in 1630.

Approaching the hill, as we were able with our mules, we alighted, crawling up the rest of the proclivity with great difficulty, now with our feet, now with our hands, not without many untoward slips which did much bruise us on the various colored cinders, with which the whole mountain is covered, some like pitch, others full of perfect brimstone, others metallic, interspersed with innumerable pumices (of all which I made a collection), we at the last gained the summit of an extensive altitude. Turning our faces toward Naples, it presents one of the goodliest prospects in the world; all the *Baiæ*, *Cuma*, *Elysian Fields*, *Capreæ*, *Ischia*, *Prochyta*, *Misenus*, *Puteoli*, that goodly city, with a great portion of the *Tyrrhene Sea*, offering themselves to your view at once, and at so agreeable a distance, as nothing can be more delightful. The mountain consists of a double top, the one pointed very sharp, and commonly appearing above any clouds, the other blunt. Here, as we approached, we met many large gaping clefts and chasms, out of which issued such sulphurous blasts and smoke, that we dared not stand long near them. Having gained the very summit, I laid

myself down to look over into that most frightful and terrible vorago, a stupendous pit of near three miles in circuit, and half a mile in depth, by a perpendicular hollow cliff (like that from the highest part of Dover Castle), with now and then a craggy prominence jutting out. The area at the bottom is plane, like an even floor, which seems to be made by the wind circling the ashes by its eddy blasts. In the middle and centre is a hill, shaped like a great brown loaf, appearing to consist of sulphurous matter, continually vomiting a foggy exhalation, and ejecting huge stones with an impetuous noise and roaring, like the report of many muskets discharging. This horrid barathrum engaged our attention for some hours, both for the strangeness of the spectacle, and the mention which the old histories make of it, as one of the most stupendous curiosities in nature, and which made the learned and inquisitive Pliny adventure his life to detect the causes, and to lose it in too desperate an approach. It is likewise famous for the stratagem of the rebel, Spartacus, who did so much mischief to the State lurking among and protected by, these horrid caverns, when it was more accessible and less dangerous than it is now; but especially notorious it is for the last conflagration, when, in *anno* 1630, it burst out beyond what it had ever done in the memory of history; throwing out huge stones and fiery pumices in such quantity, as not only environed the whole mountain, but totally buried and overwhelmed divers towns and their inhabitants, scattering the ashes more than a hundred miles, and utterly devastating all those vineyards, where formerly grew the most incomparable Greco; when, bursting through the bowels of the earth, it absorbed the very sea, and, with its whirling waters, drew in divers galleys and other vessels to their destruction, as is faithfully recorded. We descended with more ease than we climbed up, through a deep valley of pure ashes, which at the late eruption was a flowing river of melted and burning brimstone, and so came to our mules at the foot of the mountain.

On Sunday, we with our guide visited the so much celebrated Baia, and natural rarities of the places adjacent. Here we entered the mountain Pausilypus, at the left hand of which they showed us Virgil's sepulchre erected

on a steep rock, in form of a small rotunda or cupolated column, but almost overgrown with bushes and wild bay trees. At the entrance is this inscription:

*Stanisi Cencovius.*

1589.

*Qui cineres? Tumuli hęc vestigia, conditur olim*

*Ille hęc qui cecinit Pascua, Rura Duces.*

*Can Re MDLIII.\**

After we were advanced into this noble and altogether wonderful crypt, consisting of a passage spacious enough for two coaches to go abreast, cut through a rocky mountain near three quarters of a mile (by the ancient Cimmerii as reported, but as others say by L. Cocceius, who employed a hundred thousand men on it), we came to the midway, where there is a well bored through the diameter of this vast mountain, which admits the light into a pretty chapel, hewn out of the natural rock, wherein hang divers lamps, perpetually burning. The way is paved under foot; but it does not hinder the dust, which rises so excessively in this much-frequented passage, that we were forced at midday to use a torch. At length, we were delivered from the bowels of the earth into one of the most delicious plains in the world: the oranges, lemons, pomegranates, and other fruits, blushing yet on the perpetually green trees; for the summer is here eternal, caused by the natural and adventitious heat of the earth, warmed through the subterranean fires, as was shown us by our guide, who alighted, and, cutting up a turf with his knife, and delivering it to me, it was so hot, I was hardly able to hold it in my hands. This mountain is exceedingly fruitful in vines, and exotics grow readily.

We now came to a lake of about two miles in circumference, environed with hills; the water of it is fresh and sweet on the surface, but salt at bottom; some mineral salt conjectured to be the cause, and it is reported of that

\*Such is the inscription, as copied by Evelyn; but as its sense is not very clear, and the Diary contains instances of incorrectness in transcribing, it may be desirable to subjoin the distich said (by Keyser in his "Travels," ii. 433) to be the only one in the whole mausoleum:

*"Quę cineris tumulo hęc vestigia? conditur olim  
Ille hoc qui cecinit pascua, rura, duces."*

profunditude in the middle that it is bottomless. The people call it Lago d'Agnano, from the multitude of serpents which, involved together about the spring, fall down from the clifly hills into it. It has no fish, nor will any live in it. We tried the old experiment on a dog in the Grotto del Cane, or Charon's Cave; it is not above three or four paces deep, and about the height of a man, nor very broad. Whatever having life enters it, presently expires. Of this we made trial with two dogs, one of which we bound to a short pole to guide him the more directly into the further part of the den, where he was no sooner entered, but — without the least noise, or so much as a struggle, except that he panted for breath, lolling out his tongue, his eyes being fixed; — we drew him out dead to all appearance; but immediately plunging him into the adjoining lake, within less than half an hour he recovered, and swimming to shore, ran away from us. We tried the same on another dog, without the application of the water, and left him quite dead. The experiment has been made on men, as on that poor creature whom Peter of Toledo caused to go in; likewise on some Turkish slaves; two soldiers, and other foolhardy persons, who all perished, and could never be recovered by the water of the lake, as are dogs; for which many learned reasons have been offered, as Simon Majolus in his book of the Canicular-days has mentioned, colloq. 15. And certainly the most likely is, the effect of those hot and dry vapors which ascend out of the earth, and are condensed by the ambient cold, as appears by their converting into crystalline drops on the top, while at the bottom it is so excessively hot, that a torch being extinguished near it, and lifted a little distance, was suddenly re-lighted.

Near to this cave are the natural stoves of St. Germain, of the nature of sudatories, in certain chambers partitioned with stone for the sick to sweat in, the vapors here being exceedingly hot, and of admirable success in the gout, and other cold distempers of the nerves. Hence, we climbed up a hill, the very highway in several places even smoking with heat like a furnace. The mountains were by the Greeks called Leucogæi, and the fields Phlegræn. Hercules here vanquished the Giants, assisted with lightning. We now came to the Court of Vulcan, consisting of a valley near a quarter of a mile in breadth,

the margin environed with steep cliffs, out of whose sides and foot break forth fire and smoke in abundance, making a noise like a tempest of water, and sometimes discharging in loud reports, like so many guns. The heat of this place is wonderful, the earth itself being almost unsufferable, and which the subterranean fires have made so hollow, by having wasted the matter for so many years, that it sounds like a drum to those who walk upon it; and the water thus struggling with those fires bubbles and spouts aloft into the air. The mouths of these spiracles are bestrewed with variously colored cinders, which rise with the vapor, as do many colored stones, according to the quality of the combustible matter, insomuch as it is no little adventure to approach them. They are, however, daily frequented both by sick and well; the former receiving the fumes, have been recovered of diseases esteemed incurable. Here we found a great deal of sulphur made, which they refine in certain houses near the place, casting it into canes, to a very great value. Near this we were showed a hill of alum, where is one of the best mineries, yielding a considerable revenue. Some flowers of brass are found here; but I could not but smile at those who persuade themselves that here are the gates of purgatory (for which it may be they have crected, very near it, a convent, and named it St. Januarius), reporting to have often heard screeches and horrible lamentations proceeding from these caverns and volcanoes; with other legends of birds that are never seen, save on Sundays, which cast themselves into the lake at night, appearing no more all the week after.

We now approached the ruins of a very stately temple, or theater, of 172 feet in length, and about 80 in breadth, thrown down by an earthquake, not long since; it was consecrated to Vulcan, and under the ground are many strange meanders; from which it is named the LABYRINTH; this place is so haunted with bats, that their perpetual fluttering endangered the putting out our links.

Hence, we passed again those boiling and smoking hills, till we came to Pozzolo, formerly the famous Puteoli, the landing-place of St. Paul, when he came into Italy, after the tempest described in the Acts of the Apostles. Here we made a good dinner, and bought divers medals, antiquities, and other curiosities, of the country people, who

daily find such things among the very old ruins of those places. This town was formerly a Greek colony, built by the Samians, a seasonable commodious port, and full of observable antiquities. We saw the ruins of Neptune's Temple, to whom this place was sacred, and near it the stately palace and gardens of Peter de Toledo, formerly mentioned. Afterward, we visited that admirably built Temple of Augustus, seeming to have been hewn out of an entire rock, though indeed consisting of several square stones. The inscription remains thus: "*L. Calphurnius L. F. Templum Augusto cum ornamentis D. D.*;" and under it, "*L. Coccejus L. C. Postumi L. Auctus Architectus.*" It is now converted into a church, in which they showed us huge bones, which they affirm to have been of some giant.

We went to see the ruins of the old haven, so compact with that bituminous sand in which the materials are laid, as the like is hardly to be found, though all this has not been sufficient to protect it from the fatal concussions of several earthquakes (frequent here) which have almost demolished it, thirteen vast piles of marble only remaining; a stupendous work in the bosom of Neptune! To this joins the bridge of Caligula, by which (having now embarked ourselves) we sailed to the pleasant Baia, almost four miles in length, all which way that proud Emperor would pass in triumph. Here we rowed along toward a villa of the orator Cicero's, where we were shown the ruins of his Academy; and, at the foot of a rock, his Baths, the waters reciprocating their tides with the neighboring sea. Hard at hand, rises Mount Gaurus, being, as I conceived, nothing save a heap of pumices, which here float in abundance on the sea, exhausted of all inflammable matter by the fire, which renders them light and porous, so as the beds of nitre, which lie deep under them, having taken fire, do easily eject them. They dig much for fancied treasure said to be concealed about this place. From hence, we coasted near the ruins of Portus Julius, where we might see divers stately palaces that had been swallowed up by the sea after earthquakes. Coming to shore, we pass by the Lucrine Lake, so famous heretofore for its delicious oysters, now producing few or none, being divided from the sea by a bank of incredible labor, the supposed work of Hercules; it is now half choked up with rubbish, and by part of the new mountain, which

rose partly out of it, and partly out of the sea, and that in the space of one night and a day, to a very great altitude, on the 29th September, 1538, after many terrible earthquakes, which ruined divers places thereabout, when at midnight the sea retiring near 200 paces, and yawning on the sudden, it continued to vomit forth flames and fiery stones in such quantity, as produced this whole mountain by their fall, making the inhabitants of Pozzolo to leave their habitations, supposing the end of the world had been come.

From the left part of this, we walked to the Lake Avernus of a round form, and totally environed with mountains. This lake was feigned by the poet for the gates of hell, by which Æneas made his descent, and where he sacrificed to Pluto and the Manes. The waters are of a remarkably black color; but I tasted of them without danger; hence, they feign that the river Styx has its source. At one side, stand the handsome ruins of a Temple dedicated to Apollo, or rather Pluto, but it is controverted. Opposite to this, having new lighted our torches, we enter a vast cave, in which having gone about two hundred paces, we pass a narrow entry which leads us into a room of about ten paces long, proportionably broad and high; the side walls and roof retain still the golden mosaic, though now exceedingly decayed by time. Here is a short cell or rather niche, cut out of the solid rock, somewhat resembling a couch, in which they report that the Sibylla lay, and uttered her Oracles; but it is supposed by most to have been a bath only. This subterranean grot leads quite through to Cuma, but is in some places obstructed by the earth which has sunk in, so as we were constrained back again, and to creep on our bellies, before we came to the light. It is reported Nero had once resolved to cut a channel for two great galleys that should have extended to Ostia, 150 miles distant. The people now call it Licola.

From hence, we ascended to that most ancient city of Italy, the renowned Cuma, built by the Grecians. It stands on a very eminent promontory, but is now a heap of ruins. A little below, stands the Arco Felice, heretofore part of Apollo's Temple, with the foundations of divers goodly buildings; among whose heaps are frequently found statues and other antiquities, by such as

dig for them. Near this is the Lake Acherutia, and Acheron. Returning to the shore, we came to the Bagni de Tritoli and Diana, which are only long narrow passages cut through the main rock, where the vapors ascend so hot, that entering with the body erect you will even faint with excessive perspiration; but, stooping lower, as sudden a cold surprises. These sudatorics are much in request for many infirmities. Now we entered the haven of the Bahiæ, where once stood that famous town, so-called from the companion of Ulysses here buried; not without great reason celebrated for one of the most delicious places that the sun shines on, according to that of Horace:

*"Nullus in Orbe locus Baiis præluceat amantis."*

Though, as to the stately fabrics, there now remain little save the ruins, whereof the most entire is that of Diana's Temple, and another of Venus. Here were those famous poles of lampreys that would come to hand when called by name, as Martial tells us. On the summit of the rock stands a strong castle garrisoned to protect the shore from Turkish pirates. It was once the retiring place of Julius Cæsar.

Passing by the shore again, we entered Bauli, observable from the monstrous murder of Nero committed on his mother Agrippina. Her sepulchre was yet shown us in the rock, which we entered, being covered with sundry heads and figures of beasts. We saw there the roots of a tree turned into stone, and are continually dropping.

Thus having viewed the foundations of the old Cimmerica, the palaces of Marius, Pompey, Nero, Hortensius, and other villas and antiquities, we proceeded toward the promontory of Misenus, renowned for the sepulchre of Æneas's Trumpeter. It was once a great city, now hardly a ruin, said to have been built from this place to the promontory of Minerva, fifty miles distant, now discontinued and demolished by the frequent earthquakes. Here was the villa of Caius Marius, where Tiberius Cæsar died; and here runs the Aqueduct, thought to be dug by Nero, a stupendous passage, heretofore nobly arched with marble, as the ruins testify. Hence, we walked to those receptacles of water called *Piscina Mirabilis*, being a

vault of 500 feet long, and twenty-two in breadth, the roof propped up with four ranks of square pillars, twelve in a row; the walls are brick, plastered over with such a composition as for strength and politure resembles white marble. 'Tis conceived to have been built by Nero, as a conservatory for fresh water; as were also the Centi Camerelli, into which we were next led. All these crypta being now almost sunk into the earth, show yet their former amplitude and magnificence.

Returning toward the Baia, we again pass the Elysian Fields, so celebrated by the poets, nor unworthily, for their situation and verdure, being full of myrtles and sweet shrubs, and having a most delightful prospect toward the Tyrrhene Sea. Upon the verge of these remain the ruins of the Mercato di Saboto, formerly a Circus; over the arches stand divers urns, full of Roman ashes.

Having well satisfied our curiosity among these antiquities, we retired to our felucca, which rowed us back again toward Pozzolo, at the very place of St. Paul's landing. Keeping along the shore, they showed us a place where the sea water and sands did exceedingly boil. Thence, to the island Nesis, once the fabulous Nymph; and thus we leave the Baia, so renowned for the sweet retirements of the most opulent and voluptuous Romans. They certainly were places of uncommon amenity, as their yet tempting site, and other circumstances of natural curiosities, easily invite me to believe, since there is not in the world so many stupendous rarities to be met with, as in the circle of a few miles which environ these blissful abodes.

8th February, 1645. Returned to Naples, we went to see the Arsenal, well furnished with galleys and other vessels. The city is crowded with inhabitants, gentlemen and merchants. The government is held of the Pope by an annual tribute of 40,000 ducats and a white jennet; but the Spaniard trusts more to the power of those his natural subjects there; Apulia and Calabria yielding him near four millions of crowns yearly to maintain it. The country is divided into thirteen Provinces, twenty Archbishops, and one hundred and seven Bishops; the estates of the nobility, in default of the male line, reverting to the King. Besides the Vice-Roy, there is

among the Chief Magistrates a High Constable, Admiral, Chief Justice, Great Chamberlain, and Chancellor, with a Secretary; these being prodigiously avaricious, do wonderfully enrich themselves out of the miserable people's labor, silks, manna, sugar, oil, wine, rice, sulphur, and alum; for with all these riches is this delicious country blest. The manna falls at certain seasons on the adjoining hills in form of a thick dew. The very winter here is a summer, ever fruitful, so that in the middle of February we had melons, cherries, apricots, and many other sorts of fruit.

The building of the city is for the size the most magnificent of any in Europe, the streets exceeding large, well paved, having many vaults and conveyances under them for the sulliage; which renders them very sweet and clean, even in the midst of winter. To it belongeth more than 3,000 churches and monasteries, and these the best built and adorned of any in Italy. They greatly affect the Spanish gravity in their habit; delight in good horses; the streets are full of gallants on horseback, in coaches and sedans, from hence brought first into England by Sir Sanders Duncomb. The women are generally well featured, but excessively libidinous. The country people so jovial and addicted to music, that the very husbandmen almost universally play on the guitar, singing and composing songs in praise of their sweethearts, and will commonly go to the field with their fiddle; they are merry, witty, and genial; all which I much attribute to the excellent quality of the air. They have a deadly hatred to the French, so that some of our company were flouted at for wearing red cloaks, as the mode then was.

This I made the *non ultra* of my travels, sufficiently sated with rolling up and down, and resolving within myself to be no longer an *individuum vagum*, if ever I got home again; since, from the report of divers experienced and curious persons, I had been assured there was little more to be seen in the rest of the civil world, after Italy, France, Flanders, and the Low Countries, but plain and prodigious barbarism.

Thus, about the 7th of February,\* we set out on our return to Rome by the same way we came, not daring

\* Evelyn's dates in this portion of his Diary appear to require occasionally that qualification of "about."

to adventure by sea, as some of our company were inclined to do, for fear of Turkish pirates hovering on that coast; nor made we any stay save at Albano, to view the celebrated place and sepulchre of the famous duelists who decided the ancient quarrel between their imperious neighbors with the loss of their lives. These brothers, the Horatii and Curiatii, lie buried near the highway, under two ancient pyramids of stone, now somewhat decayed and overgrown with rubbish. We took the opportunity of tasting the wine here, which is famous.

Being arrived at Rome on the 13th of February, we were again invited to Signor Angeloni's study, where with greater leisure we surveyed the rarities, as his cabinet and medals especially, esteemed one of the best collections of them in Europe. He also showed us two antique lamps, one of them dedicated to Pallas, the other *Laribus Sacru'*, as appeared by their inscriptions; some old Roman rings and keys; the Egyptian Isis, cast in iron; sundry rare basso-relievos; good pieces of paintings, principally of Christ of Correggio, with this painter's own face admirably done by himself; divers of both the Bassanos; a great number of pieces by Titian, particularly the Triumphs; an infinity of natural rarities, dried animals, Indian habits and weapons, shells, etc.; divers very antique statues of brass: some lamps of so fine an earth that they resembled cornelians, for transparency and color; hinges of Corinthian brass, and one great nail of the same metal found in the ruins of Nero's golden house.

In the afternoon, we ferried over to Transtevere, to the palace of Gichi, to review the works of Raphael: and, returning by St. Angelo, we saw the castle as far as was permitted, and on the other side considered those admirable pilasters supposed to be of the foundation of the Pons Sublicius, over which Horatius Cocles passed; here anchor three or four water mills, invented by Belizarius: and thence had another sight of the Farnesi's gardens, and of the terrace where is that admirable painting of Raphael, being a Cupid playing with a Dolphin, wrought *d fresco*, preserved in shutters of wainscot, as well it merits, being certainly one of the most wonderful pieces of work in the world.

14th February, 1645. I went to Santa Cecilia, a church built and endowed by Cardinal Sfrondæti, who has erected

a stately altar near the body of this martyr, not long before found in a vesture of silk girt about, a veil on her head, and the bloody scars of three wounds on the neck; the body is now in a silver chest, with her statue over it, in snow-white marble. Other Saints lie here, decorated with splendid ornaments, lamps, and incensories of great cost. A little farther, they show us the Bath of St. Cecilia, to which joins a Convent of Friars, where is the picture of the Flagellation by Vanni, and the columns of the portico, taken from the Baths of Septimius Severus.

15th February, 1645. Mr. Henshaw and I walked by the Tiber, and visited the Stola Tybertina (now St. Bartholomew's), formerly cut in the shape of a ship, and wharfed with marble, in which a lofty obelisk represented the mast. In the church of St. Bartholomew is the body of the Apostle. Here are the ruins of the Temple of Æsculapius, now converted into a stately hospital and a pretty convent. Opposite to it, is the convent and church of St. John Calabita, where I saw nothing remarkable, save an old broken altar. Here was the Temple of Fortuna Virilis. Hence, we went to a cupola, now a church, formerly dedicated to the sun. Opposite to it, Santa Maria Schola Græca, where formerly that tongue was taught; said to be the second church dedicated in Rome to the Blessed Virgin; bearing also the title of a Cardinalate. Behind this stands the great altar of Hercules, much demolished. Near this, being at the foot of Mount Aventine, are the Pope's salt houses. Ascending the hill, we came to St. Sabina, an ancient fabric, formerly sacred to Diana; there, in a chapel, is an admirable picture, the work of Livia Fontana, set about with columns of alabaster, and in the middle of the church is a stone, cast, as they report, by the Devil at St. Dominic, while he was at mass. Hence, we traveled toward a heap of rubbish, called the Marmorata, on the bank of the Tiber, a magazine of stones; and near which formerly stood a triumphal arch, in honor of Horatius vanquishing the Tuscans. The ruins of the bridge yet appear.

We were now got to Mons Testaceus, a heap of potsherds, almost 200 feet high, thought to have been thrown there and amassed by the subjects of the Commonwealth bringing their tribute in earthen vessels, others (more probably) that it was a quarter of the town where pot-

ters lived; at the summit Rome affords a noble prospect. Before it is a spacious green, called the Hippodrome, where Olympic games were celebrated, and the people mustered, as in our London Artillery-Ground. Going hence, to the old wall of the city, we much admired the pyramid, or tomb, of Caius Cestius, of white marble, one of the most ancient entire monuments, inserted in the wall, with this inscription:

*"C. Cestius L. F. Pob. Epulo (an order of priests) Pr. Tr. pl. VII. Vir. Epulonum."*

And a little beneath:

*"Opus absolutum ex testamento diebus CCCXXX. arbitrato. Ponti P. F. Cla. Melæ Heredis et Potki L."*

At the left hand, is the Port of St. Paul, once Terminus, out of which the three Horatii passed to encounter the Curiatii of Albano. Hence, bending homeward by St. Saba, by Antoninus's baths (which we entered), is the marble sepulchre of Vespasian. The thickness of the walls and the stately ruins show the enormous magnitude of these baths. Passing by a corner of the Circus Maximus, we viewed the place where stood the Septizonium, demolished by Sextus V., for fear of its falling. Going by Mons Cœlius, we beheld the devotions of St. Maria in Naviculâ, so named from a ship carved out in white marble standing on a pedestal before it, supposed to be the vow of one escaped from shipwreck. It has a glorious front to the street. Adjoining to this are the Hortii Mathæi, which only of all the places about the city I omitted visiting, though I was told inferior to no garden in Rome for statues, ancient monuments, aviaries, fountains, groves, and especially a noble obelisk, and maintained in beauty at an expense of 6,000 crowns yearly, which, if not expended to keep up its beauty, forfeits the possession of a greater revenue to another family: so curious are they in their villas and places of pleasure, even to excess.

The next day, we went to the once famous Circus Caracalla, in the midst of which there now lay prostrate one of the most stately and ancient obelisks, full of Egyptian hieroglyphics. It was broken into four pieces, when overthrown by the Barbarians, and would have been purchased and transported into England by the magnificent

Thomas Earl of Arundel, could it have been well removed to the sea. This is since set together and placed on the stupendous artificial rock made by Innocent X., and serving for a fountain in Piazza Navona, the work of Bernini, the Pope's architect. Near this is the sepulchre of Metellus, of massy stone, pretty entire, now called Capo di Bovo. Hence, to a small oratory, named "*Domine, quo vadis*"; where the tradition is, that our Blessed Savior met St. Peter as he fled, and turned him back again.

St. Sebastian's was the next, a mean structure (the *facciata* excepted, but is venerable, especially for the relics and grots, in which lie the ashes of many holy men. Here is kept the pontifical chair sprinkled with the blood of Pope Stephen, to which great devotion is paid; also a well full of martyrs' bones, and the sepulchre of St. Sebastian, with one of the arrows (used in shooting him). These are preserved by the Fulgentine Monks, who have here their monastery, and who led us down into a grotto which they affirmed went divers furlongs under ground; the sides, or walls which we passed were filled with bones and dead bodies, laid (as it were) on shelves, whereof some were shut up with broad stones and now and then a cross, or a palm, cut in them. At the end of some of these subterranean passages, were square rooms with altars in them, said to have been the receptacles of primitive Christians, in the times of persecution, nor seems it improbable.

17th February, 1645. I was invited, after dinner, to the Academy of the Humorists, kept in a spacious hall belonging to Signor Mancini, where the wits of the town meet on certain days to recite poems, and debate on several subjects. The first that speaks is called the Lord, and stands in an eminent place, and then the rest of the Virtuosi recite in order. By these ingenious exercises, besides the learned discourses, is the purity of the Italian tongue daily improved. The room is hung round with devices, or emblems, with mottoes under them. There are several other Academies of this nature, bearing like fantastical titles. In this of the Humorists is the picture of Guarini, the famous author of the Pastor Fido, once of this society. The chief part of the day we spent in hearing the academic exercises.

18th February, 1645. We walked to St. Nicholas in Carcere; it has a fair front, and within are parts of the bodies of St. Mark and Marcellino; on the Tribuna is a painting of Gentileschi, and the altar of Caval; Baglioni, with some other rare paintings. Coming round from hence we passed by the Circus Flaminius, formerly very large, now totally in ruins. In the afternoon, we visited the English Jesuits, with whose Superior, P. Stafford, I was well acquainted; who received us courteously. They call their church and college St. Thomasso de gli Inglesi, and is a seminary. Among other trifles, they show the relics of Becket, their reputed martyr. Of paintings there is one of Durante, and many representing the sufferings of several of their society executed in England, especially F. Campion.

In the Hospital of the Pelerini della S. Trinita, I had seen the feet of many pilgrims washed by Princes, Cardinals, and noble Romans, and served at table, as the ladies and noble women did to other poor creatures in another room. It was told us that no less than 444,000 men had been thus treated in the Jubilee of 1600, and 25,500 women, as appears by the register, which brings store of money.

Returning homeward, I saw the palace of Cardinal Spada, where is a most magnificent hall painted by Daniel de Volterra and Giulio Piacentino, who made the fret in the little Court; but the rare perspectives are of Bolognesi. Near this is the Mont Pieta, instituted as a bank for the poor, who, if the sum be not great, may have money upon pawns. To this joins St. Martino, to which belongs a Schola, or Corporation, that do many works of charity. Hence we came through Campo di Fiori, or herb-market, in the midst of which is a fountain casting out water of a dolphin, in copper; and in this piazza is common execution done.

19th February, 1645. I went, this afternoon, to visit my Lord John Somerset, brother to the Marquis of Worcester, who had his apartment in Palazzo della Cancelleria, belonging to Cardinal Francesco Barberini, as Vice-chancellor of the Church of Rome, and Protector of the English. The building is of the famous architect, Bramante, of incrusted marble, with four ranks of noble lights; the principal entrance is of Fontana's design, and

all marble; the portico within sustained by massy columns; on the second peristyle above, the chambers are rarely painted by Salviati and Vasari; and so ample is this palace, that six princes with their families have been received in it at one time, without incommoding each other.

20th February, 1645. I went, as was my usual custom, and spent an afternoon in Piazza Navona, as well as to see what antiquities I could purchase among the people who hold market there for medals, pictures, and such curiosities, as to hear the mountebanks prate and distribute their medicines. This was formerly the Circus, or Agonales, dedicated to sports and pastimes, and is now the greatest market of the city, having three most noble fountains, and the stately palaces of the Pamfilii, St. Giacomo de Spagnoli belonging to that nation, to which add two convents for friars and nuns, all Spanish. In this Church was erected a most stately catafalco, or capellar ardente, for the death of the Queen of Spain; the church was hung with black, and here I heard a Spanish sermon, or funeral oration, and observed the statues, devices, and impresses hung about the walls, the church and pyramid stuck with thousands of lights and tapers, which made a glorious show. The statue of St. James is by Sansovino; there are also some good pictures of Caracci. The *faccidta*, too, is fair. Returning home, I passed by the stumps of old Pasquin, at the corner of a street, called Strada Pontificia; here they still paste up their drolling lampoons and scurrilous papers. This had formerly been one of the best statues for workmanship and art in all the city, as the remaining bust does still show.

21st February, 1645. I walked in the morning up the hill toward the Capuchins, where was then Cardinal Unufrio (brother to the late Pope Urban VIII.) of the same order. He built them a pretty church, full of rare pictures, and there lies the body of St. Felix, that they say still does miracles. The piece at the great altar is by Lanfranco. It is a lofty edifice, with a beautiful avenue of trees, and in a good air. After dinner, passing along the Strada del Corso, I observed the column of Antoninus, passing under Arco Portugallo, which is but a relic, heretofore erected in honor of Domitian, called now Portugallo, from a Cardinal living near it. A little further on the right hand stands the column in a small piazza, here-

tofore set up in honor of M. Aurelius Antoninus, comprehending in a basso-relievo of white marble his hostile acts against the Parthians, Armenians, Germans, etc; but it is now somewhat decayed. On the summit has been placed the image of St. Paul, of gilded copper. The pillar is said to be 161 feet high, ascended by 207 steps, receiving light by fifty-six apertures, without defacing the sculpture.

At a little distance, are the relics of the Emperor's palace, the heads of whose pillars show them to have been Corinthian.

Turning a little down, we came to another piazza, in which stands a sumptuous vase of porphyry, and a fair fountain; but the grace of this market, and indeed the admiration of the whole world, is the Pantheon, now called S. Maria della Rotonda, formerly sacred to all the Gods, and still remaining the most entire antiquity of the city. It was built by Marcus Agrippa, as testifies the architrave of the portico, sustained by thirteen pillars of Theban marble, six feet thick, and fifty-three in height, of one entire stone. In this porch is an old inscription.

Entering the church, we admire the fabric, wholly covered with one cupola, seemingly suspended in the air, and receiving light by a hole in the middle only. The structure is near as high as broad, viz, 144 feet, not counting the thickness of the walls, which is twenty-two more to the top, all of white marble; and, till Urban VIII, converted part of the metal into ordnance of war against the Duke of Parma, and part to make the high altar in St. Peter's, it was all over covered with Corinthian brass, ascending by forty degrees within the roof, or convex, of the cupola, richly carved in octagons in the stone. There are niches in the walls, in which stood heretofore the statues of Jupiter and the other Gods and Goddesses; for here was that Venus which had hung in her ear the other Union\* that Cleopatra was about to dis-

\* And in the cup an UNION shall he throw,  
Richer than that which four successive kings  
In Denmark's crown have worn.

—Shakespeare, "Hamlet," Act v. Sc. 2.

Theobald says, an UNION is the finest sort of pearl, and has its place in all crowns and coronets. The Latin word for a single large pearl, it is hardly necessary to add, is *unio*.

solve and drink up, as she had done its fellow. There are several of these niches, one above another for the celestial, terrestrial, and subterranean deities; but the place is now converted into a church dedicated to the Blessed Virgin and all the Saints. The pavement is excellent, and the vast folding-gates, of Corinthian brass. In a word, it is of all the Roman antiquities the most worthy of notice. There lie interred in this Temple the famous Raphael di Urbino, Perino del Vaga, F. Zuccharo, and other painters.

Returning home, we pass by Cardinal Cajetan's Palace, a noble piece of architecture of Vincenzo Ammanatti, which is the grace of the whole Corso.

22d February, 1645. I went to Trinità del Monte, a monastery of French, a noble church built by Louis XI. and Charles VIII., the chapels well painted, especially that by Zaccara da Volterra, and the cloister with the miracles of their St. Francis de Paulo, and the heads of the French Kings. In the *pergolo* above, the walls are wrought with excellent perspective, especially the St. John; there are the Babylonish dials, invented by Kircher, the Jesuit. This convent, so eminently situated on Mons Pincius, has the entire prospect of Campus Martius, and has a fair garden which joins to the Palazzo di Medici.

23d February, 1645. I went to hear a sermon at St. Giacomo degli Incurabili, a fair church built by F. da Volterra, of good architecture, and so is the hospital, where only desperate patients are brought. I passed the evening at St. Maria del Popolo, heretofore Nero's sepulchre, where his ashes lay many years in a marble chest. To this church joins the monastery of St. Augustine, which has pretty gardens on Mons Pincius, and in the church is the miraculous shrine of the Madonna which Pope Paul III. brought barefooted to the place, supplicating for a victory over the Turks in 1464. In a chapel of the Ghisi, are some rare paintings of Raphael, and noble sculptures. Those two in the choir are by Sansovino, and in the Chapel de Cerasii, a piece of Caravaggio. Here lie buried many great scholars and artists, of which I took notice of this inscription:

*"Hospes, disce novum mortis genus; improba felix,  
Dum trahitur, digitum mordet, et intereo."*

Opposite to the *faccidta* of the church is a superb obelisk full of hieroglyphics, the same that Sennesertus, King of Egypt, dedicated to the Sun; brought to Rome by Augustus, erected in the Circus Maximus, and since placed here by Pope Sextus V. It is eighty-eight feet high, of one entire stone, and placed with great art and engines by the famous Domenico Fontana.

Hence, turning on the right out of the Porto del Popolo, we came to Justinian's gardens, near the Muro Torto, so prominently built as threatening every moment to fall, yet standing so for these thousand years. Under this is the burying place for the common prostitutes, where they are put into the ground, *sans ceremonie*.

24th February, 1645. We walked to St. Roche's and Martine's, near the brink of the Tiber, a large hospital for both sexes. Hence, to the Mausoleum Augusti, between the Tiber and the Via Flaminia, now much ruined, which had formerly contended for its sumptuous architecture. It was intended as a cemetery for the Roman Emperors, had twelve ports, and was covered with a cupola of white marble, environed with stately trees and innumerable statues, all of it now converted into a garden. We passed the afternoon at the Sapienza, a very stately building full of good marbles, especially the portico, of admirable architecture. These are properly the University Schools, where lectures are read on Law, Medicine, and Anatomy, and students perform their exercises.

Hence, we walked to the church of St. Andrea della Valle, near the former Theater of Pompey, and the famous Piccolomini, but given to this church and the Order, who are Theatins. The Barberini have in this place a chapel, of curious incrusted marbles of several sorts, and rare paintings. Under it is a place where St. Sebastian is said to have been beaten with rods before he was shot with darts. The cupola is painted by Lanfranc, an inestimable work, and the whole fabric and monastery adjoining are admirable.

25th February, 1645. I was invited by a Dominican Friar, whom we usually heard preach to a number of Jews, to be godfather to a converted Turk and Jew. The ceremony was performed in the Church of Santa Maria sopra la Minerva, near the Capitol. They were clad in

white; then exorcised at their entering the church with abundance of ceremonies, and, when led into the choir, were baptized by a Bishop, *in pontificalibus*. The Turk lived afterward in Rome, sold hot waters and would bring us presents when he met us, kneeling and kissing the hems of our cloaks; but the Jew was believed to be a counterfeit. This church, situated on a spacious rising, was formerly consecrated to Minerva. It was well built and richly adorned, and the body of St. Catherine di Sienna lies buried here. The paintings of the chapel are by Marcello Venuti; the Madonna over the altar is by Giovanni di Piesole, called the Angelic Painter, who was of the Order of these Monks. There are many charities dealt publicly here, especially at the procession on the Annunciation, where I saw his Holiness, with all the Cardinals, Prelates, etc., *in pontificalibus*; dowries being given to 300 poor girls all clad in white. The Pope had his tiara on his head, and was carried on men's shoulders in an open armchair, blessing the people as he passed. The statue of Christ, at the Columna, is esteemed one of the masterpieces of M. Angelo: innumerable are the paintings by the best artists, and the organ is accounted one of the sweetest in Rome. Cardinal Bembo is interred here. We returned by St. Mark's, a stately church, with an excellent pavement, and a fine piece by Perugino, of the Two Martyrs. Adjoining to this is a noble palace built by the famous Bramante.

26th February, 1645. Ascending the hill, we came to the Forum Trajanum, where his column stands yet entire, wrought with admirable basso-relievo recording the Dacian war, the figures at the upper part appearing of the same proportion with those below. It is ascended by 192 steps, enlightened with 44 apertures, or windows, artificially disposed; in height from the pedestal 140 feet.

It had once the ashes of Trajan and his statue, where now stands St. Peter's of gilt brass, erected by Pope Sextus V. The sculpture of this stupendous pillar is thought to be the work of Apollodorus; but what is very observable is, the descent to the plinth of the pedestal, showing how this ancient city lies now buried in her ruins; this monument being at first set up on a rising

ground. After dinner, we took the air in Cardinal Bentivoglio's delicious gardens, now but newly deceased. He had a fair palace built by several good masters on part of the ruins of Constantine's Baths; well adorned with columns and paintings, especially those of Guido Reni.

27th February, 1645. In the morning Mr. Henshaw and myself walked to the Trophies of Marius, erected in honor of his victory over the Cimbrians, but these now taken out of their niches are placed on the balusters of the Capitol, so that their ancient station is now a ruin. Keeping on our way, we came to St. Croce of Jerusalem, built by Constantine over the demolition of the Temple of Venus and Cupid, which he threw down; and it was here, they report, he deposited the wood of the true Cross, found by his mother, Helena; in honor whereof this church was built, and in memory of his victory over Maxentius when that holy sign appeared to him. The edifice without is Gothic, but very glorious within, especially the roof, and one tribuna (gallery) well painted. Here is a chapel dedicated to St. Helena, the floor whereof is of earth brought from Jerusalem; the walls are of fair mosaic, in which they suffer no women to enter, save once a year. Under the high altar of the Church is buried St. Anastasius, in Lydian marble, and Benedict VII.; and they show a number of relics, exposed at our request; with a phial of our blessed Savior's blood; two thorns of his crown; three chips of the real cross; one of the nails, wanting a point; St. Thomas's doubting finger; and a fragment of the title (put on the cross), being part of a thin board; some of Judas's pieces of silver; and many more, if one had faith to believe it. To this venerable church joins a Monastery, the gardens taking up the space of an ancient amphitheatre.

Hence, we passed beyond the walls out at the Port of St. Laurence, to that Saint's church, and where his ashes are enshrined. This was also built by the same great Constantine, famous for the Coronation of Pietro Altissiodorensis, Emperor of Constantinople, by Honorius II. It is said the corpse of St. Stephen, the proto martyr, was deposited here by that of St. Sebastian, which it had no sooner touched, but Sebastian gave it place of its own accord. The Church has no less than seven privileged altars, and excellent pictures. About the walls

are painted this martyr's sufferings; and, when they built them, the bones of divers saints were translated to other churches. The front is Gothic. In our return, we saw a small ruin of an aqueduct built by Quintus Marcius, the prætor; and so passed through that incomparable straight street leading to Santa Maria Maggiore, to our lodging, sufficiently tired.

We were taken up next morning in seeing the impertinences of the Carnival, when all the world are as mad at Rome as at other places; but the most remarkable were the three races of the Barbary horses, that run in the Strada del Corso without riders, only having spurs so placed on their backs, and hanging down by their sides, as by their motion to stimulate them: then of mares, then of asses, of buffalos, naked men, old and young, and boys, and abundance of idle ridiculous pastime. One thing is remarkable, their acting comedies on a stage placed on a cart, or *plaustrum*, where the scene, or tiring place, is made of boughs in a rural manner, which they drive from street to street with a yoke or two of oxen, after the ancient guise. The streets swarm with prostitutes, buffoons, and all manner of rabble.

1st March, 1645. At the Greek Church, we saw the Eastern ceremonies performed by a Bishop, etc., in that tongue. Here the unfortunate Duke and Duchess of Bouillon received their ashes, it being the first day of Lent. There was now as much trudging up and down of devotees, as the day before of licentious people; all saints alike to appearance.

The gardens of Justinian, which we next visited, are very full of statues and antiquities, especially urns; among which is that of Minutius Felix; a terminus that formerly stood in the Appian way, and a huge colossé of the Emperor Justinian. There is a delicate aviary on the hill; the whole gardens furnished with rare collections, fresh, shady, and adorned with noble fountains. Continuing our walk a mile farther, we came to Pons Milvius, now Mela, where Constantine overthrew Maxentius, and saw the miraculous sign of the cross, *In hoc signo vinces*. It was a sweet morning, and the bushes were full of nightingales. Hence, to Aqua Claudia again, an aqueduct finished by that Emperor at the expense of eight millions. In the afternoon, to Farnese's gardens, near the Campo

Vaccino; and upon the Palatine Mount to survey the ruins of Juno's Temple, in the Piscina, a piazza so-called near the famous bridge built by Antoninus Pius, and re-edified by Pope Sextus IV.

The rest of this week, we went to the Vatican, to hear the sermons, at St. Peter's, of the most famous preachers, who discourse on the same subjects and text yearly, full of Italian eloquence and action. On our Lady day, 25th March, we saw the Pope and Cardinals ride in pomp to the Minerva, the great guns of the Castle of St. Angelo being fired, when he gives portions to 500 *zitelle* (young women), who kiss his feet in procession, some destined to marry, some to be nuns;—the scholars of the college celebrating the blessed Virgin with their compositions. The next day, his Holiness was busied in blessing golden roses, to be sent to several great Princes; the Procurator of the Carmelites preaching on our Savior's feeding the multitude with five loaves, the ceremony ends. The sacrament being this day exposed, and the relics of the Holy Cross, the concourse about the streets is extraordinary. On Palm-Sunday, there was a great procession, after a papal mass.

11th April, 1645. St. Veronica's handkerchief (with the impression of our Savior's face) was exposed, and the next day the spear, with a world of ceremony. On Holy Thursday, the Pope said mass, and afterward carried the Host in procession about the chapel, with an infinity of tapers. This finished, his Holiness was carried in his open chair on men's shoulders to the place where, reading the Bull *In Cæna Domini*, he both curses and blesses all in a breath; then the guns are again fired. Hence, he went to the Ducal hall of the Vatican, where he washed the feet of twelve poor men, with almost the same ceremony as it is done at Whitehall; they have clothes, a dinner, and alms, which he gives with his own hands, and serves at their table; they have also gold and silver medals, but their garments are of white woollen long robes, as we paint the Apostles. The same ceremonies are done by the Conservators and other officers of state at St. John di Lateran; and now the table on which they say our blessed Lord celebrated his last supper is set out, and the heads of the Apostles. In every famous church they are busy in dressing up their pageantries to

represent the Holy Sepulchre, of which we went to visit divers.

On Good Friday, we went again to St. Peter's, where the handkerchief, lance, and cross were all exposed, and worshiped together. All the confession seats were filled with devout people, and at night was a procession of several who most lamentably whipped themselves till the blood stained their clothes, for some had shirts, others upon the bare back, having visors and masks on their faces; at every three or four steps dashing the knotted and raveled whip cord over their shoulders, as hard as they could lay it on; while some of the religious orders and fraternities sung in a dismal tone, the lights and crosses going before, making all together a horrible and indeed heathenish pomp.

The next day, there was much ceremony at St. John di Laterano, so as the whole week was spent in running from church to church, all the town in busy devotion, great silence, and unimaginable superstition.

Easter day, I was awakened by the guns from St. Angelo: we went to St. Peter's, where the Pope himself celebrated mass, showed the relics before-named, and gave a public Benediction.

Monday, we went to hear music in the Chiesa Nova; and, though there were abundance of ceremonies at the other great churches, and great exposure of relics, yet being wearied with sights of this nature, and the season of the year, summer, at Rome being very dangerous, by reason of the heat minding us of returning northward, we spent the rest of our time in visiting such places as we had not yet sufficiently seen. Only I do not forget the Pope's benediction of the *Gonfalone*, or Standard, and giving the hallowed palms; and, on May Day, the great procession of the University and the muleteers at St. Anthony's, and their setting up a foolish May pole in the Capitol, very ridiculous. We therefore now took coach a little out of town, to visit the famous Roma Soterranea, being much like what we had seen at St. Sebastians. Here, in a cornfield, guided by two torches, we crept on our bellies into a little hole, about twenty paces, which delivered us into a large entry that led us into several streets, or alleys, a good depth in the bowels of the earth, a strange and fearful passage for divers miles, as Bosio

has measured and described them in his book. We ever and anon came into pretty square rooms, that seemed to be chapels with altars, and some adorned with very ordinary ancient painting. Many skeletons and bodies are placed on the sides one above the other in degrees like shelves, whereof some are shut up with a coarse flat stone, having engraven on them *Pro Christo*, or a cross and palms, which are supposed to have been martyrs. Here, in all likelihood, were the meetings of the Primitive Christians during the persecutions, as Pliny the Younger describes them. As I was prying about, I found a glass phial, filled (as was conjectured) with dried blood, and two lachrymatories. Many of the bodies, or rather bones (for there appeared nothing else) lay so entire, as if placed by the art of the chirurgeon, but being only touched fell all to dust. Thus, after wandering two or three miles in this subterranean meander, we returned almost blind when we came into the daylight, and even choked by the smoke of the torches. It is said that a French bishop and his retinue adventuring too far into these dens, their lights going out, were never heard of more.

We were entertained at night with an English play at the Jesuits', where we before had dined; and the next day at Prince Galicano's, who himself composed the music to a magnificent opera, where were present Cardinal Pamphilio, the Pope's nephew, the Governors of Rome, the cardinals, the ambassadors, ladies, and a number of nobility and strangers. There had been in the morning a joust and tournament of several young gentlemen on a formal defy, to which we had been invited; the prizes being distributed by the ladies, after the knight-errantry way. The lancers and swordsmen running at tilt against the barriers, with a great deal of clatter, but without any bloodshed, giving much diversion to the spectators, and was new to us travelers.

The next day Mr. Henshaw and I spent the morning in attending the entrance and cavalcade of Cardinal Medici, the ambassador from the Grand Duke of Florence, by the Via Flaminia. After dinner, we went again to the Villa Borghese, about a mile without the city; the garden is rather a park, or a Paradise, contrived and planted with walks and shades of myrtles, cypress, and other trees,

and groves, with abundance of fountains, statues, and bass-relievos, and several pretty murmuring rivulets. Here they had hung large nets to catch woodcocks. There was also a vivary, where, among other exotic fowls, was an ostrich; besides a most capacious aviary; and, in another inclosed part, a herd of deer. Before the palace (which might become the court of a great prince) stands a noble fountain, of white marble, enriched with statues. The outer walls of the house are encrusted with excellent antique bass-relievos, of the same marble, incornished with festoons and niches set with statues from the foundation to the roof. A stately portico joins the palace, full of statues and columns of marble, urns, and other curiosities of sculpture. In the first hall were the Twelve Cæsars, of antique marble, and the whole apartments furnished with pictures of the most celebrated masters, and two rare tables of porphyry, of great value. But of this already: for I often visited this delicious place.

This night were glorious fire-works at the palace of Cardinal Medici before the gate, and lights of several colors all about the windows through the city, which they contrive by setting the candles in little paper lanterns dyed with various colors, placing hundreds of them from story to story; which renders a gallant show.

4th May, 1645. Having seen the entry of the ambassador of Lucca, I went to the Vatican, where, by favor of our Cardinal Protector, Fran. Barberini, I was admitted into the Consistory, heard the ambassador make his oration in Latin to the Pope, sitting on an elevated state, or throne, and changing two pontifical mitres; after which, I was presented to kiss his toe, that is, his embroidered slipper, two Cardinals holding up his vest and surplice; and then, being sufficiently blessed with his thumb and two fingers for that day I returned home to dinner.

We went again to see the medals of Signor Gotefredi, which are absolutely the best collection in Rome.

Passing the Ludovisia Villa, where the petrified human figure lies, found on the snowy Alps; I measured the hydra, and found it not a foot long; the three necks and fifteen heads seem to be but patched up with several pieces of serpents' skins.

5th May, 1645. We took coach, and went fifteen miles out of the city to Frascati, formerly Tusculum, a villa

of Cardinal Aldobrandini, built for a country house; but surpassing, in my opinion, the most delicious places I ever beheld for its situation, elegance, plentiful water, groves, ascents, and prospects. Just behind the palace (which is of excellent architecture) in the centre of the inclosure, rises a high hill, or mountain, all over clad with tall wood, and so formed by nature, as if it had been cut out by art, from the summit whereof falls a cascade, seeming rather a great river than a stream precipitating into a large theatre of water, representing an exact and perfect rainbow, when the sun shines out. Under this, is made an artificial grot, wherein are curious rocks, hydraulic organs, and all sorts of singing birds, moving and chirping by force of the water, with several other pageants and surprising inventions. In the centre of one of these rooms, rises a copper ball that continually dances about three feet above the pavement, by virtue of a wind conveyed secretly to a hole beneath it; with many other devices to wet the unwary spectators, so that one can hardly step without wetting to the skin. In one of these theaters of water, is an Atlas spouting up the stream to a very great height; and another monster makes a terrible roaring with a horn; but, above all, the representation of a storm is most natural, with such fury of rain, wind, and thunder, as one would imagine oneself in some extreme tempest. The garden has excellent walks and shady groves, abundance of rare fruit, oranges, lemons, etc., and the goodly prospect of Rome, above all description, so as I do not wonder that Cicero and others have celebrated this place with such encomiums. The Palace is indeed built more like a cabinet than anything composed of stone and mortar; it has in the middle a hall furnished with excellent marbles and rare pictures, especially those of Gioseppino d'Arpino; the movables are princely and rich. This was the last piece of architecture finished by Giacomo della Porta, who built it for Pietro Cardinal Aldobrandini, in the time of Clement VIII. \*

We went hence to another house and garden not far distant, on the side of a hill called Mondragone, finished by Cardinal Scipio Borghese, an ample and kingly edifice.

\* Cardinal Hippolito Aldobrandini was elected Pope in January, 1592, by the name of Clement VIII., and died in March, 1605.

It has a very long gallery, and at the end a theatre for pastimes, spacious courts, rare grotts, vineyards, olive-grounds, groves and solitudes. The air is so fresh and sweet, as few parts of Italy exceed it; nor is it inferior to any palace in the city itself for statues, pictures, and furniture; but, it growing late, we could not take such particular notice of these things as they deserved.

6th May, 1645. We rested ourselves; and next day, in a coach, took our last farewell of visiting the circumjacent places, going to Tivoli, or the old Tiburtum. At about six miles from Rome, we pass the Teverone, a bridge built by Mammea, the mother of Severus, and so by divers ancient sepulchres, among others that of Valerius Volusi; and near it past the sinking sulphurous river over the Ponte Lucano, where we found a heap, or turret, full of inscriptions, now called the Tomb of Plantius. Arrived at Tivoli, we went first to see the palace d'Este, erected on a plain, but where was formerly an hill. The palace is very ample and stately. In the garden, on the right hand, are sixteen vast conchas of marble, jetting out waters; in the midst of these stands a Janus quadrifrons, that cast forth four girandolas, called from the resemblance (to a particular exhibition in fireworks so named) the Fountana di Spéccho (looking-glass). Near this is a place for tilting. Before the ascent of the palace is the famous fountain of Leda, and not far from that, four sweet and delicious gardens. Descending thence are two pyramids of water, and in a grove of trees near it the fountains of Tethys, Esculapius, Arethusa, Pandora, Pomona, and Flora; then the prancing Pegasus Bacchus, the Grot of Venus, the two Colosses of Melicerta and Sibylla Tiburtina, all of exquisite marble, copper, and other suitable adornments. The Cupids pouring out water are especially most rare, and the urns on which are placed the ten nymphs. The grotts are richly paved with *pietra-commessa*, shells, coral, etc.

Toward Roma Triumphans, leads a long and spacious walk, full of fountains, under which is historized the whole Ovidian Metamorphosis, in rarely sculptured *mezzo rilievo*. At the end of this, next the wall, is the city of Rome as it was in its beauty, of small models, representing that city, with its amphitheatres; naumachi,

thermæ, temples, arches, aqueducts, streets, and other magnificences, with a little stream running through it for the Tiber, gushing out of an urn next to the statue of the river. In another garden, is a noble aviary, the birds artificial, and singing till an owl appears, on which they suddenly change their notes. Near this is the fountain of dragons, casting out large streams of water with great noise. In another grotto, called Grotto di Natura, is an hydraulic organ; and below this are divers stews and fish ponds, in one of which is the statue of Neptune in his chariot on a seahorse, in another a Triton; and lastly, a garden of simples. There are besides in the palace many rare statues and pictures, bedsteads richly inlaid, and sundry other precious movables: the whole is said to have cost the best part of a million.

Having gratified our curiosity with these artificial miracles, and dined, we went to see the so famous natural precipice and cascade of the river Anio, rushing down from the mountains of Tivoli with that fury that, what with the mist it perpetually casts up by the breaking of the water against the rocks, and what with the sun shining on it and forming a natural Iris, and the prodigious depth of the gulf below, it is enough to astonish one that looks on it. Upon the summit of this rock stands the ruins and some pillars and cornices of the Temple of Sibylla Tyburtina, or Albunea, a round fabric, still discovering some of its pristine beauty. Here was a great deal of gunpowder drying in the sun, and a little beneath, mills belonging to the Pope.

And now we returned to Rome. By the way, we were showed, at some distance, the city Præneste, and the Hadrian villa, now only a heap of ruins; and so came late to our lodging.

We now determined to desist from visiting any more curiosities, except what should happen to come in our way, when my companion, Mr. Henshaw, or myself should go to take the air: only I may not omit that one afternoon, diverting ourselves in the Piazza Navona, a mountebank there to allure curious strangers, taking off a ring from his finger, which seemed set with a dull, dark stone a little swelling out, like what we call (though untruly) a toadstone, and wetting his finger a little in his mouth, and then touching it, it emitted a luculent flame as bright

and large as a small wax candle; then, blowing it out, repeated this several times. I have much regretted that I did not purchase the receipt of him for making that composition at what price soever; for though there is a process in Jo. Baptista Porta and others how to do it, yet on several trials they none of them have succeeded.

Among other observations I made in Rome are these: as to coins and medals, ten *asses* make the Roman *denarius*, five the *quinarius*, ten *denarii* an *aureus*; which accompt runs almost exactly with what is now in use of *quatrini*, *baiocs*, *julios*, and *scudi*, each exceeding the other in the proportion of ten. The *sestertius* was a small silver coin, marked H. S. or rather LL<sup>s</sup>, valued two pounds and a half of silver, viz, 250 *denarii*, about twenty-five golden *ducati*. The stamp of the Roman *denarius* varied, having sometimes a Janus bifrons, the head of Roma armed, or with a chariot and two horses, which were called *bigi*; if with four, *quadrigi*: if with a Victoria, so named. The mark of the *denarius* was distinguished > | < thus, or X; the *quinarius* of half value, had, on one side, the head of Rome and V; the reverse, Castor and Pollux on horseback, inscribed *Roma*, etc.

I observed that in the Greek church they made the sign of the cross from the right hand to the left; contrary to the Latins and the schismatic Greeks; gave the benediction with the first, second, and little finger stretched out, retaining the third bent down, expressing a distance of the third Person of the Holy Trinity from the first two.

For sculptors and architects, we found Bernini and Algardi were in the greatest esteem; Fiamingo, as a statuary; who made the Andrea in St. Peter's, and is said to have died mad because it was placed in an ill light. Among the painters, Antonio de la Cornea, who has such an address of counterfeiting the hands of the ancient masters so well as to make his copies pass for originals; Pietro de Cortone, Monsieur Poussin, a Frenchman, and innumerable more. Fioravanti, for armor, plate, dead life, tapestry, etc. The chief masters of music, after Marc Antonio, the best treble, is Cavalier Lauretto, an eunuch; the next Cardinal Bichi's eunuch, Bianchi, tenor, and Nicholai, bass. The Jews in Rome

THE UNIVERSITY OF CHICAGO  
LIBRARY

wore red hats, till the Cardinal of Lyons, being short-sighted, lately saluted one of them, thinking him to be a Cardinal as he passed by his coach; on which an order was made, that they should use only the yellow color. There was now at Rome one Mrs. Ward, an English devotee, who much solicited for an order of Jesuitesses.

At executions I saw one, a gentleman, hanged in his cloak and hat for murder. They struck the malefactor with a club that first stunned him, and then cut his throat. At Naples they use a frame, like ours at Halifax.\*

It is reported that Rome has been once no less than fifty miles in compass, now not thirteen, containing in it 3,000 churches and chapels, monasteries, etc. It is divided into fourteen regions or wards; has seven mountains, and as many campi or valleys; in these are fair parks, or gardens, called villas, being only places of recess and pleasure, at some distance from the streets, yet within the walls.

The bills of exchange I took up from my first entering Italy till I went from Rome, amounting to but 616 *ducati di banco*, though I purchased many books, pictures, and curiosities.

18th May, 1645. I intended to have seen Loretto, but, being disappointed of moneys long expected, I was forced to return by the same way I came, desiring, if possible, to be at Venice by the Ascension, and therefore I diverted to take Leghorn in the way, as well to furnish me with credit by a merchant there, as to take order for transporting such collections as I had made at Rome. When on my way, turning about to behold this once and yet glorious city, from an eminence, I did not, without some regret, give it my last farewell.

Having taken leave of our friends at Rome, where I had sojourned now about seven months, autumn, winter, and spring, I took coach, in company with two courteous Italian gentlemen. In the afternoon, we arrived at a house, or rather castle, belonging to the Duke of Parma, called Caprarola, situate on the brow of a hill, that overlooks a little town, or rather a natural and stupendous rock; witness those vast caves serving now for cellarage, where we were entertained with most generous wine of sev-

\* A guillotine.

eral sorts, being just under the foundation. The palace was built by the famous architect, Vignola, at the cost of Cardinal Alex. Farnese, in form of an octagon, the court in the middle being exactly round, so as rather to resemble a fort, or castle; yet the chambers within are all of them square, which makes the walls exceedingly thick. One of these rooms is so artificially contrived, that from the two opposite angles may be heard the least whisper; they say any perfect square does it. Most of the paintings are by Zuccari. It has a stately entry, on which spouts an artificial fountain within the porch. The hall, chapel, and a great number of lodging chambers are remarkable; but most of all the pictures and witty inventions of Hannibal Caracci; the Dead Christ is incomparable. Behind are the gardens full of statues and noble fountains, especially that of the Shepherds. After dinner, we took horse, and lay that night at Monte Rossi, twenty miles from Rome.

19th May, 1645. We dined at Viterbo, and lay at St. Lorenzo. Next day, at Radicofani, and slept at Turnera.

21st May, 1645. We dined at Sienna, where we could not pass admiring the great church built entirely both within and without with white and black marble in polished squares, by Macarino, showing so beautiful after a shower has fallen. The floor within is of various colored marbles, representing the story of both Testaments, admirably wrought. Here lies Pius II. The bibliotéca is painted by P. Perrugino and Raphael. The life of Æneas Sylvius is in fresco, in the middle are the Three Graces, in antique marble, very curious, and the front of this building, though Gothic, is yet very fine. Among other things, they show St. Catharine's disciplining cell, the door whereof is half cut out into chips by the pilgrims and devotees, being of deal wood.

Setting out hence for Pisa, we went again to see the Duomo in which the Emperor Henry VII. lies buried, poisoned by a monk in the Eucharist. The bending tower was built by Busqueto Delichio, a Grecian architect, and is a stupendous piece of art. In the gallery of curiosities is a fair mummy: the tail of a sea-horse; coral growing on a man's skull; a chariot automaton; two pieces of rock crystal, in one of which is a drop of water, in the other

three or four small worms; two embalmed children; divers petrifications, etc. The garden of simples is well furnished, and has in it the deadly yew, or *taxus*, of the ancients; which Dr. Belluccio, the superintendent, affirms that his workmen cannot endure to clip for above the space of half an hour at a time, from the pain of the head which surprises them.

We went hence from Leghorn, by coach, where I took up ninety crowns for the rest of my journey, with letters of credit for Venice, after I had sufficiently complained of my defeat of correspondence at Rome.

The next day, I came to Lucca, a small but pretty territory and state of itself. The city is neat and well fortified, with noble and pleasant walks of trees on the works, where the gentry and ladies used to take the air. It is situate on an ample plain by the river Serchio, yet the country about it is hilly. The Senate-house is magnificent. The church of St. Michael is a noble piece, as is also St. Fredian, more remarkable to us for the corpse of St. Richard, an English king,\* who died here on his pilgrimage toward Rome. This epitaph is on his tomb:

*Hic rex Richardus requiescit, sceptifer, almus;  
Rex Fuit Anglorum; regnum tenet iste Polorum.  
Regnum demisit; pro Christo cuncta reliquit.  
Ergo, Richardum nobis debet Anglia sanctum.  
Hic genitor Sanctæ Wulburgæ Virginis almæ  
Est Vrillebaldi sancti simul et Vinebaldi,  
Suffragium quorum nobis det regna Polorum.*

Next this, we visited St. Croce, an excellent structure all of marble both without and within, and so adorned as may vie with many of the fairest even in Rome: witness the huge cross, valued at £15,000, above all venerable for that sacred *volto* which (as tradition goes) was miraculously put on the image of Christ, and made by Nicodemus, while the artist, finishing the rest of the body, was meditating what face to set on it. The inhabitants are exceedingly civil to strangers, above all places in Italy, and they speak the purest Italian. It is also cheap living, which causes travelers to set up their rest here more than in Florence, though a more cele-

\* What particular Richard King of England this was, it is impossible to say; the tomb still exists, and has long been a *crux* to antiquaries and travelers.

brated city; besides, the ladies here are very conversable, and the religious women not at all reserved; of these we bought gloves and embroidered stomachers, generally worn by gentlemen in these countries. The circuit of this state is but two easy days' journey, and lies mixed with the Duke of Tuscany's but having Spain for a protector (though the least bigoted of all Roman Catholics), and being one of the fortified cities in Italy, it remains in peace. The whole country abounds in excellent olives, etc.

Going hence for Florence, we dined at Pistoria, where, besides one church, there was little observable: only in the highway we crossed a rivulet of salt water, though many miles from the sea. The country is extremely pleasant, full of gardens, and the roads straight as a line for the best part of that whole day, the hedges planted with trees at equal distances, watered with clear and plentiful streams.

Rising early the next morning we arrived at Poggio Imperiale, being a palace of the Great Duke, not far from the city, having omitted it in my passage to Rome. The ascent to the house is by a stately gallery as it were of tall and overgrown cypress trees for near half a mile. At the entrance of these ranges, are placed statues of the Tiber and Arno, of marble; those also of Virgil, Ovid, Petrarch, and Dante. The building is sumptuous, and curiously furnished within with cabinets of pietra-com-messa in tables, pavements, etc., which is a magnificence, or work, particularly affected at Florence. The pictures are, Adam and Eve by Albert Durer, very excellent; as is that piece of carving in wood by the same hand standing in a cupboard. Here is painted the whole Austrian line; the Duke's mother, sister to the Emperor, the foundress of this palace, than which there is none in Italy that I had seen more magnificently adorned, or furnished.

We could not omit in our passage to re-visit the same, and other curiosities which we had neglected on our first being at Florence. We went, therefore, to see the famous piece of Andrea del Sarto, in the Annunciata. The story is, that the painter in a time of dearth borrowed a sack of corn of the religious of that convent, and repayment being demanded, he wrought it out in this picture, which represents Joseph sitting on a sack of corn, and reading to the

Blessed Virgin; a piece infinitely valued. There fell down in the cloister an old man's face painted on the wall in *fresco*, greatly esteemed, and broke into crumbs; the Duke sent his best painters to make another instead of it, but none of them would presume to touch a pencil where Andrea had wrought, like another Apelles; but one of them was so industrious and patient, that, picking up the fragments, he laid and fastened them so artificioially together, that the injury it had received was hardly discernible. Andrea del Sarto lies buried in the same place. Here is also that picture of Bartolomeo, who having spent his utmost skill in the face of the angel Gabriel, and being troubled that he could not exceed it in the Virgin, he began the body and to finish the clothes, and so left it, minding in the morning to work on the face; but, when he came, no sooner had he drawn away the cloth that was hung before it to preserve it from the dust, than an admirable and ravishing face was found ready painted; at which miracle all the city came in to worship. It is now kept in the Chapel of the Salutation, a place so enriched by devotees, that none in Italy, save Loretto, is said to exceed it. This picture is always covered with three shutters, one of which is of massy silver; methinks it is very brown, the forehead and cheeks whiter, as if it had been scraped. They report that those who have the honor of seeing it never lose their sight — happy then we! Belonging to this church is a world of plate, some whole statues of it, and lamps innumerable, besides the costly vows hung up, some of gold, and a cabinet of precious stones.

Visiting the Duke's repository again, we told at least forty ranks of porphyry and other statues, and twenty-eight whole figures, many rare paintings and relievos, two square columns with trophies. In one of the galleries, twenty-four figures, and fifty antique heads; a Bacchus of M. Angelo, and one of Bandinelli; a head of Bernini, and a most lovely Cupid, of Parian marble; at the further end, two admirable women sitting, and a man fighting with a centaur; three figures in little of Andrea; a huge candlestick of amber; a table of Titian's painting, and another representing God the Father sitting in the air on the Four Evangelists; animals; divers smaller pieces of Raphael; a piece of pure virgin gold, as big as an egg. In the third chamber of rarities is the square

cabinet, valued at 80,000 crowns, showing on every front, a variety of curious work; one of birds and flowers, of *pietra-commessa*; one, a descent from the cross, of M. Angelo; on the third, our Blessed Savior and the Apostles, of amber; and, on the fourth, a crucifix of the same. Between the pictures, two naked Venuses, by Titian; Adam and Eve, by Durer; and several pieces of Portdenone, and del Frate. There is a globe of six feet diameter. In the Armory, were an entire elk, a crocodile, and among the harness, several targets and antique horse-arms, as that of Charles V.; two set with turquoises, and other precious stones; a horse's tail, of a wonderful length. Then, passing the Old Palace, which has a very great hall for feasts and comedies, the roof rarely painted, and the side walls with six very large pictures representing battles, the work of Gio. Vassari. Here is a magazine full of plate; a harness of emeralds; the furnitures of an altar four feet high, and six in length, of massy gold; in the middle is placed the statue of Cosmo II., the bass-relievo is of precious stones, his breeches covered with diamonds; the moldings of this statue, and other ornaments, festoons, etc., are garnished with jewels and great pearls, dedicated to St. Charles, with this inscription, in rubies:

*"Cosimus Secundus Dei gratiâ Magnus Dux Etruriæ ex voto."*

There is also a King on horseback, of massy gold, two feet high, and an infinity of such like rarities. Looking at the Justice, in copper, set up on a column by Cosmo, in 1555, after the victory over Sienna, we were told that the Duke, asking a gentleman how he liked the piece, he answered, that he liked it very well, but that it stood too high for poor men to come at it.

Prince Leopold has, in this city, a very excellent collection of paintings, especially a St. Catherine of P. Veronese; a Venus of marble, veiled from the middle to the feet, esteemed to be of that Greek workman who made the Venus at the Medici's Palace in Rome, altogether as good, and better preserved, an inestimable statue, not long since found about Bologna.

Signor Gaddi is a lettered person, and has divers rarities, statues, and pictures of the best masters, and one bust of marble as much esteemed as the most antique in

Italy, and many curious manuscripts; his best paintings are, a Virgin of del Sarto, mentioned by Vassari, a St. John, by Raphael, and an *Ecce Homo*, by Titian.

The hall of the Academy de la Crusca is hung about with impresses and devices painted, all of them relating to corn sifted from the bran; the seats are made like breadbaskets and other rustic instruments used about wheat, and the cushions of satin, like sacks.

We took our farewell of St. Laurence, more particularly noticing that piece of the Resurrection, which consists of a prodigious number of naked figures, the work of Pontormo. On the left hand is the Martyrdom of St. Laurence, by Bronzino, rarely painted indeed. In a chapel is the tomb of Pietro di Medici, and his brother John, of copper, excellently designed, standing on two lions' feet, which end in foliage, the work of M. Angelo. Over against this, are sepulchres of all the ducal family. The altar has a statue of the Virgin giving suck, and two Apostles. Paulus Jovius has the honor to be buried in the cloister. Behind the choir is the superb chapel of Ferdinand I., consisting of eight faces, four plain, four a little hollowed; in the other are to be the sepulchres, and a niche of paragon, for the statue of the prince now living, all of copper gilt; above, is a large table of porphyry, for an inscription for the Duke, in letters of jasper. The whole chapel, walls, pavement, and roof, are full of precious stones united with the moldings, which are also of gilded copper, and so are the bases and capitals of the columns. The tabernacle, with the whole altar, is inlaid with cornelians, lazuli, serpentine, agates, onyxes, etc. On the other side are six very large columns of rock crystal, eight figures of precious stones of several colors, inlaid in natural figures, not inferior to the best paintings, among which are many pearls, diamonds, amethysts, topazes, sumptuous and sparkling beyond description. The windows without side are of white marble. The library is the architecture of Raphael; before the port is a square vestibule of excellent art, of all the orders, without confusion; the ascent to it from the library is excellent. We numbered eighty-eight shelves, all MSS. and bound in red, chained; in all about 3,500 volumes, as they told us.

The Arsenal has sufficient to arm 70,000 men, accurately preserved and kept, with divers lusty pieces of ordnance.

whereof one is for a ball of 300 pounds weight, and another for 160, which weighs 72,500 pounds.

When I was at Florence, the celebrated masters were: for *pietra-commessa* (a kind of mosaic, or inlaying, of various colored marble, and other more precious stones), Dominico Benetti and Mazotti; the best statuary, Vincentio Brochi. This statuary makes those small figures in plaster and pasteboard, which so resemble copper that, till one handles them, they cannot be distinguished, he has so rare an art of bronzing them; I bought four of him. The best painter, Pietro Beretino di Cortona.

This Duke has a daily tribute for every courtesan, or prostitute, allowed to practice that infamous trade in his dominions, and so has his Holiness the Pope, but not so much in value.

Taking leave of our two jolly companions, Signor Giovanni and his fellow, we took horses for Bologna; and, by the way, alighted at a villa of the Grand Duke's, called Pratolino. The house is a square of four pavilions, with a fair platform about it, balustred with stone, situate in a large meadow, ascending like an amphitheater, having at the bottom a huge rock, with water running in a small channel, like a cascade; on the other side, are the gardens. The whole place seems consecrated to pleasure and summer retirement. The inside of the palace may compare with any in Italy for furniture of tapestry, beds, etc., and the gardens are delicious, and full of fountains. In the grove sits Pan feeding his flock, the water making a melodious sound through his pipe; and a Hercules, whose club yields a shower of water, which, falling into a great shell, has a naked woman riding on the backs of dolphins. In another grotto is Vulcan and his family, the walls richly composed of corals, shells, copper, and marble figures, with the hunting of several beasts, moving by the force of water. Here, having been well washed for our curiosity, we went down a large walk, at the sides whereof several slender streams of water gush out of pipes concealed underneath, that interchangeably fall into each other's channels, making a lofty and perfect arch, so that a man on horseback may ride under it, and not receive one drop of wet. This canopy, or arch of water, I thought one of the most surprising magnificences I had ever seen,

and very refreshing in the heat of the summer. At the end of this very long walk, stands a woman in white marble, in posture of a laundress wringing water out of a piece of linen, very naturally formed, into a vast laver, the work and invention of M. Angelo Buonarotti. Hence, we ascended Mount Parnassus, where the Muses played to us on hydraulic organs. Near this is a great aviary. All these waters came from the rock in the garden, on which is the statue of a giant representing the Apennines, at the foot of which stands this villa. Last of all, we came to the labyrinth, in which a huge colosse of Jupiter throws out a stream over the garden. This is fifty feet in height, having in his body a square chamber, his eyes and mouth serving for windows and door.

We took horse and supped that night at Il Ponte, passing a dreadful ridge of the Apennines, in many places capped with snow, which covers them the whole summer. We then descended into a luxurious and rich plain. The next day we passed through Scarperia, mounting the hills again, where the passage is so straight and precipitous toward the right hand, that we climbed them with much care and danger; lodging at Firenzuolo, which is a fort built among the rocks, and defending the confines of the Great Duke's territories.

The next day we passed by the Pietramala, a burning mountain. At the summit of this prodigious mass of hills, we had an unpleasant way to Pianura, where we slept that night and were entertained with excellent wine. Hence to Scargalasino, and to bed at Loiano. This plain begins about six miles from Bologna.

Bologna belongs to the Pope, and is a famous University, situate in one of the richest spots of Europe for all sorts of provisions. It is built like a ship, whereof the Torre d'Asinelli may go for the mainmast. The city is of no great strength, having a trifling wall about it, in circuit near five miles, and two in length. This Torre d'Asinelli, ascended by 447 steps of a foot rise, seems exceedingly high, is very narrow, and the more conspicuous from another tower called Garisendi, so artificially built of brick (which increases the wonder) that it seems ready to fall. It is not now so high as the other; but they say the upper part was formerly taken down, for fear it should really fall, and do mischief.

Next, we went to see an imperfect church, called St. Petronius, showing the intent of the founder, had he gone on. From this, our guide led us to the schools, which indeed are very magnificent. Thence to St. Dominic's, where that saint's body lies richly enshrined. The stalls, or seats, of this goodly church have the history of the Bible inlaid with several woods, very curiously done, the work of one Fr. Damiano di Bergamo, and a friar of that order. Among other relics, they show the two books of Esdras, written with his own hand. Here lie buried Jac. Andreas, and divers other learned persons. To the church joins the convent, in the quadrangle whereof are old cypresses, said to have been planted by their saint.

Then we went to the palace of the Legate; a fair brick building, as are most of the houses and buildings, full of excellent carving and moldings, so as nothing in stone seems to be better finished or more ornamental; witness those excellent columns to be seen in many of their churches, convents, and public buildings; for the whole town is so cloistered, that one may pass from house to house through the streets without being exposed either to rain or sun.

Before the stately hall of this palace stands the statue of Paul IV. and divers others; also the monument of the coronation of Charles V. The piazza before it is the most stately in Italy, St. Mark's at Venice only excepted. In the center of it is a fountain of Neptune, a noble figure in copper. Here I saw a Persian walking about in a rich vest of cloth of tissue, and several other ornaments, according to the fashion of his country, which much pleased me; he was a young handsome person, of the most stately mien.

I would fain have seen the library of St. Savior, famous for the number of rare manuscripts; but could not, so we went to St. Francis, a glorious pile, and exceedingly adorned within.

After dinner I inquired out a priest and Dr. Montalbano, to whom I brought recommendations from Rome: this learned person invented, or found out, the composition of the *lapis illuminabilis*, or phosphorus. He showed me their property (for he had several), being to retain the light of the sun for some competent time, by a kind of imbibition, by a particular way of calcination. Some

of these presented a blue color, like the flame of brimstone, others like coals of a kitchen fire. The rest of the afternoon was taken up in St. Michael in Bosco, built on a steep hill on the edge of the city, for its fabric, pleasant shade and groves, cellars, dormitory, and prospects, one of the most delicious retirements I ever saw; art and nature contending which shall exceed; so as till now I never envied the life of a friar. The whole town and country to a vast extent are under command of their eyes, almost as far as Venice itself. In this convent there are many excellent paintings of Guido Reni; above all, the little cloister of eight faces, painted by Caracci in *fresco*. The carvings in wood, in the sacristy, are admirable, as is the inlaid work about the chapel, which even emulates the best paintings; the work is so delicate and tender. The paintings of the Savior are of Caracci and Leonardo, and there are excellent things of Raphael which we could not see.

In the church of St. John is a fine piece of St. Cecilia, by Raphael. As to other paintings, there is in the church of St. Gregory an excellent picture of a Bishop giving the habit of St. Bernard to an armed soldier, with several other figures in the piece, the work of Guerchino. Indeed, this city is full of rare pieces, especially of Guido Domenico, and a virgin named Isabella Sirani, now living, who has painted many excellent pieces, and imitates Guido so well, that many skillful artists have been deceived.

At the Mendicants are the Miracles of St. Eloy, by Reni, after the manner of Caravaggio, but better; and here they showed us that famous piece of Christ calling St. Matthew, by Annibal Caracci. The Marquis Magnani has the whole frieze of his hall painted in *fresco* by the same hand.

Many of the religious men nourish those lapdogs which the ladies are so fond of, and which they here sell. They are a pigmy sort of spaniels, whose noses they break when puppies; which, in my opinion, deforms them.

At the end of the turning in one of the wings of the dormitory of St. Michael, I found a paper pasted near the window, containing the dimensions of most of the famous churches in Italy compared with their towers here, and the length of this gallery, a copy whereof I took.

	Braccia*	Piedi di Bologna	Canna di Roma.

Dormitorio de St. Mich. a Bologn. lungo . . . .	254	423	72½

From hence being brought to a subterranean territory of cellars, the courteous friars made us taste a variety of excellent wines; and so we departed to our inn.

The city is famous also for sausages; and here is sold great quantities of Parmegiano cheese, with Botargo, Caviare, etc., which makes some of their shops perfume the streets with no agreeable smell. We furnished ourselves with wash balls, the best being made here, and being a considerable commodity. This place has also been celebrated for lutes made by the old masters, Mollen, Hans Frey, and Nicholas Sconvelt, which were of extraordinary price; the workmen were chiefly Germans. The cattle used for draught in this country (which is very rich and fertile, especially in pasturage) are covered with housings of linen fringed at the bottom, that dangle about them, preserving them from flies, which in summer are very troublesome.

From this pleasant city, we proceeded toward Ferrara, carrying with us a bulletino, or bill of health (customary in all these parts of Italy, especially in the State of Venice) and so put ourselves into a boat that was towed with horses, often interrupted by the sluices (inventions there to raise the water for the use of mills, and to fill the artificial canals) at each of which we stayed till passage was made. We went by the Castle Bentivoglio, and, about night arrived at an ugly inn called *Mal Albergo*, agreeable to its name, whence, after we had supped, we embarked and passed that night through the Fens, where we were so pestered with those flying glow-worms, called *Luccioli*, that one who had never heard of them, would think the country full of sparks of fire. Beating some of them down and applying them to a book, I could read in the dark by the light they afforded.

Quitting our boat, we took coach, and by morning got to Ferrara, where, before we could gain entrance, our

\* A measure of half an ell.

guns and arms were taken from us of custom, the lock being taken off before, as we were advised. The city is in a low marshy country, and therefore well fortified. The houses and streets have nothing of beauty, except the palace and church of St. Benedict, where Ariosto lies buried, and there are some good statues, the palazzo del Diamante, citadel, church of St. Dominico. The market-place is very spacious, having in its centre the figure of Nicholao Olão once Duke of Ferrara, on horseback, in copper. It is, in a word, a dirty town, and, though the streets be large they remain ill paved; yet it is a University and now belongs to the Pope. Though there are not many fine houses in the city, the inn where we lodged was a very noble palace, having an Angel for its sign.

We parted from hence about three in the afternoon, and went some of our way on the canal, and then embarked on the Po; or Padus; by the poets called Eridanus, where they feign Phæton to have fallen after his rash attempt, and where Io was metamorphosed into a cow. There was in our company, among others, a Polonian Bishop, who was exceeding civil to me in this passage, and afterward did me many kindnesses at Venice. We supped this night at a place called Corbua, near the ruins of the ancient city, Adria, which gives name to the Gulf, or Sea. After three miles, having passed thirty on the Po, we embarked in a stout vessel, and through an artificial canal, very straight, we entered the Adige, which carried us by break of day into the Adriatic, and so sailing prosperously by Chioza (a town upon an island in this sea), and Palestina, we came over against Malamocco (the chief port and anchorage where our English merchantmen lie that trade to Venice) about seven at night, after we had stayed at least two hours for permission to land, our bill of health being delivered, according to custom. So soon as we came on shore, we were conducted to the Dogana, where our portmanteaus were visited, and then we got to our lodging, which was at honest Signor Paulo Rhodomante's at the Black Eagle, near the Rialto, one of the best quarters of the town. This journey from Rome to Venice cost me seven pistoles, and thirteen julios.

June, 1645. The next morning, finding myself extremely weary and beaten with my journey, I went to

one of their bagnios, where you are treated after the eastern manner, washing with hot and cold water, with oils, and being rubbed with a kind of strigil of seal-skin, put on the operator's hand like a glove. This bath did so open my pores, that it cost me one of the greatest colds I ever had in my life, for want of necessary caution in keeping myself warm for some time after; for, coming out, I immediately began to visit the famous places of the city; and travelers who come into Italy do nothing but run up and down to see sights, and this city well deserved our admiration, being the most wonderfully placed of any in the world, built on so many hundred islands, in the very sea, and at good distance from the continent. It has no fresh water except what is reserved in cistern from rain, and such as is daily brought from *terra firma* in boats, yet there was no want of it, and all sorts of excellent provisions were very cheap.

It is said that when the Huns overran Italy, some mean fishermen and others left the mainland, and fled for shelter to these despicable and muddy islands, which, in process of time, by industry, are grown to the greatness of one of the most considerable States, considered as a Republic, and having now subsisted longer than any of the four ancient Monarchies, flourishing in great state, wealth, and glory, by the conquest of great territories in Italy, Dacia, Greece, Candia, Rhodes, and Slavonia, and at present challenging the empire of all the Adriatic Sea, which they yearly espouse by casting a gold ring into it with great pomp and ceremony, on Ascension-day; the desire of seeing this was one of the reasons that hastened us from Rome.

The Doge, having heard mass in his robes of state (which are very particular, after the eastern fashion), together with the Senate in their gowns, embarked in their gloriously painted, carved, and gilded Bucentora, environed and followed by innumerable galleys, gondolas, and boats, filled with spectators, some dressed in masquerade, trumpets, music, and cannons. Having rowed about a league into the Gulf, the Duke, at the prow, casts a gold ring and cup into the sea, at which a loud acclamation is echoed from the great guns of the Arsenal, and at the Liddo. We then returned.

Two days after, taking a gondola, which is their water-

coach (for land ones, there are many old men in this city who never saw one, or rarely a horse), we rode up and down the channels, which answer to our streets. These vessels are built very long and narrow, having necks and tails of steel, somewhat spreading at the beak like a fish's tail, and kept so exceedingly polished as to give a great lustre; some are adorned with carving, others lined with velvet (commonly black), with curtains and tassels, and the seats like couches, to lie stretched on, while he who rows, stands upright on the very edge of the boat, and, with one oar bending forward as if he would fall into the sea, rows and turns with incredible dexterity; thus passing from channel to channel, landing his fare, or patron, at what house he pleases. The beaks of these vessels are not unlike the ancient Roman rostrums.

The first public building I went to see was the Rialto, a bridge of one arch over the grand canal, so large as to admit a galley to row under it, built of good marble, and having on it, besides many pretty shops, three ample and stately passages for people without any inconvenience, the two outmost nobly balustered with the same stone; a piece of architecture much to be admired. It was evening, and the canal where the Noblesse go to take the air, as in our Hyde Park, was full of ladies and gentlemen. There are many times dangerous stops, by reason of the multitude of gondolas ready to sink one another; and indeed they affect to lean them on one side, that one who is not accustomed to it, would be afraid of over-setting. Here they were singing, playing on harpsichords, and other music, and serenading their mistresses; in another place, racing, and other pastimes on the water, it being now exceeding hot.

Next day, I went to their Exchange, a place like ours, frequented by merchants, but nothing so magnificent; from thence, my guide led me to the Fondigo di Todeschi, which is their magazine, and here many of the merchants, especially Germans, have their lodging and diet, as in a college. The outside of this stately fabric is painted by Giorgione da Castelfranco, and Titian himself.

Hence, I passed through the Mercera, one of the most delicious streets in the world for the sweetness of it,

and is all the way on both sides tapestried as it were with cloth of gold, rich damasks and other silks, which the shops expose and hang before their houses from the first floor, and with that variety that for near half the year spent chiefly in this city, I hardly remember to have seen the same piece twice exposed; to this add the perfumes, apothecaries' shops, and the innumerable cages of nightingales which they keep, that entertain you with their melody from shop to shop, so that shutting your eyes, you would imagine yourself in the country, when indeed you are in the middle of the sea. It is almost as silent as the middle of a field, there being neither rattling of coaches nor trampling of horses. This street, paved with brick, and exceedingly clean, brought us through an arch into the famous piazza of St. Mark.

Over this porch stands that admirable clock, celebrated, next to that of Strasburg, for its many movements; among which, about twelve and six, which are their hours of Ave Maria, when all the town are on their knees, come forth the three Kings led by a star, and passing by the image of Christ in his Mother's arms, do their reverence, and enter into the clock by another door. At the top of this turret, another automaton strikes the quarters. An honest merchant told me that one day walking in the piazza, he saw the fellow who kept the clock struck with this hammer so forcibly, as he was stooping his head near the bell, to mend something amiss at the instant of striking, that being stunned, he reeled over the battlements, and broke his neck. The buildings in this piazza are all arched, on pillars, paved within with black and white polished marble, even to the shops, the rest of the fabric as stately as any in Europe, being not only marble, but the architecture is of the famous Sansovini, who lies buried in St. Jacomo, at the end of the piazza. The battlements of this noble range of buildings, are railed with stone, and thick-set with excellent statues, which add a great ornament. One of the sides is yet much more Roman-like than the other which regards the sea, and where the church is placed. The other range is plainly Gothic; and so we entered into St. Mark's Church, before which stand two brass pedestals exquisitely cast and figured, which bear as many tall masts

painted red, on which, upon great festivals, they hang flags and streamers. The church is also Gothic; yet for the preciousness of the materials, being of several rich marbles, abundance of porphyry, serpentine, etc., far exceeding any in Rome, St. Peter's hardly excepted. I much admired the splendid history of our blessed Savior, composed all of Mosaic over the *facciata*, below which and over the four chief gates are cast four horses in copper as big as the life, the same that formerly were transported from Rome by Constantine to Byzantium, and thence by the Venetians hither.\* They are supported by eight porphyry columns, of very great size and value. Being come into the church, you see nothing, and tread on nothing, but what is precious. The floor is all inlaid with agates, lazulis, chalcedons, jaspers, porphyries, and other rich marbles, admirable also for the work; the walls sumptuously incrustated, and presenting to the imagination the shapes of men, birds, houses, flowers, and a thousand varieties. The roof is of most excellent Mosaic; but what most persons admire is the new work of the emblematic tree at the other passage out of the church. In the midst of this rich *volto* rise five cupolas, the middle very large and sustained by thirty-six marble columns, eight of which are of precious marbles: under these cupolas is the high altar, on which is a reliquary of several sorts of jewels, engraven with figures, after the Greek manner, and set together with plates of pure gold. The altar is covered with a canopy of ophite, on which is sculptured the story of the Bible, and so on the pillars, which are of Parian marble, that support it. Behind these, are four other columns of transparent and true Oriental alabaster, brought hither out of the mines of Solomon's Temple, as they report. There are many chapels and notable monuments of illustrious persons, dukes, cardinals, etc., as Zeno, J. Soranzi, and others: there is likewise a vast baptistry, of copper. Among other venerable relics is a stone, on which they say our blessed Lord stood preaching to those of Tyre and Sidon, and near the door is an image of Christ, much adorned, esteeming it very sacred, for that a rude fellow striking it they say, there pushed out a torrent of blood. In one

\*They were taken away by Bonaparte to Paris; but in 1815, were sent back to Venice.

of the corners lies the body of St. Isidore, brought hither 500 years since from the island of Chios. A little farther, they show the picture of St. Dominic and Francis, affirmed to have been made by the Abbot Joachim (many years before any of them were born). Going out of the church, they showed us the stone where Alexander III. trod on the neck of the Emperor Frederick Barbarossa, pronouncing that verse of the psalm, "*super basiliscum*," etc. The doors of the church are of massy copper. There are near 500 pillars in this building, most of them porphyry and serpentine, and brought chiefly from Athens, and other parts of Greece, formerly in their power. At the corner of the church, are inserted into the main wall four figures, as big as life, cut in porphyry; which they say are the images of four brothers who poisoned one another, by which means were escheated to the Republic that vast treasury of relics now belonging to the church. At the other entrance that looks toward the sea, stands in a small chapel that statue of our Lady, made (as they affirm) of the same stone, or rock, out of which Moses brought water to the murmuring Israelites at Horeb, or Meriba.

After all that is said, this church is, in my opinion, much too dark and dismal, and of heavy work; the fabric,—as is much of Venice, both for buildings and other fashions and circumstances,—after the Greeks, their next neighbors.

The next day, by favor of the French ambassador, I had admittance with him to view the Reliquary, called here Tesoro di San Marco, which very few, even of travelers, are admitted to see. It is a large chamber full of presses. There are twelve breastplates or pieces of pure golden armor, studded with precious stones, and as many crowns dedicated to St. Mark, by so many noble Venetians, who had recovered their wives taken at sea by the Saracens; many curious vases of agates; the cap, or coronet, of the Dukes of Venice, one of which had a ruby set on it, esteemed worth 200,000 crowns; two unicorns' horns; numerous vases and dishes of agate, set thick with precious stones and vast pearls; divers heads of Saints enchased in gold; a small ampulla, or glass, with our Savior's blood; a great morsel of the real cross; one of the nails; a thorn; a fragment of the column to

which our Lord was bound, when scourged; the standard or ensign, of Constantine; a piece of St. Luke's arm; a rib of St. Stephen; a finger of Mary Magdalen; numerous other things, which I could not remember. But a priest, first vesting himself in his sacerdotalis, with the stole about his neck, showed us the gospel of St. Mark (their tutelar patron) written by his own hand, and whose body they show buried in the church, brought hither from Alexandria many years ago.

The Religious de li Servi have fine paintings of Paolo Veronese, especially the Magdalen.

A French gentleman and myself went to the Courts of Justice, the Senate House, and Ducal Palace. The first court near this church is almost wholly built of several colored sorts of marble, like checkerwork on the outside; this is sustained by vast pillars, not very shapely, but observable for their capitals, and that out of thirty-three no two are alike. Under this fabric is the cloister where merchants meet morning and evening, as also the grave senators and gentlemen, to confer of state affairs, in their gowns and caps, like so many philosophers; it is a very noble and solemn spectacle. In another quadrangle, stood two square columns of white marble, carved, which they said had been erected to hang one of their Dukes on, who designed to make himself Sovereign. Going through a stately arch, there were standing in niches divers statues of great value, among which is the so celebrated Eve, esteemed worth its weight in gold; it is just opposite to the stairs where are two Colossuses of Mars and Neptune, by Sansovino. We went up into a Corridor built with several Tribunals and Courts of Justice; and by a well-contrived staircase were landed in the Senate hall, which appears to be one of the most noble and spacious rooms in Europe, being seventy-six paces long, and thirty-two in breadth. At the upper end, are the Tribunals of the Doge, Council of Ten, and Assistants; in the body of the hall, are lower ranks of seats, capable of containing 1,500 Senators; for they consist of no fewer on grand debates. Over the Duke's throne are the paintings of the Final Judgment, by Tintoret, esteemed among the best pieces in Europe. On the roof are the famous Acts of the Republic, painted by several excellent masters, especially Bassano; next

them, are the effigies of the several Dukes, with their Elogies. Then, we turned into a great Court painted with the Battle of Lepanto, an excellent piece; afterward, into the Chamber of the Council of Ten, painted by the most celebrated masters. From hence, by the special favor of an Illustrissimo, we were carried to see the private Armory of the Palace, and so to the same court we first entered, nobly built of polished white marble, part of which is the Duke's Court, *pro tempore*; there are two wells adorned with excellent work in copper. This led us to the seaside, where stand those columns of ophite stone in the entire piece, of a great height, one bearing St. Mark's Lion, the other St. Theodorus: these pillars were brought from Greece, and set up by Nicholas Baraterius, the architect; between them public executions are performed.

Having fed our eyes with the noble prospect of the Island of St. George, the galleys, gondolas, and other vessels passing to and fro, we walked under the cloister on the other side of this goodly piazza, being a most magnificent building, the design of Sansovino. Here we went into the *Zucca*, or mint; at the entrance, stand two prodigious giants, or Hercules, of white marble, we saw them melt, beat, and coin silver, gold, and copper. We then went up into the Procuratory, and a library of excellent MSS. and books belonging to it and the public. After this, we climbed up the tower of St. Mark, which we might have done on horseback, as it is said one of the French Kings did; there being no stairs, or steps, but returns that take up an entire square on the arches forty feet, broad enough for a coach. This steeple stands by itself, without any church near it, and is rather a watch tower in the corner of the great piazza, 230 feet in height, the foundation exceeding deep; on the top, is an angel, that turns with the wind; and from hence is a prospect down the Adriatic, as far as Istria and the Dalmatian side, with the surprising sight of this miraculous city, lying in the bosom of the sea, in the shape of a lute, the numberless islands tacked together by no fewer than 450 bridges. At the foot of this tower, is a public tribunal of excellent work, in white marble polished, adorned with several brass statues and figures of stone and mezzo-relievo, the performance of some rare artist.

It was now Ascension-week, and the great mart, or fair, of the whole year was kept, everybody at liberty and jolly; the noblemen stalking with their ladies on *choppines*. These are high-heeled shoes, particularly affected by these proud dames, or, as some say, invented to keep them at home, it being very difficult to walk with them; whence, one being asked how he liked the Venetian dames, replied, they were "*mezzo carne, mezzo legno*," half flesh, half wood, and he would have none of them. The truth is, their garb is very odd, as seeming always in masquerade; their other habits also totally different from all nations. They wear very long, crisp hair, of several streaks and colors, which they make so by a wash, disheveling it on the brims of a broad hat that has no crown, but a hole to put out their heads by; they dry them in the sun, as one may see them at their windows. In their tire, they set silk flowers and sparkling stones, their petticoats coming from their very arm-pits, so that they are near three quarters and a half apron; their sleeves are made exceedingly wide, under which their shift-sleeves as wide, and commonly tucked up to the shoulder, showing their naked arms, through false sleeves of tiffany, girt with a bracelet or two, with knots of point richly tagged about their shoulders and other places of their body, which they usually cover with a kind of yellow veil of lawn, very transparent. Thus attired, they set their hands on the heads of two matron-like servants, or old women, to support them, who are mumbling their beads. It is ridiculous to see how these ladies crawl in and out of their gondolas, by reason of their *choppines*; and what dwarfs they appear, when taken down from their wooden scaffolds; of these I saw near thirty together, stalking half as high again as the rest of the world. For courtesans, or the citizens, may not wear *choppines*, but cover their bodies and faces with a veil of a certain glittering taffeta, or lustrée, out of which they now and then dart a glance of their eye, the whole face being otherwise entirely hid with it: nor may the common misses take this habit; but go abroad barefaced. To the corner of these virgin-veils hang broad but flat tassels of curious Point de Venice. The married women go in black veils. The nobility wear the same color, but a fine cloth lined with taffeta, in summer, with fur of the bellies of squirrels, in the winter, which all put on at a

certain day, girt with a girdle embossed with silver, the vest not much different from what our Bachelors of Arts wear in Oxford, and a hood of cloth, made like a sack, cast over their left shoulder, and a round cloth black cap fringed with wool, which is not so comely; they also wear their collar open, to show the diamond button of the stock of their shirt. I have never seen pearls for color and bigness comparable to what the ladies wear, most of the noble families being very rich in jewels, especially pearls, which are always left to the son, or brother who is destined to marry; which the eldest seldom do. The Doge's vest is of crimson velvet, the Procurator's, etc. of damask, very stately. Nor was I less surprised with the strange variety of the several nations seen every day in the streets and piazzas; Jews, Turks, Armenians, Persians, Moors, Greeks, Sclavonians, some with their targets and bucklers, and all in their native fashions, negotiating in this famous Emporium, which is always crowded with strangers.

This night, having with my Lord Bruce taken our places before we went to the Opera, where comedies and other plays are represented in recitative music, by the most excellent musicians, vocal and instrumental, with variety of scenes painted and contrived with no less art of perspective, and machines for flying in the air, and other wonderful notions; taken together, it is one of the most magnificent and expensive diversions the wit of man can invent. The history was, Hercules in Lydia; the scenes changed thirteen times. The famous voices, Anna Rencia, a Roman, and reputed the best treble of women; but there was an eunuch who, in my opinion, surpassed her; also a Genoese that sung an incomparable bass. This held us by the eyes and ears till two in the morning, when we went to the Chetto de san Felice, to see the noblemen and their ladies at basset, a game at cards which is much used; but they play not in public, and all that have inclination to it are in masquerade, without speaking one word, and so they come in, play, lose or gain, and go away as they please. This time of license is only in carnival and this Ascension-week; neither are their theatres open for that other magnificence, or for ordinary comedians, save on these solemnities, they being a frugal and wise people, and exact observers of all sumptuary laws.

There being at this time a ship bound for the Holy Land, I had resolved to embark, intending to see Jerusalem, and other parts of Syria, Egypt and Turkey; but after I had provided all necessaries, laid in snow to cool our drink, bought some sheep, poultry, biscuit, spirits, and a little cabinet of drugs in case of sickness, our vessel (whereof Captain Powell was master), happened to be pressed for the service of the State, to carry provisions to Candia, now newly attacked by the Turks; which altogether frustrated my design, to my great mortification.

On the . . . of June, we went to Padua, to the fair of their St. Anthony, in company of divers passengers. The first *terra firma* we landed at was Fusina, being only an inn where we changed our barge, and were then drawn up by horses through the river Brenta, a straight channel as even as a line for twenty miles, the country on both sides deliciously adorned with country villas and gentlemen's retirements, gardens planted with oranges, figs, and other fruit, belonging to the Venetians. At one of these villas we went ashore to see a pretty contrived palace. Observable in this passage was buying their water of those who farm the sluices; for this artificial river is in some places so shallow, that reserves of water are kept with sluices, which they open and shut with a most ingenious invention, or engine, governed even by a child. Thus they keep up the water, or let it go, till the next channel be either filled by the stop, or abated to the level of the other; for which every boat pays a certain duty. Thus, we stayed near half an hour and more, at three several places, so as it was evening before we got to Padua. This is a very ancient city, if the tradition of Antenor's, being the founder, be not a fiction; but thus speaks the inscription over a stately gate:

*«Hanc antiquissimam urbem literarum omnium asylum, cujus agrum fertilitatis Lumen Natura esse voluit, Antenor condidit, anno ante Christum natum M. Cxviii; Senatus autem Venetus his belli propugnaculis ornavit.»*

The town stands on the river Padus, whence its name, and is generally built like Bologna, on arches and on brick, so that one may walk all around it, dry, and in the shade; which is very convenient in these hot countries, and I think I was never sensible of so burning a

heat as I was this season, especially the next day, which was that of the fair, filled with noble Venetians, by reason of a great and solemn procession to their famous cathedral. Passing by St. Lorenzo, I met with this subscription:

*"Inclytus Antenor patriam vox nisa quietem  
Transtulit huc Henetum Dardanidumq; fuga,  
Expulit Euganeos, Patavinam condidit urbem,  
Quem tegit hic humuli marmore cæsa domus."*

Under the tomb, was a cobbler at his work. Being now come to St. Antony's (the street most of the way straight, well built, and outside excellently painted in *fresco*), we surveyed the spacious piazza, in which is erected a noble statue of copper of a man on horseback, in memory of one Catta Malata, a renowned captain. The church, *à la Greca*, consists of five handsome cupolas, leaded. At the left hand within is the tomb of St. Antony and his altar, about which a mezzo-relievo of the miracles ascribed to him is exquisitely wrought in white marble by the three famous sculptors, Tullius Lombardus, Jacobus Sansovinus, and Hieronymus Compagno. A little higher is the choir, walled parapet-fashion, with sundry colored stone, half relievo, the work of Andrea Reccij. The altar within is of the same metal, which, with the candlestick and bases, is, in my opinion, as magnificent as any in Italy. The wainscot of the choir is rarely inlaid and carved. Here are the sepulchres of many famous persons, as of Rodolphus Fulgosi, etc.; and among the rest, one for an exploit at sea, has a galley exquisitely carved thereon. The procession bore the banners with all the treasure of the cloister, which was a very fine sight.

Hence, walking over the Prato delle Valle, I went to see the convent of St. Justina, than which I never beheld one more magnificent. The church is an excellent piece of architecture, of Andrea Palladio, richly paved, with a stately cupola that covers the high altar enshrining the ashes of that saint. It is of *pietra-commessa*, consisting of flowers very naturally done. The choir is inlaid with several sorts of wood representing the holy history, finished with exceeding industry. At the far end, is that rare painting of St. Justina's Martyrdom, by Paolo Veronese; and a stone on which they told us divers primitive

Christians had been decapitated. In another place (to which leads a small cloister well painted) is a dry well, covered with a brass-work grate, wherein are the bones of divers martyrs. They show also the bones of St. Luke, in an old alabaster coffin; three of the Holy Innocents; and the bodies of St. Maximus and Prosdocius.\* The dormitory above is exceedingly commodious and stately; but what most pleased me, was the old cloister so well painted with the legendary saints, mingled with many ancient inscriptions, and pieces of urns dug up, it seems, at the foundation of the church. Thus, having spent the day in rambles, I returned the next day to Venice.

The arsenal is thought to be one of the best furnished in the world. We entered by a strong port, always guarded, and, ascending a spacious gallery, saw arms of back, breast, and head, for many thousands; in another were saddles; over them, ensigns taken from the Turks. Another hall is for the meeting of the Senate; passing a grall, are the smiths' forges, where they are continually employed on anchors and iron work. Near it is a well of fresh water, which they impute to two rhinoceros's horns which they say lie in it, and will preserve it from ever being empoisoned. Then we came to where the carpenters were building their magazines of oars, masts, etc., for an hundred galleys and ships, which have all their apparel and furniture near them. Then the foundry, where they cast ordnance; the forge is 450 paces long, and one of them has thirteen furnaces. There is one cannon, weighing 16,573 pounds, cast while Henry the Third dined, and put into a galley built, rigged, and fitted for launching within that time. They have also arms for twelve galeasses, which are vessels to row, of almost 150 feet long, and thirty wide, not counting prow or poop, and contain twenty-eight banks of oars, each seven men, and to carry 1,300 men, with three masts. In another, a magazine for fifty galleys, and place for some hundreds more. Here stands the Bucentaur, with a most ample deck, and so contrived that the slaves are not seen, having on the poop a throne for the Doge to sit, when he goes in triumph to espouse the Adriatic. Here is also a gallery of 200 yards long for cables, and above that a magazine of hemp. Opposite these, are the

\* St. Peter's bishopric, first Bishop of Padua.

saltpetre houses, and a large row of cells, or houses, to protect their galleys from the weather. Over the gate, as we go out, is a room full of great and small guns, some of which discharge six times at once. Then, there is a court full of cannon, bullets, chains, grapples, grenades, etc., and over that arms for 800,000 men, and by themselves arms for 400, taken from some that were in a plot against the state; together with weapons of offense and defense for sixty-two ships; thirty-two pieces of ordnance, on carriages taken from the Turks, and one prodigious mortar-piece. In a word, it is not to be reckoned up what this large place contains of this sort. There were now twenty-three galleys, and four galley-grossi, of 100 oars to a side. The whole arsenal is walled about, and may be in compass about three miles, with twelve towers for the watch, besides that the sea environs it. The workmen, who are ordinarily 500, march out in military order, and every evening receive their pay through a small hole in the gate where the governor lives.

The next day, I saw a wretch executed, who had murdered his master, for which he had his head chopped off by an ax that slid down a frame of timber, between the two tall columns in St. Mark's piazza, at the sea-brink; the executioner striking on the ax with a beetle; and so the head fell off the block.

Hence, by Gudala, we went to see Grimani's Palace, the portico whereof is excellent work. Indeed, the world cannot show a city of more stately buildings, considering the extent of it, all of square stone, and as chargeable in their foundations as superstructure, being all built on piles at an immense cost. We returned home by the church of St. Johanne and Paulo, before which is, in copper, the statue of Bartolomeo Colone, on horseback, double gilt, on a stately pedestal, the work of Andrea Verrochio, a Florentine. This is a very fine church, and has in it many rare altarpieces of the best masters, especially that on the left hand, of the Two Friars slain, which is of Titian.

The day after, being Sunday, I went over to St. George's to the ceremony of the schismatic Greeks, who are permitted to have their church, though they are at defiance with Rome. They allow no carved images, but

many painted, especially the story of their patron and his dragon. Their rites differ not much from the Latins, save that of communicating in both species, and distribution of the holy bread. We afterward fell into a dispute with a Candiote, concerning the procession of the Holy Ghost. The church is a noble fabric.

The church of St. Zachary is a Greek building, by Leo IV., Emperor, and has in it the bones of that prophet, with divers other saints. Near this, we visited St. Luke's, famous for the tomb of Arcin.

Tuesday, we visited several other churches, as Santa Maria, newly incrusted with marble on the outside, and adorned with porphyry, ophite, and Spartan stone. Near the altar and under the organ, are sculptures, that are said to be of the famous artist Praxiteles. To that of St. Paul I went purposely, to see the tomb of Titian. Then to St. John the Evangelist, where among other heroes, lies Andrea Baldarius, the inventor of ours applied to great vessels for fighting.

We also saw St. Roche, the roof whereof is, with the school, or hall, of that rich confraternity, admirably painted by Pintoretto, especially the Crucifix in the *sacristia*. We saw also the church of St. Sebastian, and Carmelites' monastery.

Next day, taking our gondola at St. Mark's, I passed to the island of St. George Maggiore, where is a Convent of Benedictines, and a well-built church of Andrea Palladio, the great architect. The pavement, cupola, choir, and pictures, very rich and sumptuous. The cloister has a fine garden to it, which is a rare thing at Venice, though this is an island a little distant from the city; it has also an olive orchard, all environed by the sea. The new cloister now building has a noble staircase paved with white and black marble.

From hence, we visited St. Spirito, and St. Laurence, fair churches in several islands; but most remarkable is that of the Padri Olivetani, in St. Helen's island, for the rare paintings and carvings, with inlaid work, etc.

The next morning, we went again to Padua, where, on the following day, we visited the market, which is plentifully furnished, and exceedingly cheap. Here we saw the great hall, built in a spacious piazza, and one of the most magnificent in Europe; its ascent is by steps a

good height, of a reddish marble polished, much used in these parts, and happily found not far off; it is almost 200 paces long, and forty in breadth, all covered with lead, without any support of columns. At the further end stands the bust, in white marble, of Titus Livius, the historian. In this town is the house wherein he was born, full of inscriptions, and pretty fair.

Near to the monument of Speron Speroni, is painted on the ceiling the celestial zodiac, and other astronomical figures; without side, there is a corridor, in manner of a balcony, of the same stone; and at the entry of each of the three gates is the head of some famous person, as Albert Eremitano, Julio Paullo (lawyers), and Peter Aponius. In the piazza is the Podesta's and Capitano Grande's Palace, well built; but above all, the Monte Pietà, the front whereof is of most excellent architecture. This is a foundation of which there is one in most of the cities in Italy, where there is a continual bank of money to assist the poorer sort, on any pawn, and at reasonable interest, together with magazines for deposit of goods, till redeemed.

Hence, to the Schools of this flourishing and ancient University, especially for the study of physic and anatomy. They are fairly built in quadrangle, with cloisters beneath, and above with columns. Over the great gate are the arms of the Venetian State, and under the lion of St. Mark.

*Sic ingredere, ut teipso quotidie doctior; sic egredere ut indies Patriæ Christianæq; Republicæ utilior evadas; ita demum Gymnasium à te feliciter se ornatum existimabit.*

CIC. IX.

About the court walls, are carved in stone and painted the blazons of the Consuls of all the nations, that from time to time have had that charge and honor in the University, which at my being there was my worthy friend Dr. Rogers, who here took that degree.

The Schools for the lectures of the several sciences are above, but none of them comparable, or so much frequented, as the theater for anatomy, which is excellently contrived both for the dissector and spectators. I was this day invited to dinner, and in the afternoon (30th July) received my *matricula*, being resolved to spend

some months here at study, especially physic and anatomy, of both which there were now the most famous professors in Europe. My *matricula* contained a clause, that I, my goods, servants, and messengers, should be free from all tolls and reprises, and that we might come, pass, return, buy, or sell, without any toll, etc.

The next morning, I saw the garden of simples, rarely furnished with plants, and gave order to the gardener to make me a collection of them for an *hortus hyemalis*, by permission of the Cavalier Dr. Veslingius, then Prefect and Botanic Professor as well as of Anatomy.

This morning, the Earl of Arundel,\* now in this city, a famous collector of paintings and antiquities, invited me to go with him to see the garden of Mantua, where, as one enters, stands a huge *colosse* of Hercules. From hence to a place where was a room covered with a noble cupola, built purposely for music; the fillings up, or cove, between the walls, were of urns and earthen pots, for the better sounding; it was also well painted. After dinner, we walked to the Palace of Foscari all' Arena, there remaining yet some appearances of an ancient theater, though serving now for a court only before the house. There were now kept in it two eagles, a crane, a Mauritanian sheep, a stag, and sundry fowls, as in a vivary.

Three days after, I returned to Venice, and passed over to Murano, famous for the best glasses in the world, where having viewed their furnaces, and seen their work, I made a collection of divers curiosities and glasses, which I sent for England by long sea. It is the white flints they have from Pavia, which they pound and sift exceedingly small, and mix with ashes made of a seaweed brought out of Syria, and a white sand, that causes this manufacture to excel. The town is a Podestaria by itself, at some miles distant on the sea from Venice, and like it, built on several small islands. In this place, are excellent oysters, small and well tasted like our Colchester, and they were the first, as I remember, that I ever could eat; for I had naturally an aversion to them.

At our return to Venice, we met several gondolas full of Venetian ladies, who come thus far in fine weather to

\* The celebrated Thomas, Earl of Arundel, part of whose collection was eventually procured for the University of Oxford by Evelyn, and is distinguished by the name *Marmora Arundeliana*.

take the air, with music and other refreshments. Besides that, Murano is itself a very nobly built town, and has divers noblemen's palaces in it, and handsome gardens.

In coming back, we saw the islands of St. Christopher and St. Michael, the last of which has a church enriched and incrustated with marbles and other architectonic ornaments, which the monks very courteously showed us. It was built and founded by Margaret Emiliana of Verona, a famous courtesan, who purchased a great estate, and by this foundation hoped to commute for her sins. We then rowed by the isles of St. Nicholas, whose church, with the monuments of the Justinian family, entertained us awhile; and then got home.

The next morning, Captain Powell, in whose ship I was to embark toward Turkey, invited me on board, lying about ten miles from Venice, where we had a dinner of English powdered beef and other good meat, with store of wine and great guns, as the manner is. After dinner, the Captain presented me with a stone he had lately brought from Grand Cairo, which he took from the mummy-pits, full of hieroglyphics; I drew it on paper with the true dimensions, and sent it in a letter to Mr. Henshaw to communicate to Father Kircher, who was then setting forth his great work "*Obeliscus Pamphilius*," where it is described, but without mentioning my name. The stone was afterward brought for me into England, and landed at Wapping, where, before I could hear of it, it was broken into several fragments, and utterly defaced, to my no small disappointment.

The boatswain of the ship also gave me a hand and foot of a mummy, the nails whereof had been overlaid with thin plates of gold, and the whole body was perfect, when he brought it out of Egypt; but the avarice of the ship's crew broke it to pieces, and divided the body among them. He presented me also with two Egyptian idols, and some loaves of the bread which the Coptics use in the Holy Sacrament, with other curiosities.

8th August, 1645. I had news from Padua of my election to be *Syndicus Artistarum*, which caused me, after two days idling in a country villa with the Consul of Venice, to hasten thither, that I might discharge myself of that honor, because it was not only chargeable, but would have hindered my progress, and they chose a

Dutch gentleman in my place, which did not well please my countrymen, who had labored not a little to do me the greatest honor a stranger is capable of in that University. Being freed from this impediment, and having taken leave of Dr. Janicinus, a Polonian, who was going as physician in the Venetian galleys to Candia, I went again to Venice, and made a collection of several books and some toys. Three days after, I returned to Padua, where I studied hard till the arrival of Mr. Henshaw, Bramstone, and some other English gentlemen whom I had left at Rome, and who made me go back to Venice, where I spent some time in showing them what I had seen there.

26th September, 1645. My dear friend, and till now my constant fellow-traveler, Mr. Thicknesse, being obliged to return to England upon his particular concern, and who had served his Majesty in the wars, I accompanied him part of his way, and, on the 28th, returned to Venice.

29th September, 1645. Michaelmas day, I went with my Lord Mowbray (eldest son to the Earl of Arundel, and a most worthy person) to see the collection of a noble Venetian, Signor Rugini. He has a stately palace, richly furnished with statues and heads of Roman Emperors, all placed in an ample room. In the next, was a cabinet of medals, both Latin and Greek, with divers curious shells and two fair pearls in two of them; but, above all, he abounded in things petrified, walnuts, eggs in which the yoke rattled, a pear, a piece of beef with the bones in it, a whole hedgehog, a plaice on a wooden trencher turned into stone and very perfect, charcoal, a morsel of cork yet retaining its levity, sponges, and a piece of taffety part rolled up, with innumerable more. In another cabinet, supported by twelve pillars of oriental agate, and railed about with crystal, he showed us several noble intaglios of agate, especially a head of Tiberius, a woman in a bath with her dog, some rare cornelians, onyxes, crystals, etc., in one of which was a drop of water not congealed, but moving up and down, when shaken; above all, a diamond which had a very fair ruby growing in it; divers pieces of amber, wherein were several insects, in particular one cut like a heart that contained in it a salamander without the least

defect, and many pieces of mosaic. The fabric of this cabinet was very ingenious, set thick with agates, turquoises, and other precious stones, in the midst of which was an antique of a dog in stone scratching his ear, very rarely cut, and comparable to the greatest curiosity I had ever seen of that kind for the accurateness of the work. The next chamber had a bedstead all inlaid with agates, crystals, cornelians, lazuli, etc., esteemed worth 16,000 crowns; but, for the most part, the bedsteads in Italy are of forged iron gilded, since it is impossible to keep the wooden ones from the cinices.

From hence, I returned to Padua, when that town was so infested with soldiers, that many houses were broken open in the night, some murders committed, and the nuns next our lodging disturbed, so as we were forced to be on our guard with pistols and other fire-arms to defend our doors; and indeed the students themselves take a barbarous liberty in the evenings when they go to their strumpets, to stop all that pass by the house where any of their companions in folly are with them. This custom they call *chi vali*, so as the streets are very dangerous, when the evenings grow dark; nor is it easy to reform this intolerable usage, where there are so many strangers of several nations.

Using to drink my wine cooled with snow and ice, as the manner here is, I was so afflicted with an angina and sore throat, that it had almost cost me my life. After all the remedies Cavalier Veslingius, chief professor here, could apply, old Salvatico (that famous physician) being called, made me be cupped, and scarified in the back in four places; which began to give me breath, and consequently life; for I was in the utmost danger; but, God being merciful to me, I was after a fortnight abroad again; when, changing my lodging, I went over against Pozzo Pinto; where I bought for winter provision 3,000 weight of excellent grapes, and pressed my own wine, which proved incomparable liquor.

This was on roth of October. Soon after came to visit me from Venice Mr. Henry Howard, grandchild to the Earl of Arundel, Mr. Bramstone, son to the Lord Chief Justice, and Mr. Henshaw, with whom I went to another part of the city to lodge near St. Catherine's over against the monastery of nuns, where we hired the whole house,

and lived very nobly. Here I learned to play on the theorb, thought by Signor Dominico Bassano, who had a daughter married to a doctor of laws, that played and sung to nine several instrumenta, with that skill and address as few masters in Italy exceeded her; she likewise composed divers excellent pieces: I had never seen any play on the Naples viol before. She presented me afterward with two recitatives of hers, both words and music.

31st October, 1645. Being my birthday, the nuns of St. Catherine's sent me flowers of silkwork. We were very studious all this winter till Christmas, when on Twelfth-day, we invited all the English and Scots in town to a feast, which sunk our excellent wine considerably.

1645 46. In January, Signor Molino was chosen Doge of Venice, but the extreme snow that fell, and the cold, hindered my going to see the solemnity, so as I stirred not from Padua till Shrovetide, when all the world repair to Venice, to see the folly and madness of the Carnival; the women, men, and persons of all conditions disguising themselves in antique dresses, with extravagant music and a thousand gambols, traversing the streets from house to house, all places being then accessible and free to enter. Abroad, they fling eggs filled with sweet water, but sometimes not over-sweet. They also have a barbarous custom of hunting bulls about the streets and piazzas, which is very dangerous, the passages being generally narrow. The youth of the several wards and parishes contend in other masteries and pastimes, so that it is impossible to recount the universal madness of this place during this time of license. The great banks are set up for those who will play at bassett; the comedians have liberty, and the operas are open; witty pasquils are thrown about, and the mountebanks have their stages at every corner. The diversions which chiefly took me up was three noble operas, where were excellent voices and music, the most celebrated of which was the famous Anna Rencia, whom we invited to a fish dinner after four days in Lent, when they had given over at the theater. Accompanied with an eunuch whom she brought with her, she entertained us with rare music, both of them singing to a harpsichord. It growing late, a gentleman of Venice

came for her, to show her the galleys, now ready to sail for Candia. This entertainment produced a second, given us by the English consul of the merchants, inviting us to his house, where he had the Genoese, the most celebrated bass in Italy, who was one of the late opera band. This diversion held us so late at night, that, conveying a gentlewoman who had supped with us to her gondola at the usual place of landing, we were shot at by two carbines from another gondola, in which were a noble Venetian and his courtesan unwilling to be disturbed, which made us run in and fetch other weapons, not knowing what the matter was, till we were informed of the danger we might incur by pursuing it farther.

Three days after this, I took my leave of Venice, and went to Padua, to be present at the famous anatomy lecture, celebrated here with extraordinary apparatus, lasting almost a whole month. During this time, I saw a woman, a child, and a man dissected with all the manual operations of the surgeon on the human body. The one was performed by Cavalier Veslingius and Dr. Jo. Athelsteninus Leonœnas, of whom I purchased those rare tables of veins and nerves, and caused him to prepare a third of the lungs, liver, and *nervi sexti par:* with the gastric veins, which I sent into England, and afterward presented to the Royal Society, being the first of that kind that had been seen there, and, for aught I know, in the world, though afterward there were others. When the anatomy lectures, which were in the mornings, were ended, I went to see cures done in the hospitals; and certainly as there are the greatest helps and the most skillful physicians, so there are the most miserable and deplorable objects to exercise upon. Nor is there any, I should think, so powerful an argument against the vice reigning in this licentious country, as to be spectator of the misery these poor creatures undergo. They are indeed very carefully attended, and with extraordinary charity.

20th March, 1646. I returned to Venice, where I took leave of my friends.

22d March, 1646. I was invited to excellent English potted venison, at Mr. Hobbson's, a worthy merchant.

23d March, 1646. I took my leave of the Patriarch and the Prince of Wirtemberg, and Monsieur Grotius (son of the learned Hugo) now going as commander to Candia;

and, in the afternoon, received of Vandervoort, my merchant, my bills of exchange of 300 ducats for my journey. He showed me his rare collection of Italian books, esteemed very curious, and of good value.

The next day, I was conducted to the Ghetto, where the Jews dwell together in as a tribe or ward, where I was present at a marriage. The bride was clad in white, sitting in a lofty chair, and covered with a white veil; then two old Rabbis joined them together, one of them holding a glass of wine in his hand, which, in the midst of the ceremony, pretending to deliver to the woman, he let fall, the breaking whereof was to signify the frailty of our nature, and that we must expect disasters and crosses amid all enjoyments. This done we had a fine banquet, and were brought into the bride-chamber, where the bed was dressed up with flowers, and the counterpane strewn in works. At this ceremony, we saw divers very beautiful Portuguese Jewesses, with whom we had some conversation.

I went to the Spanish Ambassador with Bonifacio, his confessor, and obtained his pass to serve me in the Spanish dominions; without which I was not to travel, in this pompous form:

*"Don Gaspar de Teves y Guzman, Marques de la Fuente, Señor Le Lerena y Veracruz, Commendador de Colos, en la Orden de Sant Yago, Alcalde Mayor perpetuo y Escrivano Mayor de la Ciudad de Sevilla, Gentilhombre de la Camara de S. M. su Azmilero Mayor, de su Consejo, su Embaxador extraordinario a los Principes de Italia, y Alemania, y a esta serenissima Republica de Venetia, etc. Haviendo de partir de esta Ciudad para La Milan el Signior Cavallero Evelyn Ingles, con un Criado, mi han pedido Passa-porte para los Estados de su M. Le he mandado dar el presente, firmando de mi mano, y sellado con el sello de mis armas, por el qual encargo a todos los menestros de S. M. antes quien le presentase y a los que no lo son, supplico les dare passar libramente sin permitir que se le haya vexacion alguna antes mandar le las favor para continuar su viage. Fecho en Venecia a 24 del mes de Marzo del año 1646.*

*Mar. de la Fuentes, etc."*

Having packed up my purchases of books, pictures, casts, treacle, etc. (the making an extraordinary ceremony whereof I had been curious to observe, for it is extremely pompous and worth seeing), I departed from Venice, accompanied with Mr. Waller (the celebrated

poet), now newly gotten out of England, after the Parliament had extremely worried him for attempting to put in execution the commission of Array, and for which the rest of his colleagues were hanged by the rebels.

The next day, I took leave of my comrades at Padua, and receiving some directions from Dr. Salvatico as to the care of my health, I prepared for my journey toward Milan.

It was Easter-Monday that I was invited to breakfast at the Earl of Arundel's. I took my leave of him in his bed, where I left that great and excellent man in tears on some private discourse of crosses that had befallen his illustrious family, particularly the undutifulness of his grandson Philip turning Dominican Friar (since Cardinal of Norfolk), and the misery of his country now embroiled in civil war. He caused his gentleman to give me directions, all written with his own hand, what curiosities I should inquire after in my journey; and, so enjoining me to write sometimes to him, I departed. There stayed for me below, Mr. Henry Howard (afterward Duke of Norfolk), Mr. J. Digby, son of Sir Kenelm Digby, and other gentlemen, who conducted me to the coach.

The famous lapidaries of Venice for false stones and pastes, so as to emulate the best diamonds, rubies, etc., were Marco Terrasso and Gilbert.

An account of what Bills of Exchange I took up at Venice since my coming from Rome, till my departure from Padua:

11th Aug., 1645	.	.	.	200
7th Sept.	.	.	.	135
1st Oct.	.	.	.	100
15th Jan., 1646	.	.	.	100
23d April	.	.	.	300

835 Ducati di Banco.

In company, then, with Mr. Waller, one Captain Wray (son of Sir Christopher, whose father had been in arms against his Majesty, and therefore by no means welcome to us), with Mr. Abdy, a modest and learned man, we got that night to Vicenza, passing by the Euganean hills, celebrated for the prospects and furniture of rare simples, which we found growing about them. The ways were something deep, the whole country flat and even as a

bowling-green. The common fields lie square, and are orderly planted with fruit trees, which the vines run and embrace, for many miles, with delicious streams creeping along the ranges.

Vicenza is a city in the Marquisate of Treviso, yet appertaining to the Venetians, full of gentlemen and splendid palaces, to which the famous Palladio, born here, has exceedingly contributed, having been the architect. Most conspicuous is the Hall of Justice; it has a tower of excellent work; the lower pillars are of the first order; those in the three upper corridors are Doric; under them, are shops in a spacious piazza. The hall was built in imitation of that at Padua, but of a nobler design, *à la moderne*. The next morning, we visited the theater, as being of that kind the most perfect now standing, and built by Palladio, in exact imitation of the ancient Romans, and capable of containing 5,000 spectators. The scene, which is all of stone, represents an imperial city, the order Corinthian, decorated with statues. Over the Scenario is inscribed: "*Virtuti ac Genio Olympior: Academia Theatrum hoc à fundamentis erexit Palladio Architect: 1584.*" The scene declines eleven feet, the *soffito* painted with clouds. To this there joins a spacious hall for solemn days to ballot in, and a second for the Academics. In the piazza is also the *podesta*, or governor's house, the *facciata* being of the Corinthian order, very noble. The piazza itself is so large as to be capable of jousts and tournaments, the nobility of this city being exceedingly addicted to this knight-errantry, and other martial diversions. In this place are two pillars in imitation of those at St. Mark's at Venice, bearing one of them a winged lion, the other the statue of St. John the Baptist.

In a word, this sweet town has more well-built palaces than any of its dimensions in all Italy, besides a number begun and not yet finished (but of stately design) by reason of the domestic dissensions between them and those of Brescia, fomented by the sage Venetians, lest by combining, they might think of recovering their ancient liberty. For this reason, also, are permitted those disorders and insolences committed at Padua among the youth of these two territories. It is no dishonor in this country to be some generations in finishing their palaces,

that without exhausting themselves by a vast expense at once, they may at last erect a sumptuous pile. Count Oleine's Palace is near perfected in this manner. Count Ulmarini is more famous for his gardens, being without the walls, especially his *cedrario*, or conserve of oranges, eleven score of my paces long, set in order and ranges, making a canopy all the way by their intermixing branches for more than 200 of my single paces, and which being full of fruit and blossoms, was a most delicious sight. In the middle of this garden, was a cupola made of wire, supported by slender pillars of brick, so closely covered with ivy, both without and within, that nothing was to be perceived but green; between the arches there dangled festoons of the same. Here is likewise a most inextricable labyrinth.

I had in this town recommendation to a very civil and ingenious apothecary, called Angelico, who had a pretty collection of paintings. I would fain have visited a palace, called the Rotunda, which was a mile out of town, belonging to Count Martio Capra; but one of our companions hastening to be gone, and little minding anything save drinking and folly, caused us to take coach sooner than we should have done.

A little from the town, we passed the Campo Martio, set out in imitation of ancient Rome, wherein the nobles exercised their horses, and the ladies make the *Corso*; it is entered by a stately triumphal arch, the invention of Palladio.

Being now set out for Verona, about midway we dined at Ostarla Nova, and came late to our resting-place, which was the Cavaletto, just over the monument of the Scalageri,\* formerly princes of Verona, adorned with many devices in stone of ladders, alluding to the name.

Early next morning, we went about the city, which is built on the gentle declivity, and bottom of a hill, environed in part with some considerable mountains and downs of fine grass, like some places in the south of England, and, on the other side, having the rich plain where Caius Marius overthrew the Cimbrians. The city is divided in the midst by the river Adige, over which are divers stately bridges, and on its banks are many goodly palaces, whereof one is well painted in *chiaro-oscuro*

\*Or della Scala.

on the outside, as are divers in this dry climate of Italy.

The first thing that engaged our attention and wonder, too, was the amphitheater, which is the most entire of ancient remains now extant. The inhabitants call it the *ARENA*: it has two porticos, one within the other, and is thirty-four rods long, twenty-two in breadth, with forty-two ranks of stone benches, or seats, which reach to the top. The vastness of the marble stones is stupendous. "*L. V. Flaminius, Consul. anno. urb. con. liii.*" This I esteem to be one of the noblest antiquities in Europe, it is so vast and entire, having escaped the ruins of so many other public buildings for above 1,400 years.

There are other arches, as that of the victory of Marius; temples, aqueducts, etc., showing still considerable remains in several places of the town, and how magnificent it has formerly been. It has three strong castles and a large and noble wall. Indeed, the whole city is bravely built, especially the Senate house, where we saw those celebrated statues of Cornelius Nepos, *Æmilius* Marcus, Plinius, and Vitruvius, all having honored Verona by their birth; and, of later date, Julius Cæsar Scaliger, that prodigy of learning.

In the evening we saw the garden of Count Giusti's villa where are walks cut out of the main rock, from whence we had a pleasant prospect of Mantua and Parma, though at great distance. At the entrance of this garden, grows the goodliest cypress, I fancy, in Europe, cut in a pyramid; it is a prodigious tree both for breadth and height, entirely covered, and thick to the base.

Dr. Cortone, a civilian, showed us, among other rarities, a St. Dorothea, of Raphael. We could not see the rare drawings, especially of Parmensis, belonging to Dr. Marcello, another advocate, on account of his absence.

Verona deserved all those eulogies Scaliger has honored it with; for in my opinion, the situation is the most delightful I ever saw, it is so sweetly mixed with rising ground and valleys, so elegantly planted with trees on which Bacchus seems riding as it were in triumph every autumn, for the vines reach from tree to tree; here, of all places I have seen in Italy, would I fix a residence. Well has that learned man given it the name of the very eye of the world:

*"Oscelle mundi, Sidus Itali cœli,  
Flos Urbium, flos cornicuumq' amœnum,  
Quot sunt, eruntque, quot fuere, Verona."*

The next morning we traveled over the downs where Marius fought and fancied ourselves about Winchester, and the country toward Dorsetshire. We dined at an inn called Cavalli Caschieri, near Peschiera, a very strong fort of the Venetian Republic, and near the Lago di Garda, which disembogues into that of Mantua, near forty miles in length, highly spoken of by my Lord Arundel to me, as the most pleasant spot in Italy, for which reason I observed it with the more diligence, alighting out of the coach, and going up to a grove of cypresses growing about a gentleman's country-house, from whence indeed it presents a most surprising prospect. The hills and gentle risings about it produce oranges, citrons, olives, figs, and other tempting fruits, and the waters abound in excellent fish, especially trouts. In the middle of this lake stands Sermonea, on an island; here Captain Wray bought a pretty nag of the master of our inn where we dined, for eight pistoles, which his wife, our hostess, was so unwilling to part with, that she did nothing but kiss and weep and hang about the horse's neck, till the captain rode away.

We came this evening to Brescia, which next morning we traversed, according to our custom, in search of antiquities and new sights. Here, I purchased of old Lazarino Cominazzo my fine carbine, which cost me nine pistoles, this city being famous for these firearms, and that workman, Jo. Bap. Franco, the best esteemed. The city consists most in artists, every shop abounding in guns, swords, armorers, etc. Most of the workmen come out of Germany. It stands in a fertile plain, yet the castle is built on a hill. The streets abound in fair fountains. The Torre della Pallada is of a noble Tuscan order, and the Senate house is inferior to few. The piazza is but indifferent; some of the houses arched as at Padua. The Cathedral was under repair. We would from hence have visited Parma, Piacenza, Mantua, etc.; but the banditti and other dangerous parties being abroad, committing many enormities, we were contented with a Pisgah sight of them.

We dined next day, at Ursa Vecchia, and, after din-

ner, passed by an exceeding strong fort of the Venetians, called Ursa Nova, on their frontier. Then by the river Oglio, and so by Sonano, where we enter the Spanish dominions, and that night arrived at Crema, which belongs to Venice, and is well defended. The Podesta's Palace is finely built, and so is the Duomo, or Cathedral, and the tower to it, with an ample piazza.

Early next day, after four miles' riding, we entered into the State of Milan, and passed by Lodi, a great city famous for cheese, little short of the best Parmeggiano. We dined at Marignano, ten miles before coming to Milan, where we met half a dozen suspicious cavaliers, who yet did us no harm. Then, passing as through a continual garden, we went on with exceeding pleasure; for it is the Paradise of Lombardy, the highways as even and straight as a line, the fields to a vast extent planted with fruit about the inclosures, vines to every tree at equal distances, and watered with frequent streams. There was likewise much corn, and olives in abundance. At approach of the city, some of our company, in dread of the Inquisition (severer here than in all Spain), thought of throwing away some Protestant books and papers. We arrived about three in the afternoon, when the officers searched us thoroughly for prohibited goods; but, finding we were only gentlemen travelers, dismissed us for a small reward, and we went quietly to our inn, the THREE KINGS, where, for that day, we refreshed ourselves, as we had need. The next morning, we delivered our letters of recommendation to the learned and courteous Ferrarius, a Doctor of the Ambrosian College, who conducted us to all the remarkable places of the town, the first of which was the famous Cathedral. We entered by a portico, so little inferior to that of Rome that, when it is finished, it will be hard to say which is the fairest; the materials are all of white and black marble, with columns of great height, of Egyptian granite. The outside of the church is so full of sculpture, that you may number 4,000 statues, all of white marble, among which that of St. Bartholomew is esteemed a masterpiece. The church is very spacious, almost as long as St. Peter's at Rome, but not so large. About the choir, the sacred Story is finely sculptured, in snow-white marble, nor know I where it is exceeded. About the body of the church

are the miracles of St. Charles Borromeo, and in the vault beneath is his body before the high altar, grated, and inclosed, in one of the largest crystals in Europe. To this also belongs a rich treasure. The cupola is all of marble within and without, and even covered with great planks of marble, in the Gothic design. The windows are most beautifully painted. Here are two very fair and excellent organs. The fabric is erected in the midst of a fair piazza, and in the center of the city.

Hence, we went to the Palace of the Archbishop, which is a quadrangle, the architecture of Theobaldi, who designed much for Philip II. in the Escorial, and has built much in Milan. Hence, into the Governor's Palace, who was Constable of Castile. Tempted by the glorious tapestries and pictures, I adventured so far alone, that peeping into a chamber where the great man was under the barber's hands, he sent one of his negroes (a slave) to know what I was. I made the best excuse I could, and that I was only admiring the pictures, which he returning and telling his lord, I heard the Governor reply that I was a spy; on which I retired with all the speed I could, passed the guard of Swiss, got into the street, and in a moment to my company, who were gone to the Jesuits' Church, which in truth is a noble structure, the front especially, after the modern. After dinner, we were conducted to St. Celso, a church of rare architecture, built by Bramante; the carvings of the marble *facciata* are, by Annibal Fontana, whom they esteem at Milan equal to the best of the ancients. In a room joining to the church, is a marble Madonna, like a Colosse, of the same sculptor's work, which they will not expose to the air. There are two *sacristias*, in one of which is a fine Virgin, of Leonardo da Vinci; in the other is one of Raphael d'Urbino, a piece which all the world admires. The Sacristan showed us a world of rich plate, jewels, and embroidered copes, which are kept in presses.

Next, we went to see the Great Hospital, a quadrangular cloister of a vast compass, a truly royal fabric, with an annual endowment of 50,000 crowns of gold. There is in the middle of it a cross building for the sick, and, just under it, an altar so placed as to be seen in all places of the Infirmary.

There are divers colleges built in this quarter, richly provided for by the same Borromeo and his nephew, the last Cardinal Frederico, some not yet finished, but of excellent design.

In St. Eustorgio, they tell us, formerly lay the bodies of the three Magi, since translated to Cologne in Germany; they, however, preserve the tomb, which is a square stone, on which is engraven a star, and, under it, "*Sepulchrum trium Magorum.*"

Passing by St. Laurence, we saw sixteen columns of marble, and the ruins of a Temple of Hercules, with this inscription yet standing:

*"Imp. Casari L. Aurelio Vero Aug. Arminiaco Medio Parthico Maxi Tribi Poti VII. Impi IIII. Cos. III. P. P. Divi Antonini Pij Divi Hadriani Nepoti Divi Trajani Parthici Pro-Nepoti Divi Nervae Abnepoti Dec. Dec."*

We concluded this day's wandering at the Monastery of Madonna delle Grazie, and in the refectory admired that celebrated *Cæna Domini* of Leonardo da Vinci, which takes up the entire wall at the end, and is the same that the great virtuoso, Francis I., of France, was so enamored of, that he consulted to remove the whole wall by binding it about with ribs of iron and timber, to convey it into France. It is indeed one of the rarest paintings that was ever executed by Leonardo, who was long in the service of that Prince, and so dear to him that the King, coming to visit him in his old age and sickness, he expired in his arms. But this incomparable piece is now exceedingly impaired.

Early next morning came the learned Dr. Ferrarius to visit us, and took us in his coach to see the Ambrosian Library, where Cardinal Fred Borromeo has expended so vast a sum on this building, and in furnishing with curiosities, especially paintings and drawings of inestimable value among painters. It is a school fit to make the ablest artists. There are many rare things of Hans Breugel, and among them the Four Elements. In this room, stands the glorious [boasting] inscription of Cavaliero Galeazzo Arconati, valuing his gift to the library of several drawings by Da Vinci; but these we could not see, the keeper of them being out of town, and he always carrying the keys with him; but my Lord Marshal, who had seen them, told me all but one book are small, that

a huge folio contained 400 leaves full of scratches of Indians, etc. But whereas the inscription pretends that our King Charles had offered £1,000 for them,—the truth is, and my Lord himself told me, that it was he who treated with Galeazzo for himself, in the name and by permission of the King, and that the Duke of Ferra, who was then Governor, should make the bargain; but my Lord, having seen them since, did not think them of so much worth.

In the great room, where is a goodly library, on the right hand of the door, is a small wainscot closet, furnished with rare manuscripts. Two original letters of the Grand Signor were shown us, sent to two Popes, one of which was (as I remember) to Alexander VI. [Borgia], and the other mentioning the head of the lance which pierced our Blessed Savior's side, as a present to the Pope: I would feign have gotten a copy of them, but could not; I hear, however, that they are since translated into Italian, and that therein is a most honorable mention of Christ.

We revisited St. Ambrose's church. The high altar is supported by four porphyry columns, and under it lie the remains of that holy man. Near it they showed us a pit, or well (an obscure place it is), where they say St. Ambrose baptized St. Augustine, and recited the *Te Deum*; for so imports the inscription. The place is also famous for some Councils that have been held here, and for the coronation of divers Italian Kings and Emperors, receiving the iron crown from the Archbishop of this sec.\* They show the History by Josephus, written on the bark of trees. The high altar is wonderfully rich.

Milan is one of the most princely cities in Europe; it has no suburbs, but is circled with a stately wall for ten miles, in the center of a country that seems to flow with milk and honey. The air is excellent; the fields fruitful to admiration, the market abounding with all sorts of provisions. In the city are near 100 churches, 71 monasteries, and 40,000 inhabitants; it is of a circular figure, fortified with bastions, full of sumptuous palaces and rare artists, especially for works in crystal, which is here cheap, being found among the Alps. They have curious straw-work among the nuns, even to admiration. It has a good river, and a citadel at some small distance from the city,

\* Bonaparte afterward took it, and placed it on his own head.

commanding it, of great strength for its works and munitions of all kinds. It was built by Galeatius II., and consists of four bastions, and works at the angles and fronts; the graff is faced with brick to a very great depth; has two strong towers as one enters, and within is another fort, and spacious lodgings for the soldiers, and for exercising them. No accommodation for strength is wanting, and all exactly uniform. They have here also all sorts of work and tradesmen, a great magazine of arms and provisions. The fosse is of spring water, with a mill for grinding corn, and the ramparts vaulted underneath. Don Juan Vasques Coronada was now Governor; the garrison Spaniards only.

There is nothing better worth seeing than the collection of Signor Septalla, a canon of St. Ambrose, famous over Christendom for his learning and virtues. Among other things, he showed us an Indian wood, that has the perfect scent of civet; a flint, or pebble, that has a quantity of water in it, which is plainly to be seen, it being clear as agate; divers crystals that have water moving in them, some of them having plants, leaves, and hog's bristles in them; much amber full of insects, and divers things of woven amianthus.

Milan is a sweet place, and though the streets are narrow, they abound in rich coaches, and are full of noblesse, who frequent the course every night. Walking a turn in the portico before the dome, a cavaliero who passed by, hearing some of us speaking English, looked a good while earnestly on us, and by and by sending his servant, desiring we would honor him the next day at dinner. We looked on this as an odd invitation, he not speaking to us himself, but we returned his civility with thanks, though not fully resolved what to do, or indeed what might be the meaning of it in this jealous place; but on inquiry, it was told us he was a Scots Colonel, who had an honorable command in the city, so that we agreed to go. This afternoon, we were wholly taken up in seeing an opera represented by some Neapolitans, performed all in excellent music with rare scenes, in which there acted a celebrated beauty.

Next morning, we went to the Colonel's, who had sent his servant again to conduct us to his house, which we found to be a noble palace, richly furnished. There were

other guests, all soldiers, one of them a Scotchman, but we could not learn one of their names. At dinner, he excused his rudeness that he had not himself spoken to us; telling us it was his custom, when he heard of any English travelers (who but rarely would be known to pass through that city for fear of the Inquisition), to invite them to his house, where they might be free. We had a sumptuous dinner; and the wine was so tempting, that after some healths had gone about, and we had risen from the table, the Colonel led us into his hall, where there hung up divers colors, saddles, bridles, pistols, and other arms, being trophies which he had taken with his own hands from the enemy; among them, he would needs bestow a pair of pistols on Captain Wray, one of our fellow-travelers, and a good drinking gentleman, and on me a Turkish bridle woven with silk and very curiously embossed, with other silk trappings, to which hung a half moon finely wrought, which he had taken from a bashaw whom he had slain. With this glorious spoil, I rode the rest of my journey as far as Paris, and brought it afterward into England. He then showed us a stable of brave horses, with his menage and cavalierizzo. Some of the horses he caused to be brought out, which he mounted, and performed all the motions of an excellent horseman. When this was done, and he had alighted,—contrary to the advice of his groom and page, who knew the nature of the beast, and that their master was a little spirited with wine, he would have a fiery horse that had not yet been managed and was very ungovernable, but was otherwise a very beautiful creature; this he mounting, the horse, getting the reins in a full *carriere*, rose so desperately that he fell quite back, crushing the Colonel so forcibly against the wall of the menage, that though he sat on him like a Centaur, yet recovering the jade on all fours again, he desired to be taken down and so led in, where he cast himself on a pallet; and, with infinite lamentations, after some time we took leave of him, being now speechless. The next morning, going to visit him, we found before the door the canopy which they usually carry over the host, and some with lighted tapers; which made us suspect he was in a very sad condition, and so indeed we found him, an Irish Friar standing by his bedside as confessing him, or at least disguising a con-

fession, and other ceremonies used *in extremis*; for we afterward learned that the gentleman was a Protestant, and had this Friar, his confidant; which was a dangerous thing at Milan, had it been but suspected. At our entrance, he sighed grievously, and held up his hands, but was not able to speak. After vomiting some blood, he kindly took us all by the hand, and made signs that he should see us no more, which made us take our leave of him with extreme reluctancy and affliction for the accident. This sad disaster made us consult about our departure as soon as we could, not knowing how we might be inquired after, or engaged, the Inquisition being so cruelly formidable and inevitable, on the least suspicion. The next morning, therefore, discharging our lodgings, we agreed for a coach to carry us to the foot of the Alps, not a little concerned for the death of the Colonel, which we now heard of, and who had so courteously entertained us.

The first day we got as far as Castellanza, by which runs a considerable river into Lago Maggiore; here, at dinner, were two or three Jesuits, who were very pragmatical and inquisitive, whom we declined conversation with as decently as we could; so we pursued our journey through a most fruitful plain, but the weather was wet and uncomfortable. At night, we lay at Sesto.

The next morning, leaving our coach, we embarked in a boat to carry us over the lake (being one of the largest in Europe), and whence we could see the towering Alps, and among them the great San Bernardo, esteemed the highest mountain in Europe, appearing to be some miles above the clouds. Through this vast water, passes the river Ticinus, which discharges itself into the Po, by which means Helvetia transports her merchandizes into Italy, which we now begin to leave behind us.

Having now sailed about two leagues, we were hauled ashore at Arona, a strong town belonging to the Duchy of Milan, where, being examined by the Governor, and paying a small duty, we were dismissed. Opposite to this fort, is Angiera, another small town, the passage very pleasant with the prospect of the Alps covered with pine and fir trees, and above them snow. We passed the pretty island Isabella, about the middle of

the lake, on which is a fair house built on a mount; indeed, the whole island is a mount ascended by several terraces and walks all set above with orange and citron trees.

The next we saw was Isola, and we left on our right hand the Isle of St. Jovanni; and so sailing by another small town built also on an island, we arrived at night at Margazzo, an obscure village at the end of the lake, and at the very foot of the Alps, which now rise as it were suddenly after some hundreds of miles of the most even country in the world, and where there is hardly a stone to be found, as if Nature had here swept up the rubbish of the earth in the Alps, to form and clear the plains of Lombardy, which we had hitherto passed since our coming from Venice. In this wretched place, I lay on a bed stuffed with leaves, which made such a crackling and did so prick my skin through the tick, that I could not sleep. The next morning, I was furnished with an ass, for we could not get horses; instead of stirrups, we had ropes tied with a loop to put our feet in, which supplied the place of other trappings. Thus, with my gallant steed, bridled with my Turkish present, we passed through a reasonably pleasant but very narrow valley, till we came to Duomo, where we rested, and, having showed the Spanish pass, the Governor would press another on us, that his secretary might get a crown. Here we exchanged our asses for mules, sure-footed on the hills and precipices, being accustomed to pass them. Hiring a guide, we were brought that night through very steep, craggy, and dangerous passages to a village called Vedra, being the last of the King of Spain's dominions in the Duchy of Milan. We had a very infamous wretched lodging.

The next morning we mounted again through strange, horrid, and fearful crags and tracts, abounding in pine trees, and only inhabited by bears, wolves, and wild goats; nor could we anywhere see above a pistol shot before us, the horizon being terminated with rocks and mountains, whose tops, covered with snow, seemed to touch the skies, and in many places pierced the clouds. Some of these vast mountains were but one entire stone, between whose clefts now and then precipitated great cataracts of melted snow, and other waters, which made

a terrible roaring, echoing from the rocks and cavities; and these waters in some places breaking in the fall, wet us as if we had passed through a mist, so as we could neither see nor hear one another, but, trusting to our honest mules, we jogged on our way. The narrow bridges, in some places made only by felling huge fir trees, and laying them athwart from mountain to mountain, over cataracts of stupendous depth, are very dangerous, and so are the passages and edges made by cutting away the main rock; others in steps; and in some places we pass between mountains that have been broken and fallen on one another; which is very terrible, and one had need of a sure foot and steady head to climb some of these precipices, besides that they are harbors for bears and wolves, who have sometimes assaulted travelers. In these straits, we frequently alighted, now freezing in the snow, and anon frying by the reverberation of the sun against the cliffs as we descend lower, when we meet now and then a few miserable cottages so built upon the declining of the rocks, as one would expect their sliding down. Among these, inhabit a goodly sort of people, having monstrous gullets, or wens of flesh, growing to their throats, some of which I have seen as big as an hundred pound bag of silver hanging under their chins; among the women especially, and that so ponderous, as that to ease them, many wear linen cloth bound about their head, and coming under the chin to support it; but *quis tumidum guttur miratur in Alpibus?* Their drinking so much snow water is thought to be the cause of it; the men using more wine, are not so strumous as the women. The truth is, they are a peculiar race of people, and many great water drinkers here have not these prodigious tumors; it runs, as we say, in the blood, and is a vice in the race, and renders them so ugly, shriveled and deformed, by its drawing the skin of the face down, that nothing can be more frightful; to this add a strange puffing dress, furs, and that barbarous language, being a mixture of corrupt High German, French, and Italian. The people are of great stature, extremely fierce and rude, yet very honest and trusty.

This night, through almost inaccessible heights, we came in prospect of Mons Sempronius, now Mount Sampion, which has on its summit a few huts and a chapel.

Approaching this, Captain Wray's water spaniel (a huge filthy cur that had followed him out of England) hunted a herd of goats down the rocks into a river made by the melting of the snow. Arrived at our cold harbor (though the house had a stove in every room) and supping on cheese and milk with wretched wine, we went to bed in cupboards so high from the floor, that we climbed them by a ladder; we were covered with feathers, that is, we lay between two ticks stuffed with them, and all little enough to keep one warm. The ceilings of the rooms are strangely low for those tall people. The house was now (in September) half covered with snow, nor is there a tree, or a bush, growing within many miles.

From this uncomfortable place, we prepared to hasten away the next morning; but, as we were getting on our mules, comes a huge young fellow demanding money for a goat which he affirmed that Captain Wray's dog had killed; expostulating the matter, and impatient of staying in the cold, we set spurs and endeavored to ride away, when a multitude of people being by this time gotten together about us (for it being Sunday morning and attending for the priest to say mass), they stopped our mules, beat us off our saddles, and, disarming us of our carbines, drew us into one of the rooms of our lodging, and set a guard upon us. Thus we continued prisoners till mass was ended, and then came half a score grim Swiss, who, taking on them to be magistrates, sat down on the table, and condemned us to pay a pistole for the goat, and ten more for attempting to ride away, threatening that if we did not pay it speedily, they would send us to prison, and keep us to a day of public justice, where, as they perhaps would have exaggerated the crime, for they pretended we had primed our carbines and would have shot some of them (as indeed the Captain was about to do), we might have had our heads cut off, as we were told afterward, for that among these rude people a very small misdemeanor does often meet that sentence. Though the proceedings appeared highly unjust, on consultation among ourselves we thought it safer to rid ourselves out of their hands, and the trouble we were brought into; and therefore we patiently laid down the money, and with fierce countenances had our mules and arms delivered to us, and glad we were to escape as we did.

This was cold entertainment, but our journey after was colder, the rest of the way having been (as they told us) covered with snow since the Creation; no man remembered it to be without; and because, by the frequent snowing, the tracks are continually filled up, we passed by several tall masts set up to guide travelers, so as for many miles they stand in ken of one another, like to our beacons. In some places, where there is a cleft between two mountains, the snow fills it up, while the bottom, being thawed, leaves as it were a frozen arch of snow, and that so hard as to bear the greatest weight; for as it snows often, so it perpetually freezes, of which I was so sensible that it flawed the very skin of my face.

Beginning now to descend a little, Captain Wray's horse (that was our sumpter and carried all our baggage) plunging through a bank of loose snow, slid down a frightful precipice, which so incensed the choleric cavalier, his master, that he was sending a brace of bullets into the poor beast, lest our guide should recover him, and run away with his burden; but, just as he was lifting up his carbine, we gave such a shout, and so pelted the horse with snow-balls, as with all his might plunging through the snow, he fell from another steep place into another bottom, near a path we were to pass. It was yet a good while ere we got to him, but at last we recovered the place, and, easing him of his charge, hauled him out of the snow, where he had been certainly frozen in, if we had not prevented it, before night. It was as we judged almost two miles that he had slid and fallen, yet without any other harm than the benumbing of his limbs for the present, but, with lusty rubbing and chafing he began to move, and, after a little walking, performed his journey well enough. All this way, affrighted with the disaster of this horse, we trudged on foot, driving our mules before us; sometimes we fell, sometimes we slid, through this ocean of snow, which after October is impassible. Toward night, we came into a larger way, through vast woods of pines, which clothe the middle parts of these rocks. Here, they were burning some to make pitch and rosin, peeling the knotty branches, as we do to make charcoal, reserving what melts from them, which hardens into pitch. We passed several cascades of dissolved snow, that had made channels of formidable depth in the

crevices of the mountains, and with such a fearful roaring as we could hear it for seven long miles. It is from these sources that the Rhone and the Rhine, which pass through all France and Germany, derive their originals. Late at night, we got to a town called Briga, at the foot of the Alps, in the Valteline. Almost every door had nailed on the outside and next the street a bear's, wolf's, or fox's head, and divers of them, all three; a savage kind of sight, but, as the Alps are full of the beasts, the people often kill them. The next morning, we returned to our guide, and took fresh mules, and another to conduct us to the Lake of Geneva, passing through as pleasant a country as that we had just traveled was melancholy and troublesome. A strange and sudden change it seemed; for the reverberation of the sunbeams from the mountains and rocks that like walls range it on both sides, not above two flight-shots in breadth, for a very great number of miles, renders the passage excessively hot. Through such extremes we continued our journey, that goodly river, the Rhone, gliding by us in a narrow and quiet channel almost in the middle of this Canton, fertilizing the country for grass and corn, which grow here in abundance.

We arrived this night at Sion, a pretty town and city, a bishop's seat, and the head of Valcsia. There is a castle, and the bishop who resides in it, has both civil and ecclesiastical jurisdiction. Our host, as the custom of these Cantons is, was one of the chiefest of the town, and had been a Colonel in France: he treated us with extreme civility, and was so displeased at the usage we received at Mount Sampion, that he would needs give us a letter to the Governor of the country, who resided at St. Maurice, which was in our way to Geneva, to revenge the affront. This was a true old blade, and had been a very curious virtuoso, as we found by a handsome collection of books, medals, pictures, shells, and other antiquities. He showed two heads and horns of the true capricorn, which animal he told us was frequently killed among the mountains; one branch of them was as much as I could well lift, and near as high as my head, not much unlike the greater sort of goat's, save that they bent forward, by help whereof they climb up and hang on inaccessible rocks, from whence the

inhabitants now and then shoot them. They speak prodigious things of their leaping from crag to crag, and of their sure footing, notwithstanding their being cloven-footed, unapt (one would think) to take hold and walk so steadily on those horrible ridges as they do. The Colonel would have given me one of these beams, but the want of a convenience to carry it along with me, caused me to refuse his courtesy. He told me that in the castle there were some Roman and Christian antiquities, and he had some inscriptions in his own garden. He invited us to his country-house, where he said he had better pictures, and other rarities; but, our time being short, I could not persuade my companions to stay and visit the places he would have had us see, nor the offer he made to show us the hunting of the bear, wolf, and other wild beasts. The next morning, having presented his daughter, a pretty well-fashioned young woman, with a small ruby ring, we parted somewhat late from our generous host.

Passing through the same pleasant valley between the horrid mountains on either hand, like a gallery many miles in length, we got to Martigni, where also we were well entertained. The houses in this country are all built of fir boards, planed within, low, and seldom above one story. The people very clownish and rustically clad, after a very odd fashion, for the most part in blue cloth, very whole and warm, with little variety of distinction between the gentleman and common sort, by a law of their country being exceedingly frugal. Add to this their great honesty and fidelity, though exacting enough for what they part with: I saw not one beggar. We paid the value of twenty shillings English, for a day's hire of one horse. Every man goes with a sword by his side, the whole country well disciplined, and indeed impregnable, which made the Romans have such ill success against them; one lusty Swiss at their narrow passages is sufficient to repel a legion. It is a frequent thing here for a young tradesman, or farmer, to leave his wife and children for twelve or fifteen years, and seek his fortune in the wars in Spain, France, Italy, or Germany, and then return again to work. I look upon this country to be the safest spot of all Europe, neither envied nor envying; nor are any of them rich,

nor poor; they live in great simplicity and tranquillity and, though of the fourteen Cantons half be Roman Catholics, the rest reformed, yet they mutually agree and are confederate with Geneva, and are its only security against its potent neighbors, as they themselves are from being attacked by the greater potentates, by the mutual jealousy of their neighbors, as either of them would be overbalanced, should the Swiss, who are wholly mercenary and auxiliaries, be subjected to France or Spain.

We were now arrived at St. Maurice, a large handsome town and residence of the President, where justice is done. To him we presented our letter from Sion, and made known the ill usage we had received for killing a wretched goat, which so incensed him, that he swore if we would stay he would not only help us to recover our money again, but most severely punish the whole rabble; but our desire of revenge had by this time subsided, and glad we were to be gotten so near France, which we reckoned as good as home. He courteously invited us to dine with him; but we excused ourselves, and, returning to our inn, while we were eating something before we took horse, the Governor had caused two pages to bring us a present of two great vessels of covered plate full of excellent wine, in which we drank his health, and rewarded the youths; they were two vast bowls supported by two Swiss, handsomely wrought after the German manner. This civility and that of our host at Sion, perfectly reconciled us to the highlanders; and so, proceeding on our journey we passed this afternoon through the gate which divides the Valais from the Duchy of Savoy, into which we were now entering, and so, through Montei, we arrived that evening at Beveretta. Being extremely weary and complaining of my head, and finding little accommodation in the house, I caused one of our hostess's daughters to be removed out of her bed and went immediately into it while it was yet warm, being so heavy with pain and drowsiness that I would not stay to have the sheets changed; but I shortly after paid dearly for my impatience, falling sick of the smallpox as soon as I came to Geneva, for by the smell of frankincense and the tale the good woman told me of her daughter having had an ague, I afterward concluded she had been newly recovered of the

smallpox. Notwithstanding this, I went with my company, the next day, hiring a bark to carry us over the lake; and indeed, sick as I was, the weather was so serene and bright, the water so calm, and air so temperate, that never had travelers a sweeter passage. Thus, we sailed the whole length of the lake, about thirty miles, the countries bordering on it (Savoy and Berne) affording one of the most delightful prospects in the world, the Alps covered with snow, though at a great distance, yet showing their aspiring tops. Through this lake, the river Rhodanus passes with that velocity as not to mingle with its exceeding deep waters, which are very clear, and breed the most celebrated trout for largeness and goodness of any in Europe. I have ordinarily seen one of three feet in length sold in the market for a small price, and such we had in the lodging where we abode, which was at the White Cross. All this while, I held up tolerably; and the next morning having a letter for Signor John Diodati, the famous Italian minister and translator of the Holy Bible into that language, I went to his house, and had a great deal of discourse with that learned person. He told me he had been in England, driven by tempest into Deal, while sailing for Holland, that he had seen London, and was exceedingly taken with the civilities he received. He so much approved of our Church-government by Bishops, that he told me the French Protestants would make no scruple to submit to it and all its pomp, had they a king of the Reformed religion as we had. He exceedingly deplored the difference now between his Majesty and the Parliament. After dinner, came one Monsieur Saladine, with his little pupil, the Earl of Caernarvon, to visit us, offering to carry us to the principal places of the town; but, being now no more able to hold up my head, I was constrained to keep my chamber, imagining that my very eyes would have dropped out; and this night I felt such a stinging about me, that I could not sleep. In the morning, I was very ill, but sending for a doctor, he persuaded me to be bled. He was a very learned old man, and, as he said, he had been physician to Gustavus the Great, King of Sweden, when he passed this way into Italy, under the name of Monsieur Gars, the initial letters of Gustavus Adolphus Rex Sueciæ, and of our famous Duke of Buckingham, on his returning out of Italy. He afterward

acknowledged that he should not have bled me, had he suspected the smallpox, which broke out a day after. He afterward purged me, and applied leeches, and God knows what this would have produced, if the spots had not appeared, for he was thinking of bleeding me again. They now kept me warm in bed for sixteen days, tended by a vigilant Swiss matron, whose monstrous throat, when I sometimes awakened out of unquiet slumbers, would affright me. After the pimples were come forth, which were not many, I had much ease as to pain, but infinitely afflicted with heat and noisomeness. By God's mercy, after five weeks' keeping my chamber, I went abroad. Monsieur Saladine and his lady sent me many refreshments. Monsieur Le Chat, my physician, to excuse his letting me bleed, told me it was so burnt and vicious as it would have proved the plague, or spotted fever, had he proceeded by any other method. On my recovering sufficiently to go abroad, I dined at Monsieur Saladine's, and in the afternoon went across the water on the side of the lake, and took a lodging that stood exceedingly pleasant, about half a mile from the city for the better airing; but I stayed only one night, having no company there, save my pipe; so, the next day, I caused them to row me about the lake as far as the great stone, which they call NEPTUNE'S Rock, on which they say sacrifice was anciently offered to him. Thence, I landed at certain cherry gardens and pretty villas by the side of the lake, and exceedingly pleasant. Returning, I visited their conservatories of fish; in which were trouts of six and seven feet long, AS THEY AFFIRMED.

The Rhone, which parts the city in the midst dips into a cavern underground, about six miles from it, and afterward rises again, and runs its open course, like our Mole, or Swallow, by Dorking, in Surrey. The next morning (being Thursday) I heard Dr. Diodati preach in Italian, many of that country, especially of Lucca, his native place, being inhabitants of Geneva, and of the Reformed religion.

The town lying between Germany, France, and Italy, those three tongues are familiarly spoken by the inhabitants. It is a strong, well-fortified city, part of it built on a rising ground. The houses are not despicable, but the high pent-houses (for I can hardly call them clois-

ters, being all of wood), through which the people pass dry and in the shade, winter and summer, exceedingly deform the fronts of the buildings. Here are abundance of booksellers; but their books are of ill impressions; these, with watches (of which store are made here), crystal, and excellent screwed guns, are the staple commodities. All provisions are good and cheap.

The town-house is fairly built of stone; the portico has four black marble columns; and, on a table of the same, under the city arms, a demi-eagle and cross, between cross-keys, is a motto, "POST TENEBRAS LUX," and this inscription:

*Quum anno 1535 profligata Romand Anti-Christi Tyrannide, abrogatisq; ejus superstitionibus, sacro-sancta Christi Religio hinc in suam puritatem, Ecclesia in meliorem ordinem singulari Dei beneficio reposita, et simul pulsus fugatisq; hostibus, urbs ipsa in suam libertatem, non sine insigni miraculo, restituta fuerit; Senatus Populusq; Genevensis Monumentum hoc perpetuæ memoriæ causâ fieri atque hoc loco erigi curavit, quod suam erga Deum gratitudinem ad posteros testatum fuerit.*

The territories about the town are not so large as many ordinary gentlemen have about their country farms, for which cause they are in continual watch, especially on the Savoy side; but, in case of any siege the Swiss are at hand, as this inscription in the same place shows, toward the street:

D.O.M.S.

*Anno a verâ Religione divinitus cum veteri Libertate Genevæ restituta, et quasi novo Jubilæo ineunte, plurimis vitæ domi et forsi insidiis et superatis tempestatibus, et cum Helvetiorum Primari Tigurini æquo jure in societatem perpetuam nobiscum venerint, et veteres fidissimi socii Bernenses prius vinculum novo adstrinxerint, S.P.Q.G. quod felix esse velit D.O.M. tanti, beneficii monumentum consecrârunt, anno temporis ultimi MDCCXXXIV.*

In the Senate-house, were fourteen ancient urns, dug up as they were removing earth in the fortifications.

A little out of the town is a spacious field, which they call Campus Martius; and well it may be so termed, with better reason, than that at Rome at present (which is no more a field, but all built into streets), for here on every Sunday, after the evening devotions, this precise people permit their youth to exercise arms, and shoot in guns, and in the long and cross bows, in which they are

exceedingly expert, reputed to be as dexterous as any people in the world. To encourage this, they yearly elect him who has won most prizes at the mark, to be their king, as the king of the long-bow, gun, or cross-bow. He then wears that weapon in his hat in gold, with a crown over it made fast to the hat like a brooch. In this field, is a long house wherein their arms and furniture are kept in several places very neatly. To this joins a hall, where, at certain times, they meet and feast; in the glass windows are the arms and names of their kings [of arms]. At the side of the field, is a very noble Pall-Mall, but it turns with an elbow. There is also a bowling-place, a tavern, and a trey-table, and here they ride their menaged horses. It is also the usual place of public execution of those who suffer for any capital crime, though committed in another country, by which law divers fugitives have been put to death, who have fled hither to escape punishment in their own country. Among other severe punishments here, adultery is death. Having seen this field, and played a game at mall, I supped with Mr. Saladine.

On Sunday, I heard Dr. Diodati preach in French, and after the French mode, in a gown with a cape, and his hat on. The Church Government is severely Presbyterian, after the discipline of Calvin and Beza, who set it up, but nothing so rigid as either our Scots or English sectaries of that denomination. In the afternoon, Monsieur Morice, a most learned young person and excellent poet, chief Professor of the University, preached at St. Peter's, a spacious Gothic fabric. This was heretofore a cathedral and a reverend pile. It has four turrets, on one of which stands a continual sentinel; in another cannons are mounted. The church is very decent within; nor have they at all defaced the painted windows, which are full of pictures of saints; nor the stalls, which are all carved with the history of our Blessed Savior.

In the afternoon, I went to see the young townsmen exercise in Mars' Field, where the prizes were pewter-plates and dishes; 'tis said that some have gained competent estates by what they have thus won. Here I first saw huge ballistæ, or cross-bows, shot in, being such as they formerly used in wars, before great guns were known; they were placed in frames, and had great screws

to bend them, doing execution at an incredible distance. They were most accurate at the long bow and musket, rarely missing the smallest mark. I was as busy with the carbine I brought from Brescia as any of them. After every shot, I found them go into a long house, and cleanse their guns, before they charged again.

On Monday, I was invited to a little garden without the works, where were many rare tulips, anemones, and other choice flowers. The Rhone, running athwart the town out of the Lake, makes half the city a suburb, which, in imitation of Paris, they call St. Germain's Faubourg, and it has a church of the same name. On two wooden bridges that cross the river are several water mills, and shops of trades, especially smiths and cutlers; between the bridges is an island, in the midst of which is a very ancient tower, said to have been built by Julius Cæsar. At the end of the other bridge is the mint, and a fair sun-dial.

Passing again by the town-house, I saw a large crocodile hanging in chains; and against the wall of one of the chambers, seven judges were painted without hands, except one in the middle, who has but one hand; I know not the story. The Arsenal is at the end of this building, well furnished and kept.

After dinner Mr. Morice led us to the college, a fair structure; in the lower part are the schools, which consist of nine classes; and a hall above, where the students assemble; also a good library. They showed us a very ancient Bible, of about 300 years old, in the vulgar French, and a MS. in the old Monkish character: here have the Professors their lodgings. I also went to the Hospital, which is very commodious; but the Bishop's Palace is now a prison.

This town is not much celebrated for beautiful women, for, even at this distance from the Alps, the gentlewomen have somewhat full throats; but our Captain Wray (afterward Sir William, eldest son of that Sir Christopher, who had both been in arms against his Majesty for the Parliament) fell so mightily in love with one of Monsieur Saladin's daughters that, with much persuasion, he could not be prevailed on to think on his journey into France, the season now coming on extremely hot.

My sickness and abode here cost me forty-five pistoles of

gold to my host, and five to my honest doctor, who for six weeks' attendance and the apothecary thought it so generous a reward that, at my taking leave, he presented me with his advice for the regimen of my health, written with his own hand in Latin. This regimen I much observed, and I bless God passed the journey without inconvenience from sickness, but it was an extraordinarily hot unpleasant season and journey, by reason of the craggy ways.

5th July, 1646. We took, or rather purchased, a boat, for it could not be brought back against the stream of the Rhone. We were two days going to Lyons, passing many admirable prospects of rocks and cliffs, and near the town down a very steep declivity of water for a full mile. From Lyons, we proceeded the next morning, taking horse to Roanne, and lay that night at Feurs. At Roanne we indulged ourselves with the best that all France affords, for here the provisions are choice and plentiful, so as the supper we had might have satisfied a prince. We lay in damask beds, and were treated like emperors. The town is one of the neatest built in all France, on the brink of the Loire; and here we agreed with an old fisher to row us as far as Orleans. The first night we came as far as Nevers, early enough to see the town, the Cathedral (St. Cyre), the Jesuits' College, and the Castle, a palace of the Duke's, with the bridge to it nobly built.

The next day we passed by La Charité, a pretty town, somewhat distant from the river. Here I lost my faithful spaniel Piccioli, who had followed me from Rome. It seems he had been taken up by some of the Governor's pages, or footmen, without recovery; which was a great displeasure to me, because the cur had many useful qualities.

The next day we arrived at Orleans, taking our turns to row, of which I reckon my share came to little less than twenty leagues. Sometimes, we footed it through pleasant fields and meadows; sometimes, we shot at fowls, and other birds; nothing came amiss: sometimes, we played at cards, while others sung, or were composing verses; for we had the great poet, Mr. Waller, in our company, and some other ingenious persons.

At Orleans we abode but one day; the next, leaving our mad Captain behind us, I arrived at Paris, rejoiced that, after so many disasters and accidents in a tedious

peregrination, I was gotten so near home, and here I resolved to rest myself before I went further.

It was now October, and the only time that in my whole life that I spent most idly, tempted from my more profitable recesses; but I soon recovered my better resolutions and fell to my study, learning the High Dutch and Spanish tongues, and now and then refreshing my dancing, and such exercises as I had long omitted, and which are not in much reputation among the sober Italians.

28th January, 1647. I changed my lodging in the Place de Monsieur de Metz, near the Abbey of St. Germain; and thence, on the 12th of February, to another in Rue Columbier, where I had a very fair apartment, which cost me four pistoles per month. The 18th, I frequented a course of Chemistry, the famous Monsieur Le Febvre operating upon most of the nobler processes. March 3d, Monsieur Mercure began to teach me on the lute, though to small perfection.

In May, I fell sick, and had very weak eyes; for which I was four times let bleed.

22d May, 1647. My valet (Herbert) robbed me of clothes and plate, to the value of three score pounds; but, through the diligence of Sir Richard Browne, his Majesty's Resident at the Court of France, and with whose lady and family I had contracted a great friendship (and particularly set my affections on a daughter), I recovered most of them, obtaining of the Judge, with no small difficulty, that the process against the thief should not concern his life, being his first offense.

10th June, 1647. We concluded about my marriage, in order to which I went to St. Germain, where his Majesty, then Prince of Wales, had his court, to desire of Dr. Earle, then one of his chaplains (since Dean of Westminster, Clerk of the Closet, and Bishop of Salisbury), that he would accompany me to Paris, which he did; and, on Thursday, 27th of June, 1647, he married us in Sir Richard Browne's chapel, between the hours of eleven and twelve, some few select friends being present. And this being Corpus Christi feast, was solemnly observed in this country; the streets were sumptuously hung with tapestry, and strewed with flowers.

10th September, 1647. Being called into England, to settle my affairs after an absence of four years, I took

leave of the Prince and Queen, leaving my wife, yet very young, under the care of an excellent lady and prudent mother.

4th October, 1647. I sealed and declared my will, and that morning went from Paris, taking my journey through Rouen, Dieppe, Ville-dieu, and St. Vallerie, where I stayed one day with Mr. Waller, with whom I had some affairs, and for which cause I took this circle to Calais, where I arrived on the 11th, and that night embarking in a packet boat, was by one o'clock got safe to Dover; for which I heartily put up my thanks to God who had conducted me safe to my own country, and been merciful to me through so many aberrations. Hence, taking post, I arrived at London the next day at evening, being the 2d of October, new style.

5th October, 1647. I came to Wotton, the place of my birth, to my brother, and on the 10th to Hampton Court where I had the honor to kiss his Majesty's hand, and give him an account of several things I had in charge, he being now in the power of those execrable villains who not long after murdered him. I lay at my cousin, Sergeant Hatton's at Thames Ditton, whence, on the 13th, I went to London.

14th October, 1647. To Sayes Court, at Deptford, in Kent (since my house), where I found Mr. Pretymann, my wife's uncle, who had charge of it and the estate about it, during my father-in-law's residence in France. On the 15th, I again occupied my own chambers in the Middle Temple.

9th November, 1647. My sister opened to me her marriage with Mr. Glanville.

14th January, 1647-48. From London I went to Wotton to see my young nephew; and thence to Baynards [in Ewhurst], to visit my brother Richard.

5th February, 1648. Saw a tragi-comedy acted in the cockpit, after there had been none of these diversions for many years during the war.

28th February, 1648. I went with my noble friend, Sir William Duce (afterward Lord Downe), to Thistleworth, where we dined with Sir Clepesby Crew, and afterward to see the rare miniatures of Peter Oliver, and rounds of plaster, and then the curious flowers of Mr. Barill's garden, who has some good medals and pictures.

Sir Clepesby has fine Indian hangings, and a very good chimney-piece of water colors, by Breughel, which I bought for him.

26th April, 1648. There was a great uproar in London, that the rebel army quartering at Whitehall, would plunder the City, on which there was published a Proclamation for all to stand on their guard.

4th May, 1648. Came up the Essex petitioners for an agreement between his Majesty and the rebels. The 16th, the Surrey men addressed the Parliament for the same; of which some of them were slain and murdered by Cromwell's guards, in the new palace yard. I now sold the impropriation of South Malling, near Lewes, in Sussex, to Messrs. Kemp and Alcock, for £3,000.

30th May, 1648. There was a rising now in Kent, my Lord of Norwich being at the head of them. Their first rendezvous was in Broome-field, next my house at Sayes Court, whence they went to Maidstone, and so to Colchester, where was that memorable siege.

27th June, 1648. I purchased the manor of Hurcott, in Worcestershire, of my brother George, for £3,300.

1st July, 1648. I sate for my picture, in which there is a Death's head, to Mr. Walker, that excellent painter.

10th July, 1648. News was brought me of my Lord Francis Villiers being slain by the rebels near Kingston.

16th August 1648. I went to Woodcote (in Epsom) to the wedding of my brother, Richard, who married the daughter and coheir of Esquire Minn, lately deceased; by which he had a great estate both in land and money on the death of a brother. The coach in which the bride and bridegroom were, was overturned in coming home; but no harm was done.

28th August, 1648. To London from Sayes Court, and saw the celebrated follices of Bartholomew Fair.

16th September, 1648. Came my lately married brother, Richard, and his wife, to visit me, when I showed them Greenwich, and her Majesty's Palace, now possessed by the rebels.

28th September, 1648. I went to Albury, to visit the Countess of Arundel, and returned to Wolton.

31st October, 1648. I went to see my manor of Preston Beckhelvyn, and the Cliffhouse.

29th November, 1648. Myself, with Mr. Thomas Offley,

and Lady Gerrard, christened my niece Mary, eldest daughter of my brother, George Evelyn, by my Lady Cotton, his second wife. I presented my niece a piece of plate which cost me £18, and caused this inscription to be set on it-

IN MEMORIAM FACTI.

ANNO cIC IX. xliix. CAL. DECEM. viii. VIRGINUM CASTISS: XTIANORUM INNOCENTISS: NEPT: SUAVIS: MARIAE, JOHAN. EVELYNUS AVUNCULUS ET SUSCEPTOR VASCULUM HOC CUM EPIGRAPHE L. M. Q. D.

AVE MARIA GRATIÂ SIS PLENA; DOMINUS TECUM.

2d December, 1648. This day I sold my manor of Hurcott for £3,400 to one Mr. Bridges.

13th December, 1648. The Parliament now sat up the whole night, and endeavored to have concluded the Isle of Wight Treaty; but were surprised by the rebel army; the members dispersed, and great confusion every where in expectation of what would be next.

17th December, 1648. I heard an Italian sermon, in Mercers' Chapel, one Dr. Middleton, an acquaintance of mine, preaching.

18th December, 1648. I got privately into the council of the rebel army, at Whitehall, where I heard horrid villanies.

This was a most exceedingly wet year, neither frost nor snow all the winter for more than six days in all. Cattle died every where of a murrain.

1st January, 1648-49. I had a lodging and some books at my father-in-law's house, Sayes Court.

2d January, 1649. I went to see my old friend and fellow-traveler, Mr. Henshaw, who had two rare pieces of Stenwyck's perspective.

17th January, 1649. To London. I heard the rebel, Peters, incite the rebel powers met in the Painted Chamber, to destroy his Majesty; and saw that archtraitor, Bradshaw, who not long after condemned him.

19th January, 1649. I returned home, passing an extraordinary danger of being drowned by our wherries falling foul in the night on another vessel then at anchor, shooting the bridge at three quarters' ebb, for which His mercy God Almighty be praised.

21st January, 1649. Was published my translation of Liberty and Servitude, for the preface of which I was severely threatened.

22d January, 1649. I went through a course of chemistry, at Sayes Court. Now was the Thames frozen over, and horrid tempesta of wind.

The villany of the rebels proceeding now so far as to try, condemn, and murder our excellent King on the 30th of this month, struck me with such horror, that I kept the day of his martyrdom a fast, and would not be present at that execrable wickedness; receiving the sad account of it from my brother George, and Mr. Owen, who came to visit me this afternoon, and recounted all the circumstances.

1st February, 1649. Now were Duke Hamilton, the Earl of Norwich, Lord Capell, etc., at their trial before the rebels' New Court of Injustice.

15th February, 1649. I went to see the collection of one Trean, a rich merchant, who had some good pictures, especially a rare perspective of Stenwyck; from thence, to other virtuosos.

The painter, La Neve has an Andromeda, but I think it a copy after Vandyke from Titian, for the original is in France. Webb, at the Exchange, has some rare things in miniature, of Breughel's, also Putti, in twelve squares, that were plundered from Sir James Palmer.

At Du Bois, we saw two tables of Putti, that were gotten, I know not how, out of the Castle of St. Angelo, by old Petit, thought to be Titian's; he had some good heads of Palma, and one of Stenwyck. Bellear showed us an excellent copy of his Majesty's Sleeping Venus and the Satyr, with other figures; for now they had plundered, sold, and dispersed a world of rare paintings of the King's, and his loyal subjects. After all, Sir William Ducey showed me some excellent things in miniature, and in oil of Holbein's; Sir Thomas More's head, and a whole-length figure of Edward VI., which were certainly his Majesty's; also a picture of Queen Elizabeth; the Lady Isabella Thynne; a rare painting of Rothenhamer, being a Susanna; and a Magdalen, of Quintin, the blacksmith; also a Henry VIII., of Holbein; and Francis I., rare indeed, but of whose hand I know not.

16th February, 1649. Paris being now strictly besieged by the Prince de Condé, my wife being shut up with her father and mother, I wrote a letter of consolation to her; and, on the 22d, having recommended Obadiah Walker,

a learned and most ingenious person, to be tutor to, and travel with, Mr. Hillyard's two sons, returned to Sayes Court.

25th February, 1649. Came to visit me Dr. Joyliffe, discoverer of the lymphatic vessels, and an excellent anatomist.

26th February, 1649. Came to see me Captain George Evelyn, my kinsman, the great traveler, and one who believed himself a better architect than really he was; witness the portico in the Garden at Wotton; yet the great room at Albury is somewhat better understood. He had a large mind, but over-built everything.

27th February, 1649. Came out of France my wife's uncle (Paris still besieged), being robbed at sea by the Dunkirk pirates: I lost, among other goods, my wife's picture, painted by Monsieur Bourdon.

5th March, 1649. Now were the Lords murdered in the Palace Yard.

18th March, 1649. Mr. Owen, a sequestered and learned minister, preached in my parlor, and gave us the blessed Sacrament, now wholly out of use in the parish churches, on which the Presbyterians and fanatics had usurped.

21st March, 1649. I received letters from Paris from my wife, and from Sir Richard [Browne], with whom I kept up a political correspondence, with no small danger of being discovered.

25th March, 1649. I heard the Common Prayer (a rare thing in these days) in St. Peter's, at Paul's Wharf, London; and, in the morning, the Archbishop of Armagh, that pious person and learned man, Usher, in Lincoln's-Inn Chapel.

2d April, 1649. To London, and inventoried my movables that had hitherto been dispersed for fear of plundering: wrote into France, touching my sudden resolutions of coming over to them. On the 8th, again heard an excellent discourse from Archbishop Usher, on Ephes. 4, v. 26-27.

My Italian collection being now arrived, came Moulins, the great chirurgion, to see and admire the Tables of Veins and Arteries, which I purchased and caused to be drawn out of several human bodies at Padua.

11th April, 1649. Received news out of France that peace was concluded; dined with Sir Joseph Evelyn, at

Westminster; and on the 13th I saw a private dissection at Moulin's house.

17th April, 1649. I fell dangerously ill of my head; was blistered and let bleed behind the ears and forehead: on the 23d, began to have ease by using the fumes of camomile on embers applied to my ears, after all the physicians had done their best.

29th April, 1649. I saw in London a huge ox bred in Kent, 17 feet in length, and much higher than I could reach.

12th May, 1649. I purchased the manor of Warley Magna, in Essex: in the afternoon went to see Gildron's collections of paintings, where I found Mr. Endymion Porter, of his late Majesty's bedchamber.

17th May, 1649. Went to Putney by water, in the barge with divers ladies, to see the schools, or colleges, of the young gentlewomen.

19th May, 1649. To see a rare cabinet of one Delabarr, who had some good paintings, especially a monk at his beads.

30th May, 1649. Unkingship was proclaimed, and his Majesty's statues thrown down at St. Paul's Portico, and the Exchange.

7th June, 1649. I visited Sir Arthur Hopton\* (brother to Sir Ralph, Lord Hopton, that noble hero), who having been Ambassador extraordinary in Spain, sojourned some time with my father-in-law at Paris, a most excellent person. Also Signora Lucretia, a Greek lady, whom I knew in Italy, now come over with her husband, an English gentleman. Also, the Earl and Countess of Arundel, taking leave of them and other friends now ready to depart for France. This night was a scuffle between some rebel soldiers and gentlemen about the Temple.

June 10th, 1649. Preached the Archbishop of Armagh in Lincoln's-Inn, from Romans 5, verse 13. I received the blessed Sacrament, preparatory to my journey.

13th June, 1649. I dined with my worthy friend, Sir John Owen, newly freed from sentence of death among the lords that suffered. With him was one Carew, who played incomparably on the Welsh harp; afterward I treated divers ladies of my relations, in Spring Garden.

\* Sir Arthur Hopton was uncle, not brother, to Lord Hopton (so well known for his services to Charles in the course of the Civil War).

This night was buried with great pomp, Dorislaus, slain at the Hague, the villain who managed the trial against his sacred Majesty.

17th June, 1649. I got a pass from the rebel Bradshaw, then in great power.

20th June, 1649. I went to Putney, and other places on the Thames, to take prospects in crayon, to carry into France, where I thought to have them engraved.

2d July, 1649. I went from Wotton to Godstone (the residence of Sir John Evelyn), where was also Sir John Evelyn of Wilts., when I took leave of both Sir Johns and their ladies. Mem. the prodigious memory of Sir John of Wilts' daughter, since married to Mr. W. Pierrepont, and mother of the present Earl of Kingston. I returned to Sayes Court this night.

4th July, 1649. Visited Lady Hatton, her lord sojourning at Paris with my father-in-law.

9th July, 1649. Dined with Sir Walter Pye, and my good friend, Mr. Eaton, afterward a judge, who corresponded with me in France.

11th July, 1649. Came to see me old Alexander Rosse, the divine historian and poet; Mr. Henshaw, Mr. Scudamore, and other friends to take leave of me.

12th July, 1649. It was about three in the afternoon, I took oars for Gravesend, accompanied by my cousin, Stephens, and sister, Glanville, who there supped with me and returned; whence I took post immediately to Dover, where I arrived by nine in the morning; and, about eleven that night, went on board a barque guarded by a pinnacle of eight guns; this being the first time the Packet-boat had obtained a convoy, having several times before been pillaged. We had a good passage, though chased for some hours by a pirate, but he dared not attack our frigate, and we then chased him till he got under the protection of the castle at Calais. It was a small privateer belonging to the Prince of Wales. I carried over with me my servant, Richard Hoare, an incomparable writer of several hands, whom I afterward preferred in the Prerogative Office, at the return of his Majesty. Lady Catherine Scott, daughter of the Earl of Norwich, followed us in a shallop, with Mr. Arthur Slingsby, who left England *incognito*. At the entrance of the town, the Lieutenant Governor, being on his horse

with the guards, let us pass courteously. I visited Sir Richard Lloyd, an English gentleman, and walked in the church, where the ornament about the high altar of black marble is very fine, and there is a good picture of the Assumption. The citadel seems to be impregnable, and the whole country about it to be laid under water by sluices for many miles.

16th July, 1649. We departed from Paris, in company with that very pleasant lady, Lady Catherine Scott, and others. In all this journey we were greatly apprehensive of parties, which caused us to alight often out of our coach and walk separately on foot, with our guns on our shoulders, in all suspected places.

1st August, 1649. At three in the afternoon we came to St. Denis, saw the rarities of the church and treasury; and so to Paris that evening.

The next day, came to welcome me at dinner the Lord High Treasurer Cottington, Sir Edward Hyde, Chancellor, Sir Edward Nicholas, Secretary of State, Sir George Carteret, Governor of Jersey, and Dr. Earle, having now been absent from my wife above a year and a half.

18th August, 1649. I went to St. Germain's, to kiss his Majesty's hand; in the coach, which was my Lord Wilmot's, went Mrs. Barlow, the King's mistress\* and mother to the Duke of Monmouth, a brown, beautiful, bold, but insipid creature.

19th August, 1649. I went to salute the French King and the Queen Dowager; and, on the 21st, returned in one of the Queen's coaches with my Lord Germain, Duke of Buckingham, Lord Wentworth, and Mr. Croftes, since Lord Croftes.

7th September, 1649. Went with my wife and dear Cousin to St. Germain's, and kissed the Queen-Mother's hand; dined with my Lord Keeper and Lord Hatton. Divers of the great men of France came to see the King. The next day, came the Prince of Condé. Returning to Paris, we went to see the President Maisson's palace, built cas-

\*The lady here referred to was Lacy, daughter of Richard Walters, Esq., of Haverfordwest. She had two children by the King; James, subsequently so celebrated as the Duke of Monmouth, and Mary, whose lot was obscure in comparison with that of her brother, but of course infinitely happier. She married a Mr. William Sansfield, of Ireland, and after his death, William Fanshawe, Esq.,

tle-wise, of a milk-white fine freestone; the house not vast, but well contrived, especially the staircase, and the ornaments of Putti, about it. It is environed in a dry moat, the offices under ground, the gardens very excellent with extraordinary long walks, set with elms, and a noble prospect toward the forest, and on the Seine toward Paris. Take it altogether, the meadows, walks, river, forest, corn-ground, and vineyards, I hardly saw anything in Italy to exceed it. The iron gates are very magnificent. He has pulled down a whole village to make room for his pleasure about it.

12th September, 1649. Dr. Crighton, a Scotchman, and one of his Majesty's chaplains, a learned Grecian who set out the Council of Florence, preached.

13th September, 1649. The King invited the Prince of Condé to supper at St. Cloud; there I kissed the Duke of York's hand in the tennis court, where I saw a famous match between Monsieur Saumeurs and Colonel Cooke, and so returned to Paris. It was noised about that I was knighted, a dignity I often declined.

1st October, 1649. Went with my cousin Tuke (afterward Sir Samuel), to see the fountains of St. Cloud and Ruel; and, after dinner, to talk with the poor ignorant and superstitious anchorite at Mount Calvary, and so to Paris.

2d October, 1649. Came Mr. William Coventry (afterward Sir William) and the Duke's secretary, etc., to visit me.

5th October, 1649. Dined with Sir George Ratcliffe, the great favorite of the late Earl of Strafford, formerly Lord Deputy of Ireland, decapitated.

7th October, 1649. To the Louvre, to visit the Countess of Moreton, governess to Madame.

15th October, 1649. Came news of Drogheda being taken by the rebels, and all put to the sword, which made us very sad, forerunning the loss of all Ireland.

21st October, 1649. I went to hear Dr. d'Avinson's lecture in the physical garden, and see his laboratory, he being Prefect of that excellent garden, and Professor Botanicus.

30th October, 1649. I was at the funeral of one Mr. Downes, a sober English gentleman. We accompanied his corpse to Charenton, where he was interred in a

cabbage-garden, yet with the office of our church, which was said before in our chapel at Paris. Here I saw also where they buried the great soldier, Cassion, who had a tomb built over him like a fountain, the design and materials mean enough. I returned to Paris with Sir Philip Musgrave, and Sir Marmaduke Langdale, since Lord Langdale's Memorandum. This was a very sickly and mortal autumn.

5th November, 1649. I received divers letters out of England, requiring me to come over about settling some of my concerns.

7th November, 1649. Dr. George Morley (since Bishop of Winchester) preached in our chapel on Matthew 4, verse 3.

18th November, 1649. I went with my father-in-law to see his audience at the French Court, where next the Pope's Nuncio, he was introduced by the master of ceremonies, and, after delivery of his credentials, as from our King, since his father's murder, he was most graciously received by the King of France and his mother, with whom he had a long audience. This was in the Palais Cardinal.

After this, being presented to his Majesty and the Queen Regent, I went to see the house built by the late great Cardinal de Richelieu. The most observable thing is the gallery, painted with the portraits of the most illustrious persons and single actions in France, with innumerable emblems between every table. In the middle of the gallery, is a neat chapel, rarely paved in work and devices of several sorts of marble, besides the altar-piece and two statues of white marble, one of St. John, the other of the Virgin Mary, by Bernini. The rest of the apartments are rarely gilded and carved, with some good modern paintings. In the presence hang three huge branches of crystal. In the French King's bed-chamber, is an alcove like another chamber, set as it were in a chamber like a movable box, with a rich embroidered bed. The fabric of the palace is not magnificent, being but of two stories; but the garden is so spacious as to contain a noble basin and fountain continually playing, and there is a mall, with an elbow, or turning, to protract it. So I left his Majesty on the terrace, busy in seeing a bull-baiting, and returned

home in Prince Edward's coach with Mr. Paul, the Prince Elector's agent.

19th November, 1649. Visited Mr. Waller, where meeting Dr. Holden, an English Sorbonne divine, we fell into some discourse about religion.

28th December, 1649. Going to wait on Mr. Waller, I viewed St. Stephen's church; the building, though Gothic, is full of carving; within it is beautiful, especially the choir and winding stairs. The glass is well painted, and the tapestry hung up this day about the choir, representing the conversion of Constantine, was exceedingly rich.

I went to that excellent engraver, Du Bosse, for his instruction about some difficulties in perspective which were delivered in his book.

I concluded this year in health, for which I gave solemn thanks to Almighty God.\*

29th December, 1649. I christened Sir Hugh Rilic's child with Sir George Radcliffe in our chapel, the parents being so poor that they had provided no gossips, so as several of us drawing lots it fell on me, the Dean of Peterborough (Dr. Cousin) officiating: we named it Andrew, being on the eve of that Apostle's day.

1st January, 1649-50. I began this Jubilee with the public office in our chapel: dined at my Lady Herbert's, wife of Sir Edward Herbert, afterward Lord Keeper.

18th January, 1650. This night was the Prince of Condé and his brother carried prisoners to the Bois de Vincennes.

6th February, 1650. In the evening, came Signor Alessandro, one of the Cardinal Mazarine's musicians, and a person of great name for his knowledge in that art, to visit my wife, and sung before divers persons of quality in my chamber.

1st March, 1650. I went to see the masquerados, which was very fantastic; but nothing so quiet and solemn as I found it at Venice.

13th March, 1650. Saw a triumph in Monsieur del Camp's Academy, where divers of the French and English noblesse, especially my Lord of Ossory, and Richard, sons to the Marquis of Ormond (afterward Duke), did

\*This he does not fail to repeat at the end of every year, but it will not always be necessary here to insert it.

their exercises on horseback in noble equipage, before a world of spectators and great persons, men and ladies. It ended in a collation.

. 25th April, 1650. I went out of town to see Madrid, a palace so called, built by Francis I. It is observable only for its open manner of architecture, being much of terraces and galleries one over another to the very roof; and for the materials, which are mostly of earth painted like porcelain, or China-ware, whose colors appear very fresh, but is very fragile. There are whole statues and relieves of this pottery, chimney-pieces, and columns both within and without. Under the chapel is a chimney in the midst of a room parted from the *Salle des Gardes*. The house is fortified with a deep ditch, and has an admirable vista toward the Bois de Boulogne and river.

. 30th April, 1650. I went to see the collection of the famous sculptor, Stefano de la Bella, returning now into Italy, and bought some prints; and likewise visited Perelle, the landscape graver.

. 3d May, 1650. At the hospital of La Charité I saw the operation of cutting for the stone. A child of eight or nine years old underwent the operation with most extraordinary patience, and expressing great joy when he saw the stone was drawn. The use I made of it was, to give Almighty God hearty thanks that I had not been subject to this deplorable infirmity.

. 7th May, 1650. I went with Sir Richard Browne's lady and my wife, together with the Earl of Chesterfield, Lord Ossory and his brother, to Vamber, a place near the city famous for butter; when, coming homeward, being on foot, a quarrel arose between Lord Ossory and a man in a garden, who thrust Lord Ossory from the gate with uncivil language; on which our young gallants struck the fellow on the pate, and bade him ask pardon, which he did with much submission, and so we parted. But we were not gone far before we heard a noise behind us, and saw people coming with guns, swords, staves, and forks, and who followed, flinging stones; on which, we turned, and were forced to engage, and with our swords, stones, and the help of our servants (one of whom had a pistol) made our retreat for near a quarter of a mile, when we took shelter in a house, where we were besieged, and at length forced to submit to be prisoners. Lord Hatton, with

some others, were taken prisoners in the flight, and his lordship was confined under three locks and as many doors in this rude fellow's master's house, who pretended to be steward to Monsieur St. Germain, one of the presidents of the Grand Chambre du Parlement, and a Canon of Nôtre Dame. Several of us were much hurt. One of our lackeys escaping to Paris, caused the bailiff of St. Germain to come with his guard and rescue us. Immediately afterward, came Monsieur St. Germain himself, in great wrath, on hearing that his houskeeper was assaulted; but when he saw the King's officers, the gentlemen and noblemen, with his Majesty's Resident and understood the occasion, he was ashamed of the accident, requesting the fellow's pardon, and desiring the ladies to accept their submission and a supper at his house. It was ten o'clock at night ere we got to Paris, guarded by Prince Griffith (a Welsh hero going under that name, and well known in England for his extravagancies), together with the scholars of two academies, who came forth to assist and meet us on horseback, and would fain have alarmed the town we received the affront from: which, with much ado, we prevented.

12th May, 1650. Complaint being come to the Queen and Court of France of the affront we had received, the President was ordered to ask pardon of Sir R. Browne, his Majesty's Resident, and the fellow to make submission, and be dismissed. There came along with him the President de Thou, son of the great Thuanus [the historian], and so all was composed. But I have often heard that gallant gentleman, my Lord Ossory, affirm solemnly that in all the conflicts he was ever in at sea or on land (in the most desperate of both which he had often been), he believed he was never in so much danger as when these people rose against us. He used to call it the *bataille de Vambre*, and remember it with a great deal of mirth as an adventure, *en cavalier*.

24th May, 1650. We were invited by the Noble Academies to a running at the ring where were many brave horses, gallants, and ladies, my Lord Stanhope entertaining us with a collation.

12th June, 1650. Being Trinity Sunday, the Dean of Peterborough preached; after which there was an ordination of two divines, Durell and Brevent (the one was

afterward Dean of Windsor, the other of Durham, both very learned persons). The Bishop of Galloway officiated with great gravity, after a pious and learned exhortation declaring the weight and dignity of their function, especially now in a time of the poor Church of England's affliction. He magnified the sublimity of the calling, from the object, viz, the salvation of men's souls, and the glory of God; producing many human instances of the transitoriness and vanity of all other dignity; that of all the triumphs the Roman conquerors made, none was comparable to that of our Blessed Savior's, when he led captivity captive, and gave gifts to men, namely, that of the Holy Spirit, by which his faithful and painful ministers triumphed over Satan as often as they reduced a sinner from the error of his ways. He then proceeded to the ordination. They were presented by the Dean in their surplices before the altar, the Bishop sitting in a chair at one side; and so were made both Deacons and Priests at the same time, in regard to the necessity of the times, there being so few Bishops left in England, and consequently danger of a failure of both functions. Lastly, they proceeded to the Communion. This was all performed in Sir Richard Browne's chapel, at Paris.

13th June, 1650. I sate to the famous sculptor, Nanteuil, who was afterward made a knight by the French King for his art. He engraved my picture in copper. At a future time he presented me with my own picture, done all with his pen; an extraordinary curiosity.

21st June, 1650. I went to see the Samaritan, or pump, at the end of the Pont Neuf, which, though to appearance promising no great matter, is, besides the machine, furnished with innumerable rarities both of art and nature; especially the costly grotto, where are the fairest corals, growing out of the very rock, that I have seen; also great pieces of crystals, amethysts, gold in the mine, and other metals and marcasites, with two great conchas, which the owner told us cost him 200 crowns at Amsterdam. He showed us many landscapes and prospects, very rarely painted in miniature, some with the pen and crayon; divers antiquities and relievos of Rome; above all, that of the inside of the amphitheater of Titus, incomparably drawn by Monsieur St. Clere himself; two boys and three skeletons, molded by Fiamingo; a book

of statues, with the pen made for Henry IV., rarely executed, and by which one may discover many errors in the *taille-douce* of Perrier, who has added divers conceits of his own that are not in the originals. He has likewise an infinite collection of *taille-douces*, richly bound in morocco.

He led us into a stately chamber furnished to have entertained a prince, with pictures of the greatest masters, especially a Venus of Perino del Vaga; the Putti carved in the chimney-piece by the Fleming; the vases of porcelain, and many designed by Raphael; some paintings of Poussin, and Fioravanti; antiques in brass; the looking-glass and stands rarely carved. In a word, all was great, choice, and magnificent, and not to be passed by as I had often done, without the least suspicion that there were such rare things to be seen in that place. At a future visit, he showed a new grotto and a bathing place, hewn through the battlements of the arches of Pont Neuf into a wide vault at the intercolumniation, so that the coaches and horses thundered over our heads.

27th June, 1650. I made my will, and, taking leave of my wife and other friends, took horse for England, paying the messenger eight pistoles for me and my servant to Calais, setting out with seventeen in company well-armed, some Portuguese, Swiss, and French, whereof six were captains and officers. We came the first night to Beaumont; next day, to Beauvais, and lay at Pois, and the next, without dining, reached Abbeville; next, dined at Montreuil, and proceeding met a company on foot (being now within the inroads of the parties which dangerously infest this day's journey from St. Omers and the frontiers), which we drew very near to, ready and resolute to charge through, and accordingly were ordered and led by a captain of our train; but, as we were on the speed, they called out, and proved to be Scotchmen, newly raised and landed, and few among them armed. This night, we were well treated at Boulogne. The next day, we marched in good order, the passage being now exceeding dangerous, and got to Calais by a little after two. The sun so scorched my face, that it made the skin peel off.

I dined with Mr. Booth, his Majesty's agent; and, about three in the afternoon, embarked in the packet-

boat; hearing there was a pirate then also setting sail, we had security from molestation, and so with a fair S. W. wind in seven hours we landed at Dover. The busy watchman would have us to the mayor to be searched, but the gentleman being in bed, we were dismissed.

Next day, being Sunday, they would not permit us to ride post, so that afternoon our trunks were visited.

The next morning, by four, we set out for Canterbury, where I met with my Lady Catherine Scott, whom that very day twelve months before I met at sea going for France; she had been visiting Sir Thomas Peyton, not far off, and would needs carry me in her coach to Gravesend. We dined at Sittingbourne, came late to Gravesend, and so to Deptford, taking leave of my lady about four the next morning.

5th July, 1650. I supped in the city with my Lady Catherine Scott, at one Mr. Dubois, where was a gentlewoman called Everard, who was a very great chemist.

Sunday 7th July, 1650. In the afternoon, having a mind to see what was doing among the Rebels, then in full possession at Whitehall, I went thither, and found one at exercise in the chapel, after their way; thence, to St. James's, where another was preaching in the court abroad.

17th July, 1650. I went to London to obtain a pass,\* intending but a short stay in England.

25th July, 1650. I went by Epsom to Wotton, saluting Sir Robert Cook and my sister Glanville; the country was now much molested by soldiers, who took away gentlemen's horses for the service of the state, as then called.

\*A copy of it is subjoined. "These are to will and require you to permit and suffer the bearer thereof, John Evelyn, Esq., to transport himself, two servants, and other necessaries, into any port of France without any your let or molestations, of which you are not to fail, and for which this shall be your sufficient warrant. Given at the Council of State at Whitehall this 25th of June, 1650.

"Signed In the Name and by Order of the Council of State,  
appointed by authority of Parliament,

JO. BRADSHAW, President.

"To all Customers, Comptrollers and Searchers, and  
all other officers of the Ports, or Customs."

Subjoined to the signature, Evelyn has added in his own writing; "The hand of that villain who sentenced our Charles I. of Blessed Memory." Its endorsement, also in his writing, is, "The Pass from the Council of State, 1650."

4th August, 1650. I heard a sermon at the Rolls; and, in the afternoon, wandered to divers churches, the pulpits full of novices and novelties.

6th August, 1650. To Mr. Walker's, a good painter, who showed me an excellent copy of Titian.

12th August, 1650. Set out for Paris, taking post at Gravesend, and so that night to Canterbury, where being surprised by the soldiers, and having only an antiquated pass, with some fortunate dexterity I got clear of them though not without extraordinary hazard, having before counterfeited one with success, it being so difficult to procure one of the rebels without entering into oaths, which I never would do. At Dover, money to the searchers and officers was as authentic as the hand and seal of Bradshawe himself, where I had not so much as my trunk opened.

13th August, 1650. At six in the evening, set sail for Calais; the wind not favorable, I was very sea-sick, coming to an anchor about one o'clock; about five in the morning, we had a long boat to carry us to land, though at a good distance; this we willingly entered, because two vessels were chasing us; but, being now almost at the harbor's mouth, through inadvertency there broke in upon us two such heavy seas, as had almost sunk the boat, I being near the middle up in water. Our steersman, it seems, apprehensive of the danger, was preparing to leap into the sea and trust to swimming, but seeing the vessel emerge, he put her into the pier, and so, God be thanked! we got to Calais, though wet.

Here I waited for company, the passage toward Paris being still infested with volunteers from the Spanish frontiers.

16th August, 1650. The Regiment of Picardy, consisting of about 1,400 horse and foot (among them was a captain whom I knew), being come to town, I took horses for myself and servant, and marched under their protection to Boulogne. It was a miserable spectacle to see how these tattered soldiers pillaged the poor people of their sheep, poultry, corn, cattle, and whatever came in their way; but they had such ill pay, that they were ready themselves to starve.

As we passed St. Denis, the people were in uproar, the guards doubled, and everybody running with their

movables to Paris, on an alarm that the enemy was within five leagues of them; so miserably exposed was even this part of France at this time.

The 30th, I got to Paris, after an absence of two months only.

1st September, 1650. My Lady Herbert invited me to dinner; Paris, and indeed all France, being full of loyal fugitives.

Came Mr. Waller to see me, about a child of his which the Popish midwife had baptized.

15th October, 1650. Sir Thomas Osborne (afterward Lord Treasurer) and Lord Stanhope shot for a wager of five louis, to be spent on a treat; they shot so exact that it was a drawn match.

1st November, 1650. Took leave of my Lord Stanhope, going on his journey toward Italy; also visited my Lord Hatton, Comptroller of his Majesty's Household, the Countess of Morton, Governess to the Lady Henrietta, and Mrs. Gardner, one of the Queen's maids of honor.

6th November, 1650. Sir Thomas Osborne supping with us, his groom was set upon in the street before our house, and received two wounds, but gave the assassin nine, who was carried off to the Charité Hospital. Sir Thomas went for England on the 8th, and carried divers letters for me to my friends.

16th November, 1650. I went to Monsieur Visse's, the French King's Secretary, to a concert of French music and voices, consisting of twenty-four, two theorbos, and but one bass viol, being a rehearsal of what was to be sung at vespers at St. Cecelia's, on her feast, she being patroness of Musician's. News arrived of the death of the Princess of Orange of the smallpox.

14th December, 1650. I went to visit Mr. Ratcliffe, in whose lodging was an imposter that had liked to have imposed upon us a pretended secret of multiplying gold; it is certain he had lived some time in Paris in extraordinary splendor, but I found him to be an egregious cheat.

22d December, 1650. Came the learned Dr. Boet to visit me.

31st December, 1650. I gave God thanks for his mercy and protection the past year, and made up my accounts, which came this year to 7,015 livres, near £600 sterling.

1st January, 1650-51. I wrote to my brother at Wotton,

about his garden and fountains. After evening prayer, Mr. Wainsford called on me: he had long been Consul at Aleppo, and told me many strange things of those countries, the Arabs especially.

27th January, 1651. I had letters of the death of Mrs. Newton, my grand-mother-in-law; she had a most tender care of me during my childhood, and was a woman of extraordinary charity and piety.

29th January, 1651. Dr. Duncan preached on 8 Matt. v. 34, showing the mischief of covetousness. My Lord Marquis of Ormonde and Inchiquin, come newly out of Ireland, were this day at chapel.

9th February, 1651. Cardinal Mazarin was proscribed by Arrêt du Parlement, and great commotions began in Paris.

23d February, 1651. I went to see the Bonnes Hommes, a convent that has a fair cloister painted with the lives of hermits; a glorious altar now erecting in the chapel; the garden on the rock with divers descents, with a fine vineyard, and a delicate prospect toward the city.

24th February, 1651. I went to see a dromedary, a very monstrous beast, much like the camel, but larger. There was also dancing on the rope; but, above all, surprising to those who were ignorant of the address, was the water-spouter, who, drinking only fountain-water, rendered out of his mouth in several glasses all sorts of wine and sweet waters. For a piece of money he discovered the secret to me. I waited on Friar Nicholas at the convent at Chaillot, who, being an excellent chemist, showed me his laboratory, and rare collection of spagyric remedies. He was both physician and apothecary of the convent, and, instead of the names of his drugs, he painted his boxes and pots with the figure of the drug, or simple, contained in them. He showed me as a rarity some  $\Phi$  of antimony. He had cured Monsieur Senatin of a desperate sickness, for which there was building a monumental altar that was to cost £1,500.

11th March, 1651. I went to the Châtelet, or prison, where a malefactor was to have the question, or torture, given to him, he refusing to confess the robbery with which he was charged, which was thus: they first bound his wrist with a strong rope, or small cable, and one end of it to an iron ring made fast to the wall, about

four feet from the floor, and then his feet with another cable, fastened about five feet further than his utmost length to another ring on the floor of the room. Thus suspended, and yet lying but aslant, they slid a horse of wood under the rope which bound his feet, which so exceedingly stiffened it, as severed the fellow's joints in miserable sort, drawing him out at length in an extraordinary manner, he having only a pair of linen drawers on his naked body. Then, they questioned him of a robbery (the lieutenant being present and a clerk that wrote), which not confessing, they put a higher horse under the rope, to increase the torture and extension. In this agony, confessing nothing, the executioner with a horn (just such as they drench horses with) stuck the end of it into his mouth, and poured the quantity of two buckets of water down his throat and over him, which so prodigiously swelled him, as would have piled and affrighted any one to see it; for all this, he denied all that was charged to him. They then let him down, and carried him before a warm fire to bring him to himself, being now to all appearance dead with pain. What became of him, I know not; but the gentleman whom he robbed constantly averred him to be the man, and the fellow's suspicious pale looks, before he knew he should be racked, betrayed some guilt; the lieutenant was also of that opinion, and told us at first sight (for he was a lean, dry, black young man) he would conquer the torture; and so it seems they could not hang him, but did use in such cases, where the evidence is very presumptive, to send them to the galleys, which is as bad as death.

There was another malefactor to succeed, but the spectacle was so uncomfortable, that I was not able to stay the sight of another. It represented yet to me the intolerable sufferings which our Blessed Savior must needs undergo, when his body was hanging with all its weight upon the nails on the cross.

20th March, 1651. I went this night with my wife to a ball at the Marquis de Creveccœur's, where were divers princes, dukes, and great persons; but what appeared to me very mean was, that it began with a puppet-play.

6th May, 1651. I attended the ambassador to a masque at Court, where the French King in person danced five entries, but being engaged in discourse, and better enter-

tained with one of the Queen-Regent's secretaries, I soon left the entertainment.

11th May, 1651. To the Palace Cardinal, where the Master of the Ceremonies placed me to see the royal masque, or opera. The first scene represented a chariot of singers composed of the rarest voices that could be procured, representing Cornaro\* and Temperance; this was overthrown by Bacchus and his revelers; the rest consisted of several entries and pageants of excess, by all the elements. A masque representing fire was admirable; then came a Venus out of the clouds. The conclusion was a heaven, whither all ascended. But the glory of the masque was the great persons performing in it, the French King, his brother the Duke of Anjou, with all the grandees of the Court, the King performing to the admiration of all. The music was twenty-nine violins, vested à l'antique, but the habits of the masquers were stupendously rich and glorious.

23d May, 1651. I went to take leave of the ambassadors for Spain, which were my Lord Treasurer Cottington and Sir Edward Hyde; and, as I returned, I visited Mr. Morine's garden, and his other rarities, especially corals, minerals, stones, and natural curiosities; crabs of the Red Sea, the body no bigger than a small bird's egg, but flatter, and the two legs, or claws, a foot in length. He had abundance of shells, at least 1,000 sorts, which furnished a cabinet of great price; and had a very curious collection of scarabees and insects, of which he was compiling a natural history. He had also the pictures of his choice flowers and plants in miniature. He told me there were 10,000 sorts of tulips only. He had *taille-douces* out of number; the head of the rhinoceros bird, which was very extravagant, and one butterfly resembling a perfect bird.

25th May, 1651. I went to visit Mr. Thomas White, a learned priest and famous philosopher,† author of the book "De Mundo," with whose worthy brother I was well

\* The famous Venetian writer on Temperance.

† A native of Essex, who was born in 1582, educated abroad, and, his family being Catholic, became a priest of that church, the sub-rector of the college at Douay. He advocated the Cartesian philosophy, and this brought him into an extensive correspondence with Hobbes and Des. cartes, in the course of which he Latinized his name into Thomas Albius, or De Albis. He died in 1676.

acquainted at Rome. I was shown a cabinet of Maroquin, or Turkey leather, so curiously inlaid with other leather, and gilding, that the workman demanded for it 800 livres.

The Dean (of Peterborough) preached on the feast of Pentecost, perstringing those of Geneva for their irreverence of the Blessed Virgin.

4th June, 1651. Trinity Sunday, I was absent from church in the afternoon on a charitable affair for the Abbess of Bourcharvant, who but for me had been abused by that chemist, Du Menie. Returning, I stepped into the Grand Jesuits, who had this high day exposed their Cibarium, made all of solid gold and imagery, a piece of infinite cost. Dr. Croydon, coming out of Italy and from Padua, came to see me, on his return to England.

5th June, 1651. I accompanied my Lord Strafford, and some other noble persons, to hear Madam Lavarán sing, which she did both in French and Italian excellently well, but her voice was not strong.

7th June, 1651. Corpus Christi Day, there was a grand procession, all the streets tapestried, several altars erected there, full of images, and other rich furniture, especially that before the Court, of a rare design and architecture. There were abundance of excellent pictures and great vases of silver.

13th June, 1651. I went to see the collection of one Monsieur Poignant, which for variety of agates, crystals, onyxes, porcelain, medals, statues, relievos, paintings, *taille-douces*, and antiquities, might compare with the Italian virtuosos.

21st June, 1651. I became acquainted with Sieur William Curtius, a very learned and judicious person of the Palatinate. He had been a scholar to Alstedius, the Encyclopedist, was well advanced in years, and now Resident for his Majesty at Frankfort.

2d July, 1651. Came to see me the Earl of Strafford, Lord Ossory and his brother, Sir John Southcott, Sir Edward Stawell, two of my Lord Spencer's sons, and Dr. Stewart, Dean of St. Paul's, a learned and pious man, where we entertained the time upon several subjects, especially the affairs of England, and the lamentable condition of our Church. The Lord Gerrard also called to see my collection of sieges and battles.

21st July, 1651. An extraordinary fast was celebrated in our Chapel, Dr. Stewart, Dean of St. Paul's, preaching.

2d August, 1651. I went with my wife to Conflans, where were abundance of ladies and others bathing in the river; the ladies had their tents spread on the water for privacy.

29th August, 1651. Was kept as a solemn fast for the calamities of our poor Church, now trampled on by the the rebels. Mr. Waller, being at St. Germain's, desired me to send him a coach from Paris, to bring my wife's goddaughter to Paris, to be buried by the Common Prayer.

6th September, 1651. I went with my wife to St. Germain's, to condole with Mr. Waller's loss. I carried with me and treated at dinner that excellent and pious person the Dean of St. Paul's, Dr. Stewart, and Sir Lewis Dives (half-brother to the Earl of Bristol), who entertained us with his wonderful escape out of prison in Whitehall, the very evening before he was to have been put to death, leaping down out of a jakes two stories high into the Thames at high water, in the coldest of winter, and at night; so as by swimming he got to a boat that attended for him, though he was guarded by six musketeers. After this, he went about in women's habit, and then in a small-coal-man's, traveling 200 miles on foot, embarked for Scotland with some men he had raised, who coming on shore were all surprised and imprisoned on the Marquis of Montrose's score; he not knowing anything of their barbarous murder of that hero. This he told us was his fifth escape, and none less miraculous; with this note, that the charging through 1,000 men armed, or whatever danger could befall a man, he believed could not more confound and distract a man's thoughts than the execution of a premeditated escape, the passions of hope and fear being so strong. This knight was indeed a valiant gentleman; but not a little given to romance, when he spoke of himself. I returned to Paris the same evening.

7th September, 1651. I went to visit Mr. Hobbes, the famous philosopher of Malmesbury, with whom I had long acquaintance. From his window we saw the whole equipage and glorious cavalcade of the young French Monarch, Louis XIV., passing to Parliament, when first he took the kingly government on him, now being in his

14th year, out of his minority and the Queen Regent's pupillage. First came the captain of the King's Aids, at the head of 50, richly liveried; next, the Queen-Mother's Light Horse, 100, the lieutenant being all over covered with embroidery and ribbons, having before him four trumpets habited in black velvet, full of lace, and casques of the same. Then, the King's Light Horse, 200, richly habited, with four trumpets in blue velvet embroidered with gold, before whom rode the Count d'Olonne coronet [cornet], whose belt was set with pearl. Next went the grand Prévôt's company on foot, with the Prévôt on horseback; after them, the Swiss in black velvet toques, led by two gallant cavaliers habited in scarlet-colored satin, after their country fashion, which is very fantastic; he had in his cap a *pennach* of heron, with a band of diamonds, and about him twelve little Swiss boys, with halberds. Then, came the *Aide des Cérémonies*; next, the grantees of court, governors of places and lieutenants-general of provinces, magnificently habited and mounted; among whom I must not forget the Chevalier Paul, famous for many sea-fights and signal exploits there, because it is said he had never been an Academicist, and yet governed a very unruly horse, and besides his rich suit his Malta Cross was esteemed at 10,000 crowns. These were headed by two trumpets, and the whole troop, covered with gold, jewels, and rich caparisons, were followed by six trumpets in blue velvet also, preceding as many heralds in blue velvet *semée* with fleurs-de-lis, caduces in their hands, and velvet caps on their heads; behind them, came one of the masters of the ceremonies; then, divers marshals and many of the nobility, exceeding splendid; behind them Count d'Harcourt, grand Ecuier, alone, carrying the King's sword in a scurf, which he held up in a blue sheath studded with fleurs-de-lis; his horse had for reins two scarfs of black taffet.

Then came abundance of footmen and pages of the King, new-liveried with white and red feathers; next, the *garde du corps* and other officers; and lastly, appeared the King himself on an Isabella barb, on which a housing *semée*, with crosses of the Order of the Holy Ghost, and fleurs-de-lis; the King himself, like a young Apollo, was in a suit so covered with rich embroidery, that one could perceive nothing of the stuff under it; he went almost

the whole way with his hat in hand, saluting the ladies and acclamators, who had filled the windows with their beauty, and the air with *Vive le Roi*. He seemed a prince of a grave yet sweet countenance. After the King, followed divers great persons of the Court, exceeding splendid, also his esquires; masters of horse, on foot; then the company of *Exempts des Gardes*, and six guards of Scotch. Between their files were divers princes of the blood, dukes, and lords; after all these, the Queen's guard of Swiss, pages, and footmen; then, the Queen-Mother herself, in a rich coach, with Monsieur the King's brother, the Duke of Orleans, and some other lords and ladies of honor. About the coach, marched her *Exempts des Gardes*; then the company of the King's *Gens d'armes*, well mounted, 150, with four trumpets, and as many of the Queen's; lastly, an innumerable company of coaches full of ladies and gallants. In this equipage, passed the monarch to the Parliament, henceforth exercising his kingly government.

15th September, 1651. I accompanied Sir Richard Browne, my father-in-law, to the French Court, when he had a favorable audience of the French King, and the Queen, his mother; congratulating the one on his coming to the exercise of his royal charge, and the other's prudent and happy administration during her late regency, desiring both to preserve the same amity for his master, our King, as they had hitherto done, which they both promised, with many civil expressions and words of course upon such occasions. We were accompanied both going and returning by the Introducer of Ambassadors and Aid of Ceremonies. I also saw the audience of Morosini, the Ambassador of Venice, and divers other Ministers of State from German Princes, Savoy, etc. Afterward I took a walk in the King's gardens, where I observed that the mall goes the whole square there of next the wall, and bends with an angle so made as to glance the wall; the angle is of stone. There is a basin at the end of the garden fed by a noble fountain and high jetto. There were in it two or three boats, in which the King now and then rows about. In another part is a complete fort, made with bastions, graft, half-moons, ravelins, and furnished with great guns cast on purpose to instruct the King in fortification.

22d September, 1651. Arrived the news of the fatal battle at Worcester, which exceedingly mortified our expectations.

28th September, 1651. I was shown a collection of books and prints made for the Duke of York.

1st October, 1651. The Dean of Peterborough [Dr. Cosin] preached on Job xiii., verse 15, encouraging our trust in God on all events and extremities, and for establishing and comforting some ladies of great quality, who were then to be discharged from our Queen-Mother's service unless they would go over to the Romish Mass.

The Dean, dining this day at our house, told me the occasion of publishing those Offices, which among the Puritans were wont to be called COSIN'S COZENING DEVOTIONS, by way of derision. At the first coming of the Queen into England, she and her French ladies were often upbraiding our religion, that had neither appointed nor set forth any hours of prayer, or breveries, by which ladies and courtiers, who have much spare time, might edify and be in devotion, as they had. Our Protestant ladies, scandalized it seems at this, moved the matter to the King; whereupon his Majesty presently called Bishop White to him and asked his thoughts of it, and whether there might not be found some forms of prayer proper on such occasions, collected out of some already approved forms, that so the court ladies and others (who spent much time in trifling) might at least appear as devout, and be so too, as the new-come-over French ladies, who took occasion to reproach our want of zeal and religion. On which, the Bishop told his Majesty that it might be done easily, and was very necessary; whereupon the King commanded him to employ some person of the clergy to compile such a Work, and presently the Bishop naming Dr. Cosin, the King enjoined him to charge the Doctor in his name to set about it immediately. This the Dean told me he did; and three months after, bringing the book to the King, he commanded the Bishop of London to read it over, and make his report; this was so well liked, that (contrary to former custom of doing it by a chaplain) he would needs give it an *imprimatur* under his own hand. Upon this there were at first only 200 copies printed; nor, said he, was there anything in the whole book of my own composure, nor did I set any

name as author to it, but those necessary prefaces, etc., out of the Fathers, touching the times and seasons of prayer; all the rest being entirely translated and collected out of an OFFICE published by authority of Queen Elizabeth, anno 1560, and our own Liturgy. This I rather mention to justify that industrious and pious Dean, who had exceedingly suffered by it, as if he had done it of his own head to introduce Popery, from which no man was more averse, and one who in this time of temptation and apostacy held and confirmed many to our Church.

29th October, 1651. Came news and letters to the Queen and Sir Richard Browne (who was the first that had intelligence of it) of his Majesty's miraculous escape after the fight at Worcester; which exceedingly rejoiced us.

7th November, 1651. I visited Sir Kenelm Digby, with whom I had much discourse on chemical matters. I showed him a particular way of extracting oil of sulphur, and he gave me a certain powder with which he affirmed that he had fixed ☿ (mercury) before the late King. He advised me to try and digest a little better, and gave me a water which he said was only rain water of the autumnal equinox, exceedingly rectified, very volatile; it had a taste of a strong vitriolic, and smelt like *aqua fortis*. He intended it for a dissolvent of calx of gold; but the truth is, Sir Kenelm was an arrant mountebank. Came news of the gallant Earl of Derby's execution by the rebels.

14th November, 1651. Dr. Clare preached on Genesis xxviii., verses 20, 21, 22, upon Jacob's vow, which he appositely applied, it being the first Sunday his Majesty came to chapel after his escape. I went, in the afternoon, to visit the Earl of Norwich; he lay at the Lord of Aubigny's.

16th November, 1651. Visited Dean Stewart, who had been sick about two days; when, going up to his lodging, I found him dead; which affected me much, as besides his particular affection and love to me, he was of incomparable parts and great learning, of exemplary life, and a very great loss to the whole church. He was buried the next day with all our church's ceremonies, many noble persons accompanying the corpse.

17th November, 1651. I went to congratulate the marriage of Mrs. Gardner, maid of honor, lately married to

that odd person, Sir Henry Wood: but riches do many things.

To see Monsieur Febur's course of chemistry, where I found Sir Kenelm Digby, and divers curious persons of learning and quality. It was his first opening the course and preliminaries, in order to operations.

1st December, 1651. I now resolved to return to England.

3d December, 1651. Sir Lewis Dives dined with us, who relating some of his adventures, showed me divers pieces of broad gold, which, being in his pocket in a fight, preserved his life by receiving a musket bullet on them, which deadened its violence, so that it went no further; but made such a stroke on the gold as fixed the impressions upon one another, battering and bending several of them; the bullet itself was flatted, and retained on it the color of the gold. He assured us that of a hundred of them, which it seems he then had in his pocket, not one escaped without some blemish. He affirmed that his being protected by a Neapolitan Prince, who connived at his bringing some horses into France, contrary to the order of the Viceroy, by assistance of some banditti, was the occasion of a difference between these great men, and consequently of the late civil war in that kingdom, the Viceroy having killed the Prince standing on his defense at his own castle. He told me that the second time of the Scots coming into England, the King was six times their number, and might easily have beaten them; but was betrayed, as were all other his designs and counsels, by some, even of his bed-chamber, meaning M. Hamilton, who copied Montrose's letters from time to time when his Majesty was asleep.

11th December, 1651. Came to visit me, Mr. Obadiah Walker, of University College, with his two pupils, the sons of my worthy friend, Henry Hyldiard, Esq., whom I had recommended to his care.

21st December, 1651. Came to visit my wife, Mrs. Lane,\* the lady who conveyed the King to the seaside at his escape from Worcester. Mr. John Cosin, son of

\* Sister of Colonel Lane, an English officer in the army of Charles II. dispersed at the battle of Worcester. She assisted the King in effecting his escape after that battle, his Majesty travelling with her disguised as her serving man, William Jackson.

the Dean, debauched by the priests, wrote a letter to me to mediate for him with his father. I prepared for my last journey, being now resolved to leave France altogether.

25th December, 1651. The King and Duke received the Sacrament first by themselves, the Lords Byron and Wilmot holding the long towel all along the altar.

26th December, 1651. Came news of the death of that rebel, Ireton.

31st December, 1651. Preached Dr. Wolley, after which was celebrated the Holy Communion, which I received also, preparative of my journey, being now resolved to leave France altogether, and to return God Almighty thanks for His gracious protection of me this past year.

2d January, 1651-52. News of my sister Glanville's death in childbed, which exceedingly affected me.

I went to one Mark Antonio, an incomparable artist in enameling. He wrought by the lamp figures in boss, of a large size, even to the life, so that nothing could be better molded. He told us stories of a Genoese jeweler, who had the great ARCANUM, and had made projection before him several times. He met him at Cyprus traveling into Egypt; in his return from whence, he died at sea, and the secret with him, that else he had promised to have left it to him; that all his effects were seized on, and dissipated by the Greeks in the vessel, to an immense value. He also affirmed, that being in a goldsmith's shop at Amsterdam, a person of very low stature came in, and desired the goldsmith to melt him a pound of lead; which done, he unscrewed the pommel of his sword, and taking out of a little box a small quantity of powder, casting it into the crucible, poured an ingot out, which when cold he took up, saying, "Sir, you will be paid for your lead in the crucible," and so went out immediately. When he was gone the goldsmith found four ounces of good gold in it; but could never set eye again on the little man, though he sought all the city for him. Antonio asserted this with great obtestation; nor know I what to think of it, there are so many impostors and people who love to tell strange stories, as this artist did, who had been a great rover, and spoke ten different languages.

13th January, 1652. I took leave of Mr. Waller, who,

having been proscribed by the rebels, had obtained of them permission to return, was going to England.

29th January, 1652. Abundance of my French and English friends and some Germans came to take leave of me, and I set out in a coach for Calais, in an exceedingly hard frost which had continued for some time. We got that night to Beaumont; 30th, to Beauvais; 31st, we found the ways very deep with snow, and it was exceedingly cold; dined at Pois; lay at Pernée, a miserable cottage of miserable people in a wood, wholly unfurnished, but in a little time we had sorry beds and some provision, which they told me they hid in the wood for fear of the frontier enemy, the garrisons near them continually plundering what they had. They were often infested with wolves. I cannot remember that I ever saw more miserable creatures.

1st February, 1652. I dined at Abbeville; 2d, dined at Montreuil, lay at Boulogne; 3d, came to Calais, by eleven in the morning; I thought to have embarked in the evening, but, for fear of pirates plying near the coast, I dared not trust our small vessel, and stayed till Monday following, when two or three lusty vessels were to depart.

I brought with me from Paris Mr. Christopher Wase, sometime before made to resign his Fellowship in King's College, Cambridge, because he would not take the Covenant. He had been a soldier in Flanders, and came miserable to Paris. From his excellent learning, and some relation he had to Sir R. Browne, I bore his charges into England, and clad and provided for him, till he should find some better condition; and he was worthy of it. There came with us also Captain Griffith, Mr. Tyrell, brother to Sir Timothy Tyrell, of Shotover (near Oxford).

At Calais, I dined with my Lord Wentworth, and met with Mr. Heath, Sir Richard Lloyd, Captain Paine, and divers of our banished friends, of whom understanding that the Count de la Strade, Governor of Dunkirk, was in the town, who had bought my wife's picture, taken by pirates at sea the year before (my wife having sent it for me in England), as my Lord of Norwich had informed me at Paris, I made my address to him, who frankly told me that he had such a picture in his own bedchamber among other ladies, and how he came by it; seeming well pleased that it was his fortune to preserve it for me,

and he generously promised to send it to any friend I had at Dover; I mentioned a French merchant there and so took my leave.

6th February, 1652. I embarked early in the packet boat, but put my goods in a stouter vessel. It was calm, so that we got not to Dover till eight at night. I took horse for Canterbury, and lay at Rochester; next day, to Gravesend, took a pair of oars, and landed at Dover Court, where I stayed three days to refresh, and look after my packet and goods, sent by a stouter vessel. I went to visit my cousin, Richard Farnhawe, and divers other friends.

6th March, 1652. Saw the magnificent funeral of that arch-rebel, Ireton, carried in pomp from Tower of House to Westminster, accompanied with divers regiments of soldiers, horse and foot; then marched the mourners, General Cromwell (his father-in-law), his most parliament men, officers, and forty poor men in gowns, three led horses in housings of black cloth, two led in black velvet, and his charging horse, all covered over with embroidery and gold, on crimson velvet; then the gundens, on signs, four heralds, carrying the arms of the State (as they called it), namely, the red cross and Ireland, with the ensue, wreath, sword, spurs, etc.; next, a chariot canopied of black velvet, and six horses, in which was the corpse; the pall held up by the mourners on foot; the mace and sword, with other marks of his charge in his hand (where he died of the plague), carried before in black scarfs. Thus, in a grave pace, drums covered with cloth, soldiers reversing their arms, they proceeded through the streets in a very solemn manner. This Ireton was a stout rebel, and had been very bloody to the King's party, witness his severity at Colchester, when in cold blood he put to death these gallant gentlemen, Sir Charles Lucas and Sir George Lisle. My cousin, R. Farnhawe, came to visit me, and informed me of many considerable affairs. Sir Henry Herbert presented me with his brother, my Lord Cherbury's book, "*De Veritate*."

9th March, 1652. I went to Deptford, where I made preparation for my settlement, no more intending to go out of England, but endeavor a settled life, either in this or some other place, there being now so little appearance of any change for the better, all being entirely

in the rebels' hands; and this particular habitation and the estate contiguous to it (belonging to my father-in-law, actually in his Majesty's service) very much suffering for want of some friend to rescue it out of the power of the usurpers, so as to preserve our interest, and take some care of my other concerns, by the advice and endeavor of my friends I was advised to reside in it, and compound with the soldiers. This I was besides authorized by his Majesty to do, and encouraged with a promise that what was in lease from the Crown, if ever it pleased God to restore him, he would secure to us in fee farm. I had also addresses and cyphers, to correspond with his Majesty and Ministers abroad: upon all which inducements, I was persuaded to settle henceforth in England, having now run about the world, most part out of my own country, near ten years. I therefore now likewise meditated sending over for my wife, whom as yet I had left at Paris.

14th March, 1652. I went to Lowisham, where I heard an honest sermon on 1 Cor. ii. 5-7, being the first Sunday I had been at church since my return, it being now a rare thing to find a priest of the Church of England in a parish pulpit, most of which were filled with Independents and Fanatics.

15th March, 1652. I saw the "Diamond" and "Ruby" launched in the Dock at Deptford, carrying forty-eight brass cannon each; Cromwell and his grandees present, with great acclamations.

18th March, 1652. That worthy divine, Mr. Owen, of Eltham, a sequestered person, came to visit me.

19th March, 1652. Invited by Lady Gerrard, I went to London, where we had a great supper; all the vessels, which were innumerable, were of porcelain, she having the most ample and richest collection of that curiosity in England.

22d March, 1652. I went with my brother Evelyn to Wotton, to give him what directions I was able about his garden, which he was now desirous to put into some form; but for which he was to remove a mountain overgrown with huge trees and thicket, with a moat within ten yards of the house. This my brother immediately attempted, and that without great cost, for more than a hundred yards south, by digging down the mountain,

and flinging it into a rapid stream; it not only carried away the sand, etc., but filled up the moat, and leveled that noble area, where now the garden and fountain is. The first occasion of my brother making this alteration was my building the little retiring place between the great wood eastward next the meadow, where, some time after my father's death, I made a triangular pond, or little stew, with an artificial rock after my coming out of Flanders.

29th March, 1652. I heard that excellent prelate, the primate of Ireland (Jacobus Usher) preach in Lincoln's Inn, on Heb. iv. 16, encouraging of penitent sinners.

5th April, 1652. My brother George brought to Sayes Court Cromwells Act of Oblivion to all that would submit to the Government.

13th April, 1652. News was brought me that Lady Cotton, my brother George's wife was delivered of a son.

I was moved by a letter out of France to publish the letter which some time since I sent to Dean Cosin's proselyted son; but I did not conceive it convenient, for fear of displeasing her Majesty, the Queen.

15th April, 1652. I wrote to the Dean, touching my buying his library, which was one of the choicest collections of any private person in England.

The Count de Strade most generously and handsomely sent me the picture of my wife from Dunkirk, in a large tin case without any charge. It is of Mr. Bourdon, and is that which has the dog in it, and is to the knees, but it has been somewhat spoiled by washing it ignorantly with soapsuds.

25th April, 1652. I went to visit Alderman Kendrick, a fanatic Lord Mayor, who had married a relation of ours, where I met with a Captain who had been thirteen times to the East Indies.

29th April, 1652. Was that celebrated eclipse of the sun, so much threatened by the astrologers, and which had so exceedingly alarmed the whole nation that hardly any one would work, nor stir out of their houses. So ridiculously were they abused by knavish and ignorant star-gazers.

We went this afternoon to see the Queen's house at Greenwich, now given by the rebels to Bulstrode White-

locke, one of their unhappy counselors, and keeper of pretended liberties.

10th May, 1652. Passing by Smithfield, I saw a miserable creature burning, who had murdered her husband. I went to see some workmanship of that admirable artist, Reeves, famous for perspective, and turning curiosities in ivory.

29th May, 1652. I went to give order about a coach to be made against my wife's coming, being my first coach, the pattern whereof I brought out of Paris.

30th May, 1652. I went to obtain of my Lord Devonshire that my nephew, George, might be brought up with my young Lord, his son, to whom I was recommending Mr. Wase. I also inspected the manner of canleting silk and programs at one Monsieur La Dorées in Moor-fields, and thence to Colonel Morley, one of their Council of State, as then called, who had been my school-fellow, to request a pass for my wife's safe landing, and the goods she was to bring with her out of France; which he courteously granted, and did me many other kindnesses, that was a great matter in those days.

In the afternoon, at Charlton church, where I heard a Rabbinical sermon. Here is a fair monument in black marble of Sir Adam Newton, who built that fair house near it for Prince Henry, and where my noble friend, Sir Henry Newton, succeeded him.

3d June, 1652. I received a letter from Colonel Morley to the Magistrates and Searchers at Rye, to assist my wife at her landing, and show her all civility.

4th June, 1652. I set out to meet her now on her journey from Paris, after she had obtained leave to come out of that city, which had now been besieged some time by the Prince of Condé's army in the time of the rebellion, and after she had been now near twelve years from her own country, that is, since five years of age, at which time she went over. I went to Rye to meet her, where was an embargo on occasion of the late conflict with the Holland fleet, the two nations being now in war, and which made sailing very unsafe.

On Whit Sunday, I went to the church (which is a very fair one), and heard one of the canters, who dismissed the assembly rudely, and without any blessing. Here I stayed till the 10th with no small impatience, when I

walked over to survey the ruins of Winchelsea, that ancient cinq-port, which by the remains and ruins of ancient streets and public structures, discovers it to have been formerly a considerable and large city. There are to be seen vast caves and vaults, walls and towers, ruins of monasteries and of a sumptuous church, in which are some handsome monuments, especially of the Templars, buried just in the manner of those in the Temple at London. This place being now all in rubbish, and a few despicable hovels and cottages only standing, hath yet a Mayor. The sea, which formerly rendered it a rich and commodious port, has now forsaken it.

11th June, 1652. About four in the afternoon, being at bowls on the green, we discovered a vessel which proved to be that in which my wife was, and which got into the harbor about eight that evening, to my no small joy. They had been three days at sea, and escaped the Dutch fleet, through which they passed, taken for fishers, which was great good fortune, there being seventeen bales of furniture and other rich plunder, which I bless God came all safe to land, together with my wife, and my Lady Browne, her mother, who accompanied her. My wife being discomposed by having been so long at sea, we set not forth toward home till the 14th, when, hearing the smallpox was very rife in and about London, and Lady Browne having a desire to drink Tunbridge waters, I carried them thither, and stayed in a very sweet place, private and refreshing, and took the waters myself till the 23d, when I went to prepare for their reception, leaving them for the present in their little cottage by the Wells.

The weather being hot, and having sent my man on before, I rode negligently under favor of the shade, till, within three miles of Bromley, at a place called the Procession Oak, two cutthroats started out, and striking with long staves at the horse, and taking hold of the reins, threw me down, took my sword, and hauled me into a deep thicket, some quarter of a mile from the highway, where they might securely rob me, as they soon did. What they got of money, was not considerable, but they took two rings, the one an emerald with diamonds, the other an onyx, and a pair of buckles set with rubies and diamonds, which were of value, and

after all bound my hands behind me, and my feet, having before pulled off my boots; they then set me up against an oak, with most bloody threats to cut my throat if I offered to cry out, or make any noise; for they should be within hearing, I not being the person they looked for. I told them that if they had not basely surprised me they should not have had so easy a prize, and that it would teach me never to ride near a hedge, since, had I been in the midway, they dared not have adventured on me; at which they cocked their pistols, and told me they had long guns, too, and were fourteen companions. I begged for my onyx, and told them it being engraved with my arms would betray them; but nothing prevailed. My horse's bridle they slipped, and searched the saddle, which they pulled off, but let the horse graze, and then turning again bridled him and tied him to a tree, yet so as he might graze, and thus left me bound. My horse was perhaps not taken, because he was marked and cropped on both ears, and well known on that road. Left in this manner, grievously was I tormented with flies, ants, and the sun, nor was my anxiety little how I should get loose in that solitary place, where I could neither hear nor see any creature but my poor horse and a few sheep straggling in the copse.

After near two hours attempting, I got my hands to turn palm to palm, having been tied back to back, and then it was long before I could slip the cord over my wrists to my thumb, which at last I did, and then soon unbound my feet, and saddling my horse and roaming a while about, I at last perceived dust to rise, and soon after heard the rattling of a cart, toward which I made, and, by the help of two countrymen, I got back into the highway. I rode to Colonel Blount's, a great justiciary of the times, who sent out hue and cry immediately. The next morning, sore as my wrists and arms were, I went to London, and got 500 tickets printed and dispersed by an officer of Goldsmiths' Hall, and within two days had tidings of all I had lost, except my sword, which had a silver hilt, and some trifles. The rogues had pawned one of my rings for a trifle to a goldsmith's servant, before the tickets came to the shop, by which means they escaped; the other

ring was bought by a victualer, who brought it to a goldsmith, but he having seen the ticket seized the man. I afterward discharged him on his protestation of innocence. Thus did God deliver me from these villains, and not only so, but restored what they took, as twice before he had graciously done, both at sea and land, I mean when I had been robbed by pirates, and was in danger of a considerable loss at Amsterdam; for which, and many, many signal preservations, I am extremely obliged to give thanks to God my Savior.

25th June, 1652. After a drought of near four months, there fell so violent a tempest of hail, rain, wind, thunder, and lightning, as no man had seen the like in his age; the hail being in some places four or five inches about, broke all glass about London, especially at Deptford, and more at Greenwich.

29th June, 1652. I returned to Tunbridge, and again drank the water, till 10th of July.

We went to see the house of my Lord Clanrickarde at Summer hill, near Tunbridge (now given to that villain, Bradshawe, who condemned the King). 'Tis situated on an eminent hill, with a park; but has nothing else extraordinary.

4th July, 1652. I heard a sermon at Mr. Packer's chapel at Groomsbridge, a pretty melancholy seat, well wooded and watered. In this house was one of the French kings\* kept prisoner. The chapel was built by Mr. Packer's father, in remembrance of King Charles the First's safe return out of Spain.

9th July, 1652. We went to see Penshurst, the Earl of Leicester's, famous once for its gardens and excellent fruit, and for the noble conversation which was wont to meet there, celebrated by that illustrious person, Sir Philip Sidney, who there composed divers of his pieces. It stands in a park, is finely watered, and was now full of company, on the marriage of my old fellow-collegiate, Mr. Robert Smith, who married my Lady Dorothy Sidney, widow of the Earl of Sunderland.

One of the men who robbed me was taken; I was accordingly summoned to appear against him; and, on the

\*The Duke of Orleans, taken at the battle of Agincourt, 4 Hen. V., by Richard Waller, then owner of this place. See Hasted's "Kent," vol. i., p. 431.

12th, was in Westminster Hall, but not being bound over, nor willing to hang the fellow, I did not appear, coming only to save a friend's bail; but the bill being found, he was turned over to the Old Bailey. In the meantime, I received a petition from the prisoner, whose father I understood was an honest old farmer in Kent. He was charged, with other crimes, and condemned, but reprieved. I heard afterward that, had it not been for his companion, a younger man, he would probably have killed me. He was afterward charged with some other crime, but, refusing to plead, was pressed to death.

23d July, 1652. Came my old friend, Mr. Spencer, to visit me.

30th July, 1652. I took advice about purchasing Sir Richard's [Browne] interest of those who had bought Sayes Court.

1st August, 1652. Came old Jerome Lennier, of Greenwich, a man skilled in painting and music, and another rare musician, called Mell. I went to see his collection of pictures, especially those of Julio Romano, which surely had been the King's, and an Egyptian figure, etc. There were also excellent things of Polydore, Guido, Raphael, and Tintoretto. Lennier had been a domestic of Queen Elizabeth, and showed me her head, an intaglio in a rare sardonyx, cut by a famous Italian, which he assured me was exceedingly like her.

24th August, 1652. My first child, a son, was born precisely at one o'clock.

2d September, 1652. Mr. Owen, the sequestered divine, of Eltham, christened my son by the name of Richard.

22d September, 1652. I went to Woodcote, where Lady Browne was taken with scarlet fever, and died. She was carried to Deptford, and interred in the church near Sir Richard's relations with all decent ceremonies, and according to the church-office, for which I obtained permission, after it had not been used in that church for seven years. Thus ended an excellent and virtuous lady, universally lamented, having been so obliging on all occasions to those who continually frequented her house in Paris, which was not only an hospital, but an asylum to all our persecuted and afflicted countrymen, during eleven years' residence there in that honorable situation.

25th September, 1652. I went to see Dr. Mason's house, so famous for the prospect (for the house is a wretched one) and description of Barclay's "*Icon Animarum.*"\*

5th November, 1652. To London, to visit some friends, but the insolences were so great in the streets that I could not return till the next day.

Dr. Scarborough was instant with me to give the Tables of Veins and Arteries to the College of Physicians, pretending he would not only read upon them, but celebrate my curiosity as being the first who caused them to be completed in that manner, and with that cost; but I was not so willing yet to part with them, as to lend them to the College during their anatomical lectures; which I did accordingly.

22d November, 1652. I went to London, where was proposed to me the promoting that great work (since accomplished by Dr. Walton, Bishop of Chester), "*Biblia Polyglotta*," by Mr. Pierson, that most learned divine.

25th December, 1652. Christmas day, no sermon anywhere, no church being permitted to be open, so observed it at home. The next day, we went to Lewisham, where an honest divine preached.

31st December, 1652. I adjusted all accompts, and rendered thanks to Almighty God for his mercies to me the year past.

1st January, 1652-53. I set apart in preparation for the Blessed Sacrament, which the next day Mr. Owen administered to me and all my family in Sayes Court, preaching on John vi. 32, 33, showing the exceeding benefits of our blessed Savior taking our nature upon him. He had christened my son and churched my wife in our own house as before noticed.

17th January, 1653. I began to set out the oval garden at Sayes Court, which was before a rude orchard, and

\*The book here referred to is in the British Museum, entitled "*Joannis Barclaii Icon Animarum*," and printed at London, 1614, small 12mo. It is written in Latin, and dedicated to Louis XIII. of France, for what reason does not appear, the author speaking of himself as a subject of this country. It mentions the necessity of forming the minds of youth, as a skillful gardener forms his trees; the different dispositions of men, in different nations; English, Scotch, and Irish, etc. Chapter second contains a florid description of the beautiful scenery about Greenwich, but does not mention Dr. Mason, or his house.

all the rest one entire field of 100 acres, without any hedge, except the hither holly hedge joining to the bank of the mount walk. This was the beginning of all the succeeding gardens, walks, groves, inclosures, and plantations there.

21st January, 1653. I went to London, and sealed some of the writings of my purchase of Sayes Court.

30th January, 1653. At our own parish church, a stranger preached. There was now and then an honest orthodox man got into the pulpit, and, though the present incumbent was somewhat of the Independent, yet he ordinarily preached sound doctrine, and was a peaceable man; which was an extraordinary felicity in this age.

1st February, 1653. Old Alexander Rosse (author of "*Virgilius Evangelizans*," and many other little books) presented me with his book against Mr. Hobbes's "*Leviathan*."

19th February, 1653. I planted the orchard at Sayes Court; new moon, wind west.

22d February, 1653. Was perfected the sealing, livery, and seisin of my purchase of Sayes Court. My brother, George Glanville, Mr. Scudamore, Mr. Offley, Co. William Glanville (son to Sergeant Glanville, sometime Speaker of the House of Commons), Co. Stephens, and several of my friends dining with me. I had bargained for £3,200, but I paid £3,500.

25th March, 1653. Came to see me that rare graver in *taille-douce*, Monsieur Richett, he was sent by Cardinal Mazarine to make a collection of pictures.

11th April, 1653. I went to take the air in Hyde Park, where every coach was made to pay a shilling, and horse sixpence, by the sordid fellow who had purchased it of the state, as they called it.

17th May, 1653. My servant Hoare, who wrote those exquisite several hands, fell of a fit of an apoplexy, caused, as I suppose, by tampering with mercury about an experiment in gold.

29th May, 1653. I went to London, to take my last leave of my honest friend, Mr. Barton, now dying; it was a great loss to me and to my affairs. On the sixth of June, I attended his funeral.

8th June, 1653. Came my brother George, Captain Evelyn, the great traveler, Mr. Muschamp, my cousin,

Thomas Keightly, and a virtuoso, fastastical Simons, who had the talent of embossing so to the life.

9th June, 1653. I went to visit my worthy neighbor, Sir Henry Newton [at Charlton], and consider the prospect, which is doubtless for city, river, ships, meadows, hill, woods, and all other amenities, one of the most noble in the world; so as, had the house running water, it were a princely seat. Mr. Henshaw and his brother-in-law came to visit me, and he presented me with a seleniscope.

19th June, 1653. This day, I paid all my debts to a farthing; oh, blessed day!

21st June, 1653. My Lady Gerrard, and one Esquire Knight, a very rich gentleman, living in Northamptonshire, visited me.

23d June, 1653. Mr. Lombart, a famous graver, came to see my collections.

27th June, 1653. Monsieur Roupel sent me a small phial of his *aurum potabile*, with a letter, showing the way of administering it, and the stupendous cures it had done at Paris; but, ere it came to me, by what accident I know not, it was all run out.

17th August, 1653. I went to visit Mr. Hyldiard, at his house at Horsley (formerly the great Sir Walter Raleigh's\*), where met me Mr. Oughtred, the famous mathematician; he showed me a box, or golden case, of divers rich and aromatic balsams, which a chemist, a scholar of his, had sent him out of Germany.

21st August, 1653. I heard that good old man, Mr. Higham, the parson of the parish of Wotton where I was born, and who had baptized me, preach after his very plain way on Luke, comparing this troublesome world to the sea, the ministers to the fishermen, and the saints to the fish.

22d August, 1653. We all went to Guildford, to rejoice at the famous inn, the Red Lion, and to see the hospital, and the monument of Archbishop Abbot, the founder, who lies buried in the chapel of his endowment.

28th September, 1653. At Greenwich preached that holy martyr, Dr. Hewer, on Psalm xc. 11, magnifying the grace of God to penitents, and threatening the

\* Evelyn is here in error: Mr. Hyldiard was of East Horsley, Sir Walter of West.

extinction of his Gospel light for the prodigious impiety of the age.

11th October, 1653. My son, John Stansfield, was born, being my second child, and christened by the name of my mother's father, that name now quite extinct, being of Cheshire. Christened by Mr. Owen, in my library, at Sayes Court, where he afterward churched my wife, I always making use of him on these occasions, because the parish minister dared not have officiated according to the form and usage of the Church of England, to which I always adhered.

25th October, 1653. Mr. Owen preached in my library at Sayes Court on Luke xviii. 7, 8, an excellent discourse on the unjust judge, showing why Almighty God would sometimes be compared by such similitudes. He afterward administered to us all the Holy Sacrament.

28th October, 1653. Went to London, to visit my Lady Gerrard, where I saw that cursed woman called the Lady Norton, of whom it was reported that she spit in our King's face as he went to the scaffold. Indeed, her talk and discourse was like an impudent woman.

21st November, 1653. I went to London, to speak with Sir John Evelyn, my kinsman, about the purchase of an estate of Mr. Lambard's at Westeram, which afterward Sir John himself bought for his son-in-law, Leech.

4th December, 1653. Going this day to our church, I was surprised to see a tradesman, a mechanic, step up; I was resolved yet to stay and see what he would make of it. His text was from 2 Sam. xxiii. 20: "And Benaiah went down also and slew a lion in the midst of a pit in the time of snow"; the purport was, that no danger was to be thought difficult when God called for shedding of blood, inferring that now the saints were called to destroy temporal governments; with such feculent stuff; so dangerous a crisis were things grown to.

25th December, 1653. Christmas day. No churches, or public assembly. I was fain to pass the devotions of that Blessed day with my family at home.

20th January, 1653-54. Come to see my old acquaintance and the most incomparable player on the Irish harp, Mr. Clark,\* after his travels. He was an excellent musician, a discreet gentleman, born in Devonshire (as I re-

\*See under the year 1688, November.

member). Such music before or since did I never hear, that instrument being neglected for its extraordinary difficulty; but, in my judgment, far superior to the lute itself, or whatever speaks with strings.

25th January, 1654. Died my son, J. Stansfield, of convulsion fits; buried at Deptford on the the east corner of the church, near his mother's great-grandfather, and other relatives.

8th February, 1654. Ash Wednesday. In contradiction to all custom and decency, the usurper, Cromwell, feasted at the Lord Mayor's, riding in triumph through the city.

14th February, 1654. I saw a tame lion play familiarly with a lamb; he was a huge beast, and I thrust my hand into his mouth and found his tongue rough like a cat's; a sheep also with six legs, which made use of five of them to walk; a goose that had four legs, two crops, and as many vents.

29th March, 1654. That excellent man, Mr. Owen, preached in my library on Matt. xxviii. 6, a resurrection sermon, and after it we all received the Holy Communion.

6th April, 1654. Came my Lord Herbert, Sir Kenelm Digby, Mr. Denham, and other friends to see me.

15th April, 1654. I went to London to hear the famous Jeremy Taylor (since Bishop of Down and Connor) at St. Gregory's (near St. Paul's) on Matt. vi, 48, concerning evangelical perfection.

5th May, 1654. I bound my lackey, Thomas Headly, apprentice to a carpenter, giving with him five pounds and new clothing; he thrived very well, and became rich.

8th May, 1654. I went to Hackney, to see Lady Brook's garden, which was one of the neatest and most celebrated in England, the house well furnished, but a despicable building. Returning, visited one Mr. Tomb's garden; it has large and noble walks, some modern statues, a vineyard, planted in strawberry borders, staked at ten feet distances, the banqueting-house of cedar, where the couch and seats were carved *à l'antique*; some good pictures in the house, especially one of Vandyke's, being a man in his shirt; also some of Stenwyck. I also called at Mr. Ducie's, who has indeed a rare collection of the best masters, and one of the largest stories of H. Hol-

bein. I also saw Sir Thomas Fowler's aviary, which is a poor business.

10th May, 1654. My Lady Gerrard treated us at Mulberry Garden, now the only place of refreshment about the town for persons of the best quality to be exceedingly cheated at; Cromwell and his partisans having shut up and seized on Spring Garden, which, till now, had been the usual rendezvous for the ladies and gallants at this season.

11th May, 1654. I now observed how the women began to paint themselves, formerly a most ignominious thing, and used only by prostitutes.

14th May, 1654. There being no such thing as church anniversaries in the parochial assemblies, I was forced to provide at home for Whit Sunday.

15th May, 1654. Came Sir Robert Stapylton, the translator of "Juvenal," to visit me.

8th June, 1654. My wife and I set out in a coach and four horses, in our way to visit relations of hers in Wiltshire, and other parts, where we resolved to spend some months. We dined at Windsor, saw the Castle and Chapel of St. George, where they have laid our blessed Martyr, King Charles, in the VAULT JUST BEFORE THE ALTAR. The church and workmanship in stone is admirable. The Castle itself is large in circumference; but the rooms melancholy, and of ancient magnificence. The keep, or mount, hath, besides its incomparable prospect, a very profound well; and the terrace toward Eton, with the park, meandering Thames, and sweet meadows, yield one of the most delightful prospects. That night, we lay at Reading. Saw my Lord Craven's house at Causam [Caversham], now in ruins, his goodly woods felling by the Rebels.

9th June, 1654. Dined at Marlborough, which having been lately fired, was now new built. At one end of this town, we saw my Lord Seymour's house, but nothing observable save the Mount, to which we ascended by windings for near half a mile. It seems to have been cast up by hand. We passed by Colonel Pophams, a noble seat, park, and river. Thence, to Newbury, a considerable town, and Donnington, famous for its battle, siege, and castle, this last had been in the possession of old Geoffrey Chaucer. Then to Aldermaston, a house of Sir Humphrey Forster's, built *à la moderne*. Also, that exceedingly

beautiful seat of my Lord Pembroke, on the ascent of a hill, flanked with wood, and regarding the river, and so, at night, to Cadenham, the mansion of Edward Hungerford, Esq., uncle to my wife, where we made some stay. The rest of the week we did nothing but feast and make good cheer, to welcome my wife.

27th June, 1654. We all went to see Bath, where I bathed in the cross bath. Among the rest of the idle diversions of the town, one musician was famous for acting a changeling, which indeed he personated strangely.

The *facciata* of this cathedral is remarkable for its historical carving. The King's Bath is esteemed the fairest in Europe. The town is entirely built of stone, but the streets narrow, uneven and unpleasant. Here, we trifled and bathed, and intervisited with the company who frequent the place for health, till the 30th, and then went to Bristol, a city emulating London, not for its large extent, but manner of building, shops, bridge, traffic, exchange, market-place, etc. The governor showed us the castle, of no great concernment. The city wholly mercantile, as standing near the famous Severn, commodiously for Ireland, and the Western world. Here I first saw the manner of refining sugar and casting it into loaves, where we had a collection of eggs fried in the sugar furnace, together with excellent Spanish wine. But, what appeared most stupendous to me, was the rock of St. Vincent, a little distance from the town, the precipice whereof is equal to anything of that nature I have seen in the most confragose cataracts of the Alps, the river gliding between them at an extraordinary depth. Here, we went searching for diamonds, and to the Hot Wells, at its foot. There is also on the side of this horrid Alp a very romantic seat: and so we returned to Bath in the evening, and July 1st to Cadenham.

4th July, 1654. On a letter from my wife's uncle, Mr. Pretyman, I waited back on her to London, passing by Hungerford, a town famous for its trouts, and the next day arrived at Deptford, which was 60 miles, in the extremity of heat.

6th July, 1654. I went early to London, and the following day met my wife and company at Oxford, the eve of the Act.

8th July, 1654. Was spent in hearing several exercises in the schools; and, after dinner, the Proctor opened the Act at St. Mary's (according to custom), and the Prevaricators, their drollery. Then, the Doctors disputed. We supped at Wadham College.

9th June, 1654. Dr. French preached at St. Mary's, on Matt. xii. 42, advising the students the search after true wisdom, not to be had in the books of philosophers, but in the Scriptures alone. In the afternoon, the famous Independent, Dr. Owen, perstringing Episcopacy. He was now Cromwell's Vice-Chancellor. We dined with Dr. Ward, Mathematical Professor (since Bishop of Sarum), and at night supped in Baliol College Hall, where I had once been student and fellow-commoner, and where they made me extraordinarily welcome.

10th June, 1654. On Monday, I went again to the schools, to hear the several faculties, and in the afternoon carried out the whole Act in St. Mary's, the long speeches of the Proctors, the Vice-Chancellor, the several Professors, creation of Doctors, by the cap, ring, kiss, etc., those ancient ceremonies and institution being as yet not wholly abolished. Dr. Kendal, now Inceptor among others, performing his Act incomparably well, concluded it with an excellent oration, abating his Presbyterian animosities, which he withheld, not even against that learned and pious divine, Dr. Hammond. The Act was closed with the speech of the Vice-Chancellor, there being but four in theology, and three in medicine, which was thought a considerable matter, the times considered. I dined at one Monsieur Plat's, a student of Exeter College, and supped at a magnificent entertainment of Wadham Hall, invited by my dear and excellent friend, Dr. Wilkins, then Warden (after, Bishop of Chester).

11th July, 1654. Was the Latin sermon, which I could not be at, though invited, being taken up at All Souls, where we had music voices, and theorbos, performed by some ingenious scholars. After dinner, I visited that miracle of a youth, Mr. Christopher Wren, nephew to the Bishop of Ely. Then Mr. Barlow (since Bishop of Lincoln), bibliothecarius of the Bodleian Library, my most learned friend. He showed us the rarities of that most famous place, manuscripts, medals, and other curiosities. Among the MSS. an old English Bible, wherein

the Eunuch mentioned to be baptized by Philip, is called the Gelding: "and Philip and the Gelding went down into the water," etc. The original Acts of the Council of Basil 900 years since, with the *bullæ*, or leaden affix, which has a silken cord passing through every parchment; a MSS. of Venerable Bede of 800 years antiquity; the old Ritual *secundum usum Sarum* exceeding voluminous; then, among the nicer curiosities, the "Proverbs of Solomon," written in French by a lady, every chapter of a several character, or hand, the most exquisite imaginable; an hieroglyphical table, or carta, folded up like a map, I suppose it painted on asses' hide, extremely rare; but, what is most illustrious, there were no less than 1,000 MSS. in nineteen languages, especially Oriental, furnishing that new part of the library built by Archbishop Laud, from a design of Sir Kenelm Digby and the Earl of Pembroke. In the closet of the tower, they show some Indian weapons, urns, lamps, etc., but the rarest is the whole Alcoran, written on one large sheet of calico, made up in a priest's vesture, or cope, after the Turkish and Arabic character, so exquisitely written, as no printed letter comes near it; also, a roll of magical charms, divers talismans, and some medals.

Then, I led my wife into the Convocation House, finely wainscoted; the Divinity School, and Gothic carved roof; the Physic, or Anatomy School, adorned with some rarities of natural things; but nothing extraordinary save the skin of a jackal, a rarely-colored jackatoo, or prodigious large parrot, two humming birds, not much bigger than our bumblebee, which indeed I had not seen before, that I remember.

12th July, 1654. We went to St. John's, saw the library and the two skeletons, which are finely cleansed and put together; observable is here also the store of mathematical instruments, chiefly given by the late Archbishop Laud, who built here a handsome quadrangle.

Thence we went to New College, where the chapel was in its ancient garb, notwithstanding the scrupulosity of the times. Thence, to Christ's Church, in whose library was shown us an Office of Henry VIII., the writing, miniatures, and gilding whereof is equal, if not surpassing, any curiosity I had seen of that kind; it was given by their founder, Cardinal Wolsey. The glass win-

dows of the cathedral (famous in my time) I found much abused. The ample hall and column, that spreads its capital to sustain the roof as one goes up the stairs, is very remarkable.

Next we walked to Magdalen College, where we saw the library and chapel, which was likewise in pontifical order, the altar only I think turned tablewise, and there was still the double organ, which abominations (as now esteemed) were almost universally demolished; Mr. Gibbon, that famous musician, giving us a taste of his skill and talents on that instrument.

Hence, to the Physic Garden, where the sensitive plant was shown us for a great wonder. There grew canes, olive trees, rhubarb, but no extraordinary curiosities, besides very good fruit, which, when the ladies had tasted, we returned in our coach to our lodgings.

13th July, 1654. We all dined at that most obliging and universally-curious Dr. Wilkins's, at Wadham College. He was the first who showed me the transparent apiaries, which he had built like castles and palaces, and so ordered them one upon another, as to take the honey without destroying the bees. These were adorned with a variety of dials, little statues, vanes, etc.; and, he was so abundantly civil, finding me pleased with them, to present me with one of the hives which he had empty, and which I afterward had in my garden at Sayes Court, where it continued many years, and which his Majesty came on purpose to see and contemplate with much satisfaction. He had also contrived a hollow statue, which gave a voice and uttered words by a long, concealed pipe that went to its mouth,\* while one speaks through it at a good distance. He had, above in his lodgings and gallery, variety of shadows, dials, perspectives, and many other artificial, mathematical, and magical curiosities, a waywiser, a thermometer, a monstrous magnet, conic, and other sections, a balance on a demi-circle; most of them of his own, and that prodigious young scholar Mr. Christopher Wren, who presented me with a piece of white marble, which he had stained with a lively red, very deep, as beautiful as if it had been natural.

Thus satisfied with the civilities of Oxford, we left it,

\* Such were the speaking figures long ago exhibited in Spring Gardens, and in Leicester Fields.

dining at Farringdon, a town which had been newly fired during the wars; and, passing near the seat of Sir Walter Pye, we came to Cadenham.

16th July, 1654. We went to another uncle and relative of my wife's, Sir John Glanville, a famous lawyer, formerly Speaker of the House of Commons; his seat is at Broad Hinton, where he now lived but in the gatehouse, his very fair dwelling house having been burnt by his own hands, to prevent the rebels making a garrison of it. Here, my cousin William Glanville's eldest son showed me such a lock for a door, that for its filing, and rare contrivances was a masterpiece, yet made by a country blacksmith. But, we have seen watches made by another with as much curiosity as the best of that profession can brag of; and, not many years after, there was nothing more frequent than all sorts of ironwork more exquisitely wrought and polished than in any part of Europe, so as a door lock of a tolerable price was esteemed a curiosity even among foreign princes.

Went back to Cadenham, and, on the 19th, to Sir Edward Baynton's at Spie Park, a place capable of being made a noble seat; but the humorous old knight has built a long single house of two low stories on the precipice of an incomparable prospect, and landing on a bowling-green in the park. The house is like a long barn, and has not a window on the prospect side. After dinner, they went to bowls, and, in the meantime, our coachmen were made so exceedingly drunk, that in returning home we escaped great dangers. This, it seems, was by order of the knight, that all gentlemen's servants be so treated; but the custom is barbarous, and much unbecoming a knight still less a Christian.

20th July, 1654. We proceeded to Salisbury; the cathedral I take to be the most complete piece of Gothic work in Europe, taken in all its uniformity. The pillars, reputed to be cast, are of stone manifestly cut out of the quarry; most observable are those in the chapter house. There are some remarkable monuments, particularly the ancient Bishops, founders of the Church, Knights Templars, the Marquis of Hertford's, the cloisters of the palace and garden, and the great mural dial.

In the afternoon we went to Wilton, a fine house of the Earl of Pembroke, in which the most observable are

the dining room in the modern-built part toward the garden, richly gilded and painted with story, by De Crete; also some other apartments, as that of hunting landscapes, by Pierce; some magnificent chimney-pieces, after the best French manner; a pair of artificial winding stairs of stone, and divers rare pictures. The garden, heretofore esteemed the noblest in England, is a large handsome plain, with a grotto and waterworks, which might be made much more pleasant, were the river that passes through cleaned and raised; for all is effected by a mere force. It has a flower garden, not inelegant. But, after all, that which renders the seat delightful is, its being so near the downs and noble plains about the country contiguous to it. The stables are well ordered and yield a graceful front, by reason of the walks of lime trees, with the court and fountain of the stables adorned with the Cæsars' heads.

We returned this evening by the plain, and fourteen-mile race, where out of my lord's hare warren we were entertained with a long course of a hare for near two miles in sight. Near this, is a *pergola*, or stand, built to view the sports; and so we came to Salisbury, and saw the most considerable parts of the city. The market place, with most of the streets, are watered by a quick current and pure stream running through the middle of them, but are negligently kept, when with a small charge they might be purged and rendered infinitely agreeable, and this made one of the sweetest towns, but now the common buildings are despicable, and the streets dirty.

22d July, 1654. We departed and dined at a farm of my Uncle Hungerford's, called Darnford Magna, situated in a valley under the plain, most sweetly watered, abounding in trouts caught by spear in the night, when they come attracted by a light set in the stern of a boat.

After dinner, continuing our return, we passed over the goodly plain, or rather sea of carpet, which I think for evenness, extent, verdure, and innumerable flocks, to be one of the most delightful prospects in nature, and reminded me of the pleasant lives of shepherds we read of in romances.

Now we arrived at Stonehenge, indeed a stupendous monument, appearing at a distance like a castle; how so-

many and huge pillars of stone should have been brought together, some erect, others transverse on the tops of them, in a circular area as rudely representing a cloister or heathen and more natural temple, is wonderful. The stone is so exceedingly hard, that all my strength with a hammer could not break a fragment; which hardness I impute to their so long exposure. To number them exactly is very difficult, they lie in such variety of postures and confusion, though they seemed not to exceed 100; we counted only 95. As to their being brought thither, there being no navigable river near, is by some admired; but for the stone, there seems to be the same kind about 20 miles distant, some of which appear above ground. About the same hills, are divers mounts raised, conceived to be ancient intrenchments, or places of burial, after bloody fights. We now went by Devizes, a reasonable large town, and came late to Cadenham.

27th July, 1654. To the hunting of a sorel deer, and had excellent chase for four or five hours, but the venison little worth.

29th July, 1654. I went to Langford to see my Cousin Stephens. I also saw Dryfield, the house heretofore of Sir John Pretymen, grandfather to my wife, and sold by her uncle; both the seat and house very honorable and well built, much after the modern fashion.

31st July, 1654. Taking leave of Cadenham, where we had been long and nobly entertained, we went a compass into Leicestershire, where dwelt another relation of my wife's; for I indeed made these excursions to show her the most considerable parts of her native country, who, from her childhood, had lived altogether in France, as well as for my own curiosity and information.

About two miles before coming to Gloucester, we have a prospect from woody hills into a most goodly vale and country. Gloucester is a handsome city, considerable for the church and monuments. The minster is indeed a noble fabric. The whispering gallery is rare, being through a passage of twenty-five yards in a many-angled cloister, and was, I suppose, either to show the skill of the architect, or some invention of a cunning priest, who, standing unseen in a recess in the middle of the chapel,

might hear whatever was spoken at either end. This is above the choir, in which lies buried King Stephen\* under a monument of Irish oak, not ill carved considering the age. The new library is a noble though a private design. I was likewise pleased with the Severn gliding so sweetly by it. The Duke's house, the castle works, are now almost quite dismantled; nor yet without sad thoughts did I see the town, considering how fatal the siege had been a few years before to our good King.

1st August, 1654. We set out toward Worcester, by a way thickly planted with cider fruit. We deviated to the Holy Wells, trickling out of a valley through a steep declivity toward the foot of the great Malvern Hills; they are said to heal many infirmities, as king's evil, leprosy, sore eyes, etc. Ascending a great height above them to the trench dividing England from South Wales, we had the prospect of all Herefordshire, Radnor, Brecknock, Monmouth, Worcester, Gloucester, Shropshire, Warwick, Derbyshires, and many more. We could discern Tewkesbury, King's road, toward Bristol, etc.; so as I esteem it one of the goodliest vistas in England.

2d August, 1654. This evening we arrived at Worcester, the Judges of Assize and Sheriff just entering as we did. Viewing the town the next day, we found the Cathedral much ruined by the late wars, otherwise a noble structure. The town is neatly paved and very clean, the goodly river Severn running by it, and standing in a most fertile country.

3d August, 1654. We passed next through Warwick, and saw the castle, the dwelling house of the Lord Brook, and the furniture noble. It is built on an eminent rock which gives prospect into a most goodly green, a woody and plentifully watered country; the river running so delightfully under it, that it may pass for one of the most surprising seats one should meet with. The gardens are prettily disposed; but might be much improved. Here they showed us Sir Guy's great two-handed sword, staff, horse-arms, pot, and other relics of that famous knight-errant. Warwick is a fair old town, and hath one church full of ancient monuments.

Having viewed these, I went to visit my worthy friend,

\*King Stephen was buried at Faversham. The effigy Evelyn alluded to is that of Robert Curthose, Duke of Normandy.

Sir H. Puckering, at the Abbey, and though a melancholy old seat, yet in a rich soil.

Hence to Sir Guy's grot, where they say he did his penances, and died. It is a squalid den made in the rock, crowned yet with venerable oaks and looking on a goodly stream, so as, were it improved as it might be, it were capable of being made a most romantic and pleasant place. Near this, we were showed his chapel and gigantic statue hewn out of the solid rock, out of which there are likewise divers other caves cut, and some very capacious.

The next place to Coventry. The cross is remarkable for Gothic work and rich gilding, comparable to any I had ever seen, except that of Cheapside in London, now demolished. This city has many handsome churches, a beautiful wall, a fair free school and library to it; the streets full of great shops, clean and well paved. At going forth the gate, they show us the bone, or rib, of a wild boar, said to have been killed by Sir Guy, but which I take to be the chine of a whale.

4th August, 1654. Hence, riding through a considerable part of Leicestershire, an open, rich, but unpleasant country, we came late in the evening to Horninghold, a seat of my wife's uncle.

7th August, 1654. Went to Uppingham, the shire town of Rutland, pretty and well built of stone, which is a rarity in that part of England, where most of the rural parishes are but of mud; and the people living as wretchedly as in the most impoverished parts of France, which they much resemble, being idle and sluttish. The country (especially Leicestershire) much in common; the gentry free drinkers.

9th August, 1654. To the old and ragged city of Leicester, large and pleasantly seated, but despicably built, the chimney flues like so many smiths' forges; however, famous for the tomb of the tyrant, Richard III., which is now converted to a cistern, at which (I think) cattle drink. Also, here in one of the churches lies buried the magnificent Cardinal Wolsey. John of Gaunt has here also built a large but poor hospital, near which a wretch has made him a house out of the ruins of a stately church. Saw the ruins of an old Roman Temple, thought to be of Janus. Entertained at a very fine collection of fruits, such as I did not expect to meet with

so far North, especially very good melons. We returned to my uncle's.

14th August, 1654. I took a journey into the Northern parts, riding through Oakham, a pretty town in Rutlandshire, famous for the tenure of the Barons (Ferrers), who hold it by taking off a shoe from every nobleman's horse that passes with his lord through the street, unless redeemed with a certain piece of money. In token of this, are several gilded shoes nailed up on the castle gate, which seems to have been large and fair. Hence, we went by Brook, a very sweet seat and park of the old Lady Camden's. Next, by Burleigh House, belonging to the Duke of Buckingham, and worthily reckoned among the noblest seats in England, situate on the brow of a hill, built *à la moderne* near a park walled in, and a fine wood at the descent.

Now we were come to Cottamore, a pretty seat belonging to Mr. Heath, son of the late Lord Chief Justice of that name. Here, after dinner, parting with the company that conducted us thus far, I passed that evening by Belvoir Castle, built on a round mount at the point of a long ridge of hills, which affords a stately prospect, and is famous for its strenuous resistance in the late civil war.

Went by Newark-on-Trent, a brave town and garrison. Next, by Wharton House, belonging to the Lord Chaworth, a handsome seat; then by Home, a noble place belonging to the Marquis of Dorchester, and passed the famous river Trent, which divides the South from the North of England; and so lay that night at Nottingham.

This whole town and county seems to be but one entire rock, as it were, an exceedingly pleasant shire, full of gentry. Here, I observed divers to live in the rocks and caves, much after the manner as about Tours, in France. The church is well built on an eminence; there is a fair house of the Lord Clare's, another of Pierrepont's; an ample market place; large streets, full of crosses; the relics of an ancient castle, hollowed beneath which are many caverns, especially that of the Scots' King, and his work while there.

This place is remarkable for being the place where his Majesty first erected his standard at the beginning

of our late unhappy differences. The prospects from this city toward the river and meadows are most delightful.

15th August, 1654. We passed next through Sherwood Forest, accounted the most extensive in England. Then, Paplewick, an incomparable vista with the pretty castle near it. Thence, we saw Newstead Abbey, belonging to the Lord Byron, situated much like Fontainebleau in France, capable of being made a noble seat, accommodated as it is with brave woods and streams; it has yet remaining the front of a glorious abbey church. Next, by Mansfield town; then Welbeck, the house of the Marquis of Newcastle, seated in a bottom in a park, and environed with woods, a noble yet melancholy seat. The palace is a handsome and stately building. Next to Worksop Abbey, almost demolished; the church has a double flat tower entire, and a pretty gate. The manor belongs to the Earl of Arundel, and has to it a fair house at the foot of a hill in a park that affords a delicate prospect. Tickel, a town and castle, has a very noble prospect. All these in Nottinghamshire.

16th August, 1654. We arrived at Doncaster, where we lay this night; it is a large fair town, famous for great wax lights, and good stockings.

17th August, 1654. Passed through Pontefract; the castle famous for many sieges both of late and ancient times, and the death of that unhappy King murdered in it (Richard II.), was now demolishing by the Rebels; it stands on a mount, and makes a goodly show at a distance. The Queen has a house here, and there are many fair seats near it, especially Mr. Pierrepont's, built at the foot of a hill out of the castle ruins. We all alighted in the highway to drink at a crystal spring, which they call Robin Hood's Well; near it, is a stone chair, and an iron ladle to drink out of, chained to the seat. We rode to Tadcaster, at the side of which we have prospect of the Archbishop's Palace (which is a noble seat), and in sight of divers other gentlemen's fair houses. This tract is a goodly, fertile, well-watered, and wooded country, abounding with pasture and plenty of provisions.

To York, the second city of England, fairly walled, of a circular form, watered by the brave river Ouse, bearing vessels of considerable burden on it; over it is a

stone bridge emulating that of London, and built on; the middle arch is larger than any I have seen in England, with a wharf of hewn stone, which makes the river appear very neat. But most remarkable and worth seeing is St. Peter's Cathedral, which of all the great churches in England had been best preserved from the fury of the sacrilegious, by composition with the Rebels when they took the city, during the many incursions of Scotch and others. It is a most entire magnificent piece of Gothic architecture. The screen before the choir is of stone carved with flowers, running work and statues of the old kings. Many of the monuments are very ancient. Here, as a great rarity in these days and at this time, they showed me a Bible and Common Prayer Book covered with crimson velvet, and richly embossed with silver gilt; also a service for the altar of gilt wrought plate, flagons, basin, ewer, plates, chalices, patins, etc., with a gorgeous covering for the altar and pulpit, carefully preserved in the vestry, in the hollow wall whereof rises a plentiful spring of excellent water. I got up to the tower, whence we had a prospect toward Durham, and could see Ripon, part of Lancashire, the famous and fatal Marston Moor, the Spas of Knaresborough, and all the environs of that admirable country. Sir — Ingoldsby has here a large house, gardens, and tennis court; also the King's house and church near the castle, which was modernly fortified with a palisade and bastions. The streets are narrow and ill-paved, the shops like London.

18th August, 1654. We went to Beverley, a large town with two stately churches, St. John's and St. Mary's, not much inferior to the best of our cathedrals. Here a very old woman showed us the monuments, and, being above 100 years of age, spoke the language of Queen Mary's days, in whose time she was born; she was widow of a sexton who had belonged to the church a hundred years.

Hence, we passed through a fenny but rich country to Hull, situated like Calais, modernly and strongly fortified with three block-houses of brick and earth. It has a good market place and harbor for ships. Famous also (or rather infamous) is this town for Hotham's refusing entrance to his Majesty. The water-house is worth seeing. And here ends the south of Yorkshire.

19th August, 1654. We pass the Humber, an arm of the sea of about two leagues breadth. The weather was bad, but we crossed it in a good barge to Barton, the first town in that part of Lincolnshire. All marsh ground till we came to Brigg, famous for the plantations of licorice, and then had brave pleasant riding to Lincoln, much resembling Salisbury Plain. Lincoln is an old confused town, very long, uneven, steep, and ragged; formerly full of good houses, especially churches and abbeyes. The Minster almost comparable to that of York itself, abounding with marble pillars, and having a fair front (herein was interred Queen Eleanor, the loyal and loving wife who sucked the poison out of her husband's wound); the abbot founder, with rare carving in the stone; the great bell, or Tom, as they call it. I went up the steeple, from whence is a goodly prospect all over the country. The soldiers had lately knocked off most of the brasses from the gravestones, so as few inscriptions were left; they told us that these men went in with axes and hammers, and shut themselves in, till they had rent and torn off some barge loads of metal, not sparing even the monuments of the dead; so hellish an avarice possessed them: beside which, they exceedingly ruined the city.

Here, I saw a tall woman six feet two inches high, comely, middle-aged, and well-proportioned, who kept a very neat and clean alehouse, and got most by people's coming to see her on account of her height.

20th August, 1654. From hence we had a most pleasant ride over a large heath open like Salisbury Plain, to Grantham, a pretty town, so well situated on the side of a bottom which is large and at a distance environed with ascending grounds, that for pleasure I consider it comparable to most inland places of England; famous is the steeple for the exceeding height of the shaft, which is of stone.

About eighteen miles south, we pass by a noble seat, and see Boston at a distance. Here, we came to a parish of which the parson had tithe ale.

Thence through Rutland, we brought night to Horninghold, from whence I set out on this excursion.

22d August, 1654. I went a setting and hawking, where we had tolerable sport.

25th August, 1654. To see Kirby, a very noble house of my Lord Hatton's, in Northamptonshire, built *à la moderne*; the garden and stables agreeable, but the avenue ungraceful, and the seat naked: returned that evening.

27th August, 1654. Mr. Allington preached an excellent discourse from Romans vi. 19. This was he who published those bold sermons of the members warring against the mind, or the Jews crucifying Christ, applied to the wicked regicides; for which he was ruined. We had no sermon in the afternoon.

30th August, 1654. Taking leave of my friends, who had now feasted me more than a month, I, with my wife, etc., set our faces toward home, and got this evening to Peterborough, passing by a stately palace (Thorpe) of St. John's (one deep in the blood of our good king), built out of the ruins of the Bishop's palace and cloister. The church is exceeding fair, full of monuments of great antiquity. Here lies Queen Catherine, the unhappy wife of Henry VIII., and the no less unfortunate Mary, Queen of Scots. On the steeple, we viewed the fens of Lincolnshire, now much inclosed and drained with infinite expense, and by many sluices, cuts, mounds, and ingenious mills, and the like inventions; at which the city and country about it consisting of a poor and very lazy sort of people, were much displeased.

Peterborough is a handsome town, and hath another well-built church.

31st August, 1654. Through part of Huntingdonshire, we passed that town, fair and ancient, a river running by it. The country about it so abounds in wheat that, when any King of England passes through it, they have a custom to meet him with a hundred plows.

This evening, to Cambridge; and went first to St. John's College, well built of brick, and library, which I think is the fairest of that University. One Mr. Benlowes has given it all the ornaments of *pietra commessa*,\* whereof a table and one piece of perspective is very fine; other trifles there also be of no great value, besides a vast old song-book, or Service, and some fair manuscripts. There hangs in the library the picture of John

\* Marble, inlaid of various colors, representing flowers, birds, etc.

Williams, Archbishop of York, sometime Lord Keeper, my kinsman, and their great benefactor.

Trinity College is said by some to be the fairest quadrangle of any university in Europe; but in truth is far inferior to that of Christ Church, in Oxford; the hall is ample and of stone, the fountain in the quadrangle is graceful, the chapel and library fair. There they showed us the prophetic manuscript of the famous Grebner, but the passage and emblem which they would apply to our late King, is manifestly relating to the Swedish; in truth, it seems to be a mere fantastic rhapsody, however the title may bespeak strange revelations. There is an office in manuscript with fine miniatures, and some other antiquities, given by the Countess of Richmond, mother of Henry VIII., and the before-mentioned Archbishop Williams, when Bishop of Lincoln. The library is pretty well stored. The Greek Professor had me into another large quadrangle cloistered and well built, and gave us a handsome collation in his own chamber.

Thence to Caius, and afterward to King's College, where I found the chapel altogether answered expectation, especially the roof, all of stone, which for the flatness of its laying and carving may, I conceive, vie with any in Christendom. The contignation of the roof (which I went upon), weight, and artificial joining of the stones is admirable. The lights are also very fair. In one aisle lies the famous Dr. Collins, so celebrated for his fluency in the Latin tongue. From this roof we could descry Ely, and the encampment of Sturbridge fair now beginning to set up their tents and booths; also Royston, Newmarket, etc., houses belonging to the King. The library is too narrow.

Clare-Hall is of a new and noble design, but not finished.

Peter-House, formerly under the government of my worthy friend, Dr. Joseph Cosin, Dean of Peterborough; a pretty neat college, having a delicate chapel. Next to Sidney, a fine college.

Catherine-Hall, though a mean structure, is yet famous for the learned Bishop Andrews, once Master. Emanuel College, that zealous house, where to the hall they have a parlor for the Fellows. The chapel is reformed, *ab origine*, built north and south, and meanly erected, as is the library.

Jesus-College, one of the best built, but in a melancholy situation. Next to Christ-College, a very noble erection, especially the modern part, built without the quadrangle toward the gardens, of exact architecture.

The Schools are very despicable, and Public Library but mean, though somewhat improved by the wainscoting and books lately added by the Bishop Bancroft's library and MSS. They showed us little of antiquity, only King James's Works, being his own gift, and kept very reverently.

The market place is very ample, and remarkable for old Hobson, the pleasant carrier's beneficence of a fountain.\* But the whole town is situate in a low, dirty, unpleasant place, the streets ill-paved, the air thick and infected by the fens, nor are its churches, (of which St. Mary's is the best) anything considerable in compare to Oxford.†

From Cambridge, we went to Audley-End, and spent some time in seeing that goodly place built by Howard, Earl of Suffolk, once Lord Treasurer. It is a mixed fabric, between antique and modern, but observable for its being completely finished, and without comparison is one of the stateliest palaces in the kingdom. It consists of two courts, the first very large, winged with cloisters. The front had a double entrance; the hall is fair, but somewhat too small for so august a pile. The kitchen is very large, as are the cellars, arched with stone, very neat and well disposed; these offices are joined by a wing out of the way very handsomely. The gallery is the most cheerful and I think one of the best in England; a fair dining-room, and the rest of the lodgings answerable, with a pretty chapel. The gardens are not in order, though well inclosed. It has also a bowling-alley, a noble well-walled, wooded and watered park, full of fine *collines* and ponds: the river glides before the palace, to which is an avenue of lime trees, but all this is much diminished by its being placed in an obscure bottom. For the rest, is a perfectly uniform structure, and shows without like a diadem, by the decorations of the cupolas and other ornaments on the pavilions; instead of rails and balusters, there is a border of capital letters, as was

\* A conduit it should rather be called.

† The reader must remember that an Oxford man is speaking.

lately also on Suffolk-House, near Charing-Cross, built by the same Lord Treasurer.

This house stands in the parish of Saffron Walden, famous for the abundance of saffron there cultivated, and esteemed the best of any foreign country.

3d October, 1654. Having dined here, we passed through Bishop Stortford, a pretty watered town, and so by London, late home to Sayes Court, after a journey of 700 miles, but for the variety an agreeable refreshment after my turmoil and building.

10th October, 1654. To my brother at Wotton, who had been sick.

14th October, 1654. I went to visit my noble friend Mr. Hyldiard, where I met that learned gentleman, my Lord Aungier, and Dr. Stokes, one of his Majesty's chaplains.

15th October, 1654. To Betchworth Castle, to Sir Ambrose Browne, and other gentlemen of my sweet and native country.

24th October, 1654. The good old parson, Higham, preached at Wotton Church: a plain preacher, but innocent and honest man.

23d November, 1654. I went to London, to visit my cousin Fanshawe, and this day I saw one of the rarest collections of agates, onyxes, and intaglios, that I had ever seen either at home or abroad, collected by a conceited old hatmaker in Blackfriars, especially one agate vase, heretofore the great Earl of Leicester's.

28th November, 1654. Came Lady Langham, a kinswoman of mine, to visit us; also one Captain Cooke, esteemed the best singer, after the Italian manner, of any in England; he entertained us with his voice and theorbo.

30th November, 1654. My birthday, being the 34th year of my age: blessing God for his providence, I went to London to visit my brother.

3d December 1654. Advent Sunday. There being no Office at the church but extemporary prayers after the Presbyterian way, for now all forms were prohibited, and most of the preachers were usurpers, I seldom went to church upon solemn feasts; but, either went to London, where some of the orthodox sequestered divines did privately use the Common Prayer, administer sacraments,

etc., or else I procured one to officiate in my house; wherefore, on the 10th, Dr. Richard Owen, the sequestered minister of Eltham, preached to my family in my library, and gave us the Holy Communion.

25th December, 1654. Christmas day. No public offices in churches, but penalties on observers, so as I was constrained to celebrate it at home.

1st January, 1654-55. Having with my family performed the public offices of the day, and begged a blessing on the year I was now entering, I went to keep the rest of Christmas at my brother's, R. Evelyn, at Woodcot.

19th January, 1655. My wife was brought to bed of another son, being my third, but second living. Christened on the 26th by the name of John.

28th January, 1655. A stranger preached from Colossians iii. 2, inciting our affections to the obtaining heavenly things. I understood afterward that this man had been both chaplain and lieutenant to Admiral Penn, using both swords; whether ordained or not I cannot say; into such times were we fallen!

24th February, 1655. I was showed a table clock whose balance was only a crystal ball, sliding on parallel wires, without being at all fixed, but rolling from stage to stage till falling on a spring concealed from sight, it was thrown up to the utmost channel again, made with an imperceptible declivity, in this continual vicissitude of motion prettily entertaining the eye every half minute, and the next half giving progress to the hand that showed the hour, and giving notice by a small bell, so as in 120 half minutes, or periods of the bullet's falling on the ejaculatory spring, the clock part struck. This very extraordinary piece (richly adorned) had been presented by some German prince to our late king, and was now in the possession of the usurper; valued at £200.

2d March, 1655. Mr. Simpson, the King's jeweler, showed me a most rich agate cup, of an escalop-shape, and having a figure of Cleopatra at the scroll, her body, hair, mantle, and veil, of the several natural colors. It was supported by a half Mark Antony, the colors rarely natural, and the work truly antique, but I conceived they were of several pieces; had they been all of one stone, it were invaluable.

18th March, 1655. Went to London, on purpose to

hear that excellent preacher, Dr. Jeremy Taylor, on Matt. xiv. 17, showing what were the conditions of obtaining eternal life; also, concerning abatements for unavoidable infirmities, how cast on the accounts of the cross. On the 31st, I made a visit to Dr. Jeremy Taylor, to confer with him about some spiritual matters, using him thenceforward as my ghostly father. I beseech God Almighty to make me ever mindful of, and thankful for, his heavenly assistances!

2d April, 1655. This was the first week, that, my uncle Pretymán being parted with his family from me, I began housekeeping, till now sojourning with him in my own house.

9th April, 1655. I went to see the great ship newly built by the usurper, Oliver, carrying ninety-six brass guns, and 1,000 tons burden. In the prow was Oliver on horseback, trampling six nations under foot, a Scot, Irishman, Dutchman, Frenchman, Spaniard, and English, as was easily made out by their several habits. A Fame held a laurel over his insulting head; the word, GOD WITH US.

15th April, 1655. I went to London with my family, to celebrate the feast of Easter. Dr. Wild preached at St. Gregory's; the ruling Powers conniving at the use of the Liturgy, etc., in the church alone. In the afternoon, Mr. Pierson (since Bishop of Chester) preached at Eastcheap, but was disturbed by an alarm of fire, which about this time was very frequent in the city.

29th May, 1655. I sold Preston to Colonel Morley.

17th June, 1655. There was a collection for the persecuted churches and Christians in Savoy, remnants of the ancient Albigenes.

3d July, 1655. I was shown a pretty Terella, described with all the circles, and showing all the magnetic deviations.

14th July, 1655. Came Mr. Pratt, my old acquaintance at Rome, also Sir Edward Hales, Sir Joseph Tufton, with Mr. Seymour.

1st August, 1655. I went to Dorking, to see Mr. Charles Howard's amphitheater, garden, or solitary recess, being fifteen acres environed by a hill. He showed us divers rare plants, caves, and an elaboratory.

10th August, 1655. To Albury, to visit Mr. Howard, who had begun to build, and alter the gardens much. He showed me many rare pictures, particularly the Moor

on horseback; Erasmus, as big as the life, by Holbein; a Madonna, in miniature, by Oliver; but, above all, the skull, carved in wood, by Albert Durer, for which his father was offered £100; also Albert's head, by himself, with divers rare agates, intaglios, and other curiosities.

21st August, 1655. I went to Ryegate, to visit Mrs. Cary, at my Lady Peterborough's, in an ancient monastery well in repair, but the park much defaced; the house is nobly furnished. The chimney-piece in the great chamber, carved in wood, was of Henry VIII., and was taken from a house of his in Bletchingley. At Ryegate, was now the Archbishop of Armagh, the learned James Usher, whom I went to visit. He received me exceeding kindly. In discourse with him, he told me how great the loss of time was to study much the Eastern languages; that, excepting Hebrew, there was little fruit to be gathered of exceeding labor; that, besides some mathematical books, the Arabic itself had little considerable; that the best text was the Hebrew Bible; that the Septuagint was finished in seventy days, but full of errors, about which he was then writing; that St. Hierome's was to be valued next the Hebrew; also that the seventy translated the Pentateuch only, the rest was finished by others; that the Italians at present understood but little Greek, and Kircher was a mountebank; that Mr. Selden's best book was his "Titles of Honor"; that the church would be destroyed by sectaries, who would in all likelihood bring in Popery. In conclusion he recommended to me the study of philology, above all human studies; and so, with his blessing, I took my leave of this excellent person, and returned to Wotton.

27th August, 1655. I went to Boxhill, to see those rare natural bowers, cabinets, and shady walks in the box copses: hence we walked to Mickleham, and saw Sir F. Stidolph's seat, environed with elm trees and walnuts innumerable, and of which last he told us they received a considerable revenue. Here are such goodly walks and hills shaded with yew and box, as render the place extremely agreeable, it seeming from these evergreens to be summer all the winter.

28th August, 1655. Came that renowned mathematician, Mr. Oughtred, to see me, I sending my coach to bring him to Wotton, being now very aged. Among other discourse,

he told me he thought water to be the philosopher's first matter, and that he was well persuaded of the possibility of their elixir; he believed the sun to be a material fire, the moon a continent, as appears by the late selenographers; he had strong apprehensions of some extraordinary event to happen the following year, from the calculation of coincidence with the diluvian period; and added that it might possibly be to convert the Jews by our Savior's visible appearance, or to judge the world; and therefore, his word was, "*Parate in occursus*"; he said original sin was not met with in the Greek Fathers, yet he believed the thing; this was from some discourse on Dr. Taylor's late book, which I had lent him.

16th September, 1655. Preached at St. Gregory's one Darnel, on Psalm iv. 4, concerning the benefit of self-examination; more learning in so SHORT A TIME AS AN HOUR I have seldom heard.

17th September, 1655. Received £2,600 of Mr. Hurt, for the Manor of Warley Magna, in Essex, purchased by me some time since. The taxes were so intolerable that they ate up the rents, etc., surcharged as that county had been above all others during our unnatural war.

19th September, 1655. Came to see me Sir Edward Hales, Mr. Ashmole, Mr. Harlakenton, and Mr. Thornhill: and, the next day, I visited Sir Henry Newton at Charlton, where I met the Earl of Winchelsea and Lady Beauchamp, daughter to the Lord Capel.

On Sunday afternoon, I frequently staid at home to catechize and instruct my family, those exercises universally ceasing in the parish churches, so as people had no principles, and grew very ignorant of even the common points of Christianity; all devotion being now placed in hearing sermons and discourses of speculative and national things.

26th September, 1655. I went to see Colonel Blount's subterranean warren, and drank of the wine of his vineyard, which was good for little.

30th September, 1655. Sir Nicholas Crisp came to treat with me about his vast design of a mole to be made for ships in part of my grounds at Sayes Court.

3d November, 1655. I had accidentally discourse with a Persian and a Greek concerning the devastation of Poland by the late incursion of the Swedes.

27th November, 1655. To London about Sir Nicholas Crisp's designs.

I went to see York House and gardens, belonging to the former great Buckingham, but now much ruined through neglect.

Thence, to visit honest and learned Mr. Hartlib, a public spirited and ingenious person, who had propagated many useful things and arts. He told me of the castles which they set for ornament on their stoves in Germany (he himself being a Lithuanian, as I remember), which are furnished with small ordnance of silver on the battlements, out of which they discharge excellent perfumes about the rooms, charging them with a little powder to set them on fire, and dispense the smoke: and in truth no more than need, for their stoves are sufficiently nasty. He told me of an ink that would give a dozen copies, moist sheets of paper being pressed on it; and remain perfect; and a receipt how to take off any print without the least injury to the original. This gentleman was master of innumerable curiosities, and very communicative. I returned home that evening by water; and was afflicted for it with a cold that had almost killed me.

This day, came forth the Protector's Edict, or Proclamation, prohibiting all ministers of the Church of England from preaching or teaching any schools, in which he imitated the apostate, Julian; with the decimation of all the royal party's revenues throughout England.

14th December, 1655. I visited Mr. Hobbes, the famous philosopher of Malmesbury, with whom I had been long acquainted in France.

Now were the Jews admitted.

25th December, 1655. There was no more notice taken of Christmas-day in churches.

I went to London, where Dr. Wild preached the funeral sermon of Preaching, this being the last day; after which Cromwell's proclamation was to take place, that none of the Church of England should dare either to preach, or administer Sacraments, teach schools, etc., on pain of imprisonment, or exile. So this was the most mournful day that in my life I had seen, or the Church of England herself, since the Reformation; to the great rejoicing of both Papist and Presbyterian.\* So pathetic

\*The text was 2 Cor. xiii. 9. That, however persecution dealt

was his discourse, that it drew many tears from the auditory. Myself, wife, and some of our family, received the Communion, God make me thankful, who hath hitherto provided for us the food of our souls as well as bodies! The Lord Jesus pity our distressed Church, and bring back the captivity of Zion!

5th January, 1655-56. Came to visit me my Lord Lisle, son to the Earl of Leicester, with Sir Charles Ouseley, two of the Usurper's council; Mr. John Hervey, and John Denham, the poet.

18th January, 1656. Went to Eltham on foot, being a great frost, but a mist falling as I returned, gave me such a rheum as kept me within doors near a whole month after.

5th February, 1656. Was shown me a pretty perspective and well represented in a triangular box, the great Church of Haarlem in Holland, to be seen through a small hole at one of the corners, and contrived into a handsome cabinet. It was so rarely done, that all the artists and painters in town flocked to see and admire it,

10th February, 1656. I heard Dr. Wilkins preach before the Lord Mayor in St. Paul's, showing how obedience was preferable to sacrifice. He was a most obliging person, who had married the Protector's sister, and took great pains to preserve the Universities from the ignorant, sacrilegious commanders and soldiers, who would fain have demolished all places and persons that pretended to learning.

11th February, 1656. I ventured to go to Whitehall, where of many years I had not been, and found it very glorious and well furnished, as far as I could safely go, and was glad to find they had not much defaced that rare piece of Henry VII., etc., done on the walls of the King's privy chamber.

14th February, 1656. I dined with Mr. Berkeley, son of Lord Berkeley, of Berkeley Castle, where I renewed my acquaintance with my Lord Bruce, my fellow-traveler in Italy.

19th February, 1656. Went with Dr. Wilkins to see Barlow, the famous painter of fowls, beasts, and birds.

with the Ministers of God's Word, they were still to pray for the flock, and wish their perfection, as it was the flock to pray for and assist their pastors, by the example of St. Paul.—EVELYN'S NOTE.

March, 1656. This night I was invited by Mr. r L'Estrange to hear the incomparable Lubicer on violin. His variety on a few notes and plain ground, that wonderful dexterity, was admirable. Though a g man, yet so perfect and skillful, that there was ng, however cross and perplexed, brought to him by artists, which he did not play off at sight with ing sweetness and improvements, to the astonish- of our best masters. In sum, he played on the e instrument a full concert, so as the rest flung down instruments, acknowledging the victory. As to wn particular, I stand to this hour amazed that God d give so great perfection to so young a person. e were at that time as excellent in their profession y were thought to be in Europe, Paul Wheeler, Mr. and others, till this prodigy appeared. I can no r question the effects we read of in David's harp to 1 evil spirits, or what is said some particular notes ced in the passions of Alexander, and that King of ark.

h April, 1656. Mr. Berkeley and Mr. Robert Boyle (an excellent person and great virtuoso), Dr. Taylor, Dr. Wilkins, dined with me at Sayes Court, when I nted Dr. Wilkins with my rare burning-glass. In the noon, we all went to Colonel Blount's, to see his r-invented plows.

April, 1656 Came to see Mr. Henshaw and Sir um Paston's son, since Earl of Yarmouth. After- I went to see his Majesty's house at Eltham, both e and chapel in miserable ruins, the noble woods ark destroyed by Rich, the rebel.

May, 1656. I brought Monsieur le Franc, a young h Sorbonnist, a proselyte, to converse with Dr. r; they fell to dispute on original sin, in Latin, a book newly published by the Doctor, who was satisfied with the young man. Thence, to see Mr. alc, our learned antiquary and herald. Returning, shown the three vast volumes of Father Kircher's, *iscus Pamphilus* and *Ægyptiacus*"; in the second ic I found the hieroglyphic I first communicated and to him at Rome by the hands of Mr. Henshaw, he mentions; I designed it from the stone itself ht me to Venice from Cairo by Captain Powell.

7th May, 1656. I visited Dr. Taylor, and prevailed on him to propose Monsieur le Franc to the Bishop that he might have Orders, I having sometime before brought him to a full consent to the Church of England, her doctrine and discipline, in which he had till of late made some difficulty; so he was this day ordained both deacon and priest by the Bishop of Meath. I paid the fees to his lordship, who was very poor and in great want; to that necessity were our clergy reduced! In the afternoon I met Alderman Robinson, to treat with Mr. Papillion about the marriage of my cousin, George Tuke, with Mrs. Fontaine.

8th May, 1656. I went to visit Dr. Wilkins, at Whitehall, when I first met with Sir P. Neal, famous for his optic glasses. Greville, the mathematical instrument maker, showed me his excellent invention to quench fire.

12th May, 1656. Was published my "Essay on Lucretius," with innumerable errata by the negligence of Mr. Triplet, who undertook the correction of the press in my absence. Little of the Epicurean philosophy was then known among us.

28th May, 1656. I dined with Nieuport, the Holland Ambassador, who received me with extraordinary courtesy. I found him a judicious, crafty, and wise man. He gave me excellent cautions as to the danger of the times, and the circumstances our nation was in. I remember the observation he made upon the ill success of our former Parliaments, and their private animosities, and little care of the public.

Came to visit me the old Marquis of Argyle (since executed), Lord Lothian, and some other Scotch noblemen, all strangers to me. Note, the Marquis took the turtle-doves in the aviary for owls.

The Earl of Southampton (since Treasurer) and Mr. Spencer, brother to the Earl of Sunderland, came to see my garden.

7th July, 1656. I began my journey to see some parts of the northeast of England; but the weather was so excessively hot and dusty, I shortened my progress.

8th July, 1656. To Colchester, a fair town, but now wretchedly demolished by the late siege, especially the suburbs, which were all burned, but were then repairing. The town is built on a rising ground, having fair

meadows on one side, and a river with a strong ancient castle, said to have been built by King Coilus, father of Helena, mother of Constantine the Great, of whom I find no memory save at the pinnacle of one of their wool-staple houses, where is a statue of Coilus, in wood, wretchedly carved. The walls are exceedingly strong, deeply trenched, and filled with earth. It has six gates, and some watchtowers, and some handsome churches. But what was shown us as a kind of miracle, at the outside of the Castle, the wall where Sir Charles Lucas and Sir George Lisle, those valiant and noble persons who so bravely behaved themselves in the last siege, were barbarously shot, murdered by Ireton in cold blood, after surrendering on articles; having been disappointed of relief from the Scotch army, which had been defeated with the King at Worcester. The place was bare of grass for a large space, all the rest of it abounding with herbage. For the rest, this is a ragged and factious town, now swarming with sectaries. Their trading is in cloth with the Dutch, and baize and says with Spain; it is the only place in England where these stuffs are made unsophisticated. It is also famous for oysters and eringo root, growing hereabout, and candied for sale.

Went to Dedham, a pretty country town, having a very fair church, finely situated, the valley well watered. Here, I met with Dr. Stokes, a young gentleman, but an excellent mathematician. This is a clothing town, as most are in Essex, but lies in the unwholesome hundreds.

Hence to Ipswich, doubtless one of the sweetest, most pleasant, well-built towns in England. It has twelve fair churches, many noble houses, especially the Lord Devereux's; a brave quay, and commodious harbor, being about seven miles from the main; an ample market place. Here was born the great Cardinal Wolsey, who began a palace here, which was not finished.

I had the curiosity to visit some Quakers here in prison; a new fanatic sect, of dangerous principles, who show no respect to any man, magistrate, or other, and seem a melancholy, proud sort of people, and exceedingly ignorant. One of these was said to have fasted twenty days; but another, endeavoring to do the like, perished on the roth, when he would have eaten, but could not.

10th July, 1656. I returned homeward, passing again through Colchester; and, by the way, near the ancient town of Chelmsford, saw New Hall, built in a park by Henry VII. and VIII., and given by Queen Elizabeth to the Earl of Sussex, who sold it to the late great Duke of Buckingham, and since seized on by Oliver Cromwell (pretended Protector). It is a fair old house, built with brick, low, being only of two stories, as the manner then was; the gate-house better; the court, large and pretty; the staircase, of extraordinary wideness, with a piece representing Sir Francis Drake's action in the year 1580, an excellent sea-piece; the galleries are trifling; the hall is noble; the garden a fair plot, and the whole seat well accommodated with water; but, above all, I admired the fair avenue planted with stately lime trees, in four rows, for near a mile in length. It has three descents, which is the only fault, and may be reformed. There is another fair walk of the same at the mall and wilderness, with a tennis-court, and pleasant terrace toward the park, which was well stored with deer and ponds.

11th July, 1656. Came home by Greenwich ferry, where I saw Sir J. Winter's project of charring sea-coal, to burn out the sulphur, and render it sweet. He did it by burning the coals in such earthen pots as the glass men melt their metal, so firing them without consuming them, using a bar of iron in each crucible, or pot, which bar has a hook at one end, that so the coals being melted in a furnace with other crude sea-coals under them, may be drawn out of the pots sticking to the iron, whence they are beaten off in great half-exhausted cinders, which being rekindled, make a clear, pleasant chamber-fire, deprived of their sulphur and arsenic malignity. What success it may have, time will discover.\*

3d August, 1656. I went to London, to receive the Blessed Sacrament, the first time the Church of England was reduced to a chamber and conventicle; so sharp was the persecution. The parish churches were filled with sectaries of all sorts, blasphemous and ignorant mechanics usurping the pulpits everywhere. Dr. Wild preached in a

\* Many years ago, Lord Dundonald revived the project, with the proposed improvement of extracting and saving the tar. Unfortunately he did not profit by it. The coal thus charred is sold as coke, a very useful fuel for many purposes.

private house in Fleet Street, where we had a great meeting of zealous Christians, who were generally much more devout and religious than in our greatest prosperity. In the afternoon, I went to the French Church in the Savoy, where I heard Monsieur d'Espagne catechize, and so returned to my house.

20th August, 1656. Was a confused election of Parliament called by the Usurper.

7th September, 1656. I went to take leave of my excellent neighbor and friend, Sir. H. Newton and lady, now going to dwell at Warwick; and Mr. Needham, my dear and learned friend, came to visit me.

14th September, 1656. Now was old Sir Henry Vane\* sent to Carisbrook Castle, in Wight, for a foolish book he published; the pretended Protector fortifying himself exceedingly, and sending many to prison.

2d October, 1656. Came to visit me my cousin, Stephens, and Mr. Pierce (since head of Magdalen College, Oxford), a learned minister of Brington, in Northamptonshire, and Captain Cooke, both excellent musicians.

2d November, 1656. There was now nothing practical preached, or that pressed reformation of life, but high and speculative points and strains that few understood, which left people very ignorant, and of no steady principles, the source of all our sects and divisions, for there was much envy and uncharity in the world; God of his mercy amend it! Now, indeed, that I went at all to church, while these usurpers possessed the pulpits, was that I might not be suspected for a Papist, and that, though the minister was Presbyterianly affected, he yet was as I understood duly ordained, and preached sound doctrine after their way, and besides was an humble, harmless, and peaceable man.

25th December, 1656. I went to London, to receive the Blessed Communion, this holy festival at Dr. Wild's lodgings, where I rejoiced to find so full an assembly of devout and sober Christians.

\* Evelyn means the younger Vane. This was "Vane, young in years, but in sage counsel old," the nobleness and independence of whose character, as well as his claims to the affection of posterity, are not ill expressed in the two facts recorded by Evelyn — his imprisonment by Cromwell, and his judicial murder by Charles II. The foolish book to which Evelyn refers was an able and fearless attack on Cromwell's government.

26th December, 1656. I invited some of my neighbors and tenants, according to custom, and to preserve hospitality and charity.

28th December, 1656. A stranger preached on Luke xviii. 7, 8, on which he made a confused discourse, with a great deal of Greek and ostentation of learning, to but little purpose.

30th December, 1656. Dined with me Sir William Paston's son, Mr. Henshaw, and Mr. Clayton.

31st December, 1656. I begged God's blessing and mercies for his goodness to me the past year, and set my domestic affairs in order.

1st January, 1656-57. Having prayed with my family, and celebrated the anniversary, I spent some time in imploring God's blessing the year I was entered into.

7th January, 1657. Came Mr. Matthew Wren (since secretary to the Duke), slain in the Dutch war, eldest son to the Bishop of Ely, now a prisoner in the Tower; a most worthy and honored gentleman.

10th January, 1657. Came Dr. Joyliffe, that famous physician and anatomist, first detector of the lymphatic veins; also the old Marquis of Argyle, and another Scotch Earl.

5th February, 1657. Dined at the Holland Ambassador's; he told me the East India Company of Holland had constantly a stock of £400,000 in India, and forty-eight men-of-war there: he spoke of their exact and just keeping their books and correspondence, so as no adventurer's stock could possibly be lost, or defrauded; that it was a vulgar error that the Hollanders furnished their enemies with powder and ammunition for their money, though engaged in a cruel war, but that they used to merchandise indifferently, and were permitted to sell to the friends of their enemies. He laughed at our Committee of Trade, as composed of men wholly ignorant of it, and how they were the ruin of commerce, by gratifying some for private ends.

10th January, 1657. I went to visit the governor of Havannah, a brave, sober, valiant Spanish gentleman, taken by Captain Young, of Deptford, when, after twenty years being in the Indies, and amassing great wealth, his lady and whole family, except two sons, were burned, destroyed, and taken within sight of Spain, his eldest

son, daughter, and wife, perishing with immense treasure. One son, of about seventeen years old, with his brother of one year old, were the only ones saved. The young gentleman, about seventeen, was a well-complexioned youth, not olive-colored; he spoke Latin handsomely, was extremely well-bred, and born in the Caraccas, 1,000 miles south of the equinoctial, near the mountains of Potosi; he had never been in Europe before. The Governor was an ancient gentleman of great courage, of the order of St. Jago, sorely wounded in his arm, and his ribs broken; he lost for his own share £100,000 sterling, which he seemed to bear with exceeding indifference, and nothing dejected. After some discourse, I went with them to Arundel House, where they dined. They were now going back into Spain, having obtained their liberty from Cromwell. An example of human vicissitude!

14th January, 1657. To London, where I found Mrs. Cary; next day came Mr. Mordaunt (since Viscount Mordaunt), younger son to the Countess of Peterborough, to see his mistress, bringing with him two of my Lord of Dover's daughters: so, after dinner, they all departed.

5th March, 1657. Dr. Rand, a learned physician, dedicated to me his version of Gassendi's "*Vita Peiriskii*."

25th March, 1657. Dr. Taylor showed me his MS. of "Cases of Conscience," or "*Ductor Dubitantium*," now fitted for the press.

The Protector Oliver, now affecting kingship, is petitioned to take the title on him by all his newly-made sycophant lords, etc.; but dares not, for fear of the fanatics, not thoroughly purged out of his rebel army.

21st April, 1657. Came Sir Thomas Hanmer, of Hanmer, in Wales, to see me. I then waited on my Lord Hatton, with whom I dined: at my return, I stepped into Bedlam, where I saw several poor, miserable creatures in chains; one of them was mad with making verses. I also visited the Charter House, formerly belonging to the Carthusians, now an old, neat, fresh, solitary college for decayed gentlemen. It has a grove, bowling green, garden, chapel, and a hall where they eat in common. I likewise saw Christ Church and Hospital, a very good Gothic building; the hall, school, and lodgings in great order for bringing up many hundreds of poor children of both sexes; it is an exemplary charity. There is a

large picture at one end of the hall, representing the governors, founders, and the institution.

25th April, 1657. I had a dangerous fall out of the coach in Covent Garden, going to my brother's, but without harm; the Lord be praised!

1st May, 1657. Divers soldiers were quartered at my house; but I thank God went away the next day toward Flanders.

5th May, 1657. I went with my cousin, George Tuke, to see Baynard, in Surrey, a house of my brother Richard's, which he would have hired. This is a very fair, noble residence, built in a park, and having one of the goodliest avenues of oaks up to it that ever I saw: there is a pond of 60 acres near it; the windows of the chief rooms are of very fine painted glass. The situation is excessively dirty and melancholy.

15th May, 1657. Lawrence, President of Oliver's Council, and some other of his Court-Lords, came in the afternoon to see my garden and plantations.

7th June, 1657. My fourth son was born, christened George (after my grandfather); Dr. Jeremy Taylor officiated in the drawing-room.

18th June, 1657. At Greenwich I saw a sort of cat\* brought from the East Indies, shaped and snouted much like the Egyptian racoon, in the body like a monkey, and so footed; the ears and tail like a cat, only the tail much longer, and the skin variously ringed with black and white; with the tail it wound up its body like a serpent, and so got up into trees, and with it would wrap its whole body round. Its hair was woolly like a lamb; it was exceedingly nimble, gentle, and purred as does the cat.

16th July, 1657. On Dr. Jeremy Taylor's recommendation, I went to Eltham, to help one Moody, a young man, to that living, by my interest with the patron.

6th August, 1657. I went to see Colonel Blount, who showed me the application of the waywiser† to a coach,

\* This was probably the animal called a Moccock (*maucaco*), since well known.

† Beckmann, in his "History of Inventions," has written an account of the different instruments applied to carriages to measure the distance they pass over. He places the first introduction of the *adometer* in England at about the end of the seventeenth century, instead of about the middle, and states it to have been the invention of an ingenious artist named Butterfield.

exactly measuring the miles, and showing them by an index as we went on. It had three circles, one pointing to the number of rods, another to the miles, by 10 to 1,000, with all the subdivisions of quarters; very pretty and useful.

10th August, 1657. Our vicar, from John xviii. 36, declaimed against the folly of a sort of enthusiasts and deperate zealots, called the FIFTH-MONARCHY-MEN, pretending to set up the kingdom of Christ with the sword. To this pass was this age arrived when we had no King in Israel.

21st August, 1657. Fell a most prodigious rain in London, and the year was very sickly in the country.

1st September, 1657. I visited Sir Edmund Bowyer, at his melancholy seat at Camberwell. He has a very pretty grove of oaks, and hedges of yew in his garden, and a handsome row of tall elms before his court.

15th September, 1657. Going to London with some company, we stepped in to see a famous rope-dancer, called THE TURK. I saw even to astonishment the agility with which he performed. He walked barefooted, taking hold by his toes only of a rope almost perpendicular, and without so much as touching it with his hands; he danced blindfold on the high rope, and with a boy of twelve years old tied to one of his feet about twenty feet beneath him, dangling as he danced, yet he moved as nimbly as if it had been but a feather. Lastly, he stood on his head, on the top of a very high mast, danced on a small rope that was very slack, and finally flew down the perpendicular, on his breast, his head foremost, his legs and arms extended, with divers other activities.—I saw the hairy woman, twenty years old, whom I had before seen when a child. She was born at Augsburg, in Germany. Her very eyebrows were combed upward, and all her forehead as thick and even as grows on any woman's head, neatly dressed; a very long lock of hair out of each ear; she had also a most prolix beard, and *moustachios*, with long locks growing on the middle of her nose, like an Iceland dog exactly, the color of a bright brown, fine as well-dressed flax. She was now married, and told me she had one child that was not hairy, nor were any of her parents, or relations. She was very well shaped, and played well on the harpsichord.

17th September, 1657. To see Sir Robert Needham, at Lambeth, a relation of mine; and thence to John Tradescant's museum, in which the chiefest rarities were, in my opinion, the ancient Roman, Indian, and other nations' armor, shields, and weapons; some habits of curiously-colored and wrought feathers, one from the phoenix wing, as tradition goes. Other innumerable things there were printed in his catalogue by Mr. Ashmole, to whom after the death of the widow they are bequeathed, and by him designed as a gift to Oxford.

19th October, 1657. I went to see divers gardens about London: returning, I saw at Dr. Joyliffe's two Virginian rattlesnakes alive, exceeding a yard in length, small heads, slender tails, but in the middle nearly the size of my leg; when vexed, swiftly vibrating and shaking their tails, as loud as a child's rattle; this, by the collision of certain gristly skins curiously jointed, yet loose, and transparent as parchment, by which they give warning; a providential caution for other creatures to avoid them. The Doctor tried their biting on rats and mice, which they immediately killed: but their vigor must needs be much exhausted here, in another climate, and kept only in a barrel of bran.

22d October, 1657. To town, to visit the Holland Ambassador, with whom I had now contracted much friendly correspondence, useful to the intelligence I constantly gave his Majesty abroad.

26th November, 1657. I went to London, to a court of the East India Company on its new union, in Merchant-Taylors' Hall, where was much disorder by reason of the Anabaptists, who would have the adventurers obliged only by an engagement, without swearing, that they still might pursue their private trade; but it was carried against them. Wednesday was fixed on for a general court for election of officers, after a sermon and prayers for good success. The Stock resolved on was £800,000.

27th November, 1657. I took the oath at the East India House, subscribing £500.

2d December, 1657. Dr. Raynolds (since Bishop of Norwich) preached before the company at St. Andrew Under-shaft, on Nehemiah xiii. 31, showing, by the example of Nehemiah, all the perfections of a trusty per-

son in public affairs, with many good precepts apposite to the occasion, ending with a prayer for God's blessing on the company and the undertaking.

3d December, 1657. Mr. Gunning preached on John iii. 3, against the Anabaptists, showing the effect and necessity of the sacrament of baptism. This sect was now wonderfully spread.

25th December, 1657. I went to London with my wife, to celebrate Christmas-day, Mr. Gunning preaching in Exeter chapel, on Micah vii. 2. Sermon ended, as he was giving us the Holy Sacrament, the chapel was surrounded with soldiers, and all the communicants and assembly surprised and kept prisoners by them, some in the house, others carried away. It fell to my share to be confined to a room in the house, where yet I was permitted to dine with the master of it, the Countess of Dorset, Lady Hatton, and some others of quality who invited me. In the afternoon, came Colonel Whalley, Goffe, and others, from Whitehall, to examine us one by one; some they committed to the marshal, some to prison. When I came before them, they took my name and abode, examined me why, contrary to the ordinance made, that none should any longer observe the superstitious time of the nativity (so esteemed by them), I durst offend, and particularly be at common prayers, which they told me was but the mass in English, and particularly pray for Charles Stuart; for which we had no Scripture. I told them we did not pray for Charles Stuart, but for all Christian kings, princes, and governors. They replied, in so doing we prayed for the king of Spain, too, who was their enemy and a Papist, with other frivolous and ensnaring questions, and much threatening; and, finding no color to detain me, they dismissed me with much pity of my ignorance. These were men of high flight and above ordinances, and spoke spiteful things of our Lord's nativity. As we went up to receive the Sacrament, the miscreants held their muskets against us, as if they would have shot us at the altar; but yet suffering us to finish the office of Communion, as perhaps not having instructions what to do, in case they found us in that action. So I got home late the next day; blessed be God!

27th January, 1657-58. After six fits of a quartan ague, with which it pleased God to visit him, died my dear son,

Richard, to our inexpressible grief and affliction, five years and three days old only, but at that tender age a prodigy for wit and understanding; for beauty of body, a very angel; for endowment of mind, of incredible and rare hopes. To give only a little taste of them, and thereby glory to God, who "out of the mouths of babes and infants does sometimes perfect his praises," he had learned all his catechism; at two years and a half old, he could perfectly read any of the English, Latin, French, or Gothic letters, pronouncing the first three languages exactly. He had, before the fifth year, or in that year, not only skill to read most written hands, but to decline all the nouns, conjugate the verbs regular, and most of the irregular; learned out "Puerilis," got by heart almost the entire vocabulary of Latin and French primitives and words, could make congruous syntax, turn English into Latin, and *vice versâ*, construe and prove what he read, and did the government and use of relatives, verbs, substantives, ellipses, and many figures and tropes, and made a considerable progress in Comenius's "*Janua*"; began himself to write legibly, and had a strong passion for Greek. The number of verses he could recite was prodigious, and what he remembered of the parts of plays, which he would also act; and, when seeing a Plautus in one's hand, he asked what book it was, and, being told it was comedy, and too difficult for him, he wept for sorrow. Strange was his apt and ingenious application of fables and morals; for he had read Æsop; he had a wonderful disposition to mathematics, having by heart divers propositions of Euclid that were read to him in play, and he would make lines and demonstrate them. As to his piety, astonishing were his applications of Scripture upon occasion, and his sense of God; he had learned all his catechism early, and understood the historical part of the Bible and New Testament to a wonder, how Christ came to redeem mankind, and how, comprehending these necessities himself, his godfathers were discharged of their promise.

These and the like illuminations, far exceeding his age and experience, considering the prettiness of his address and behavior, cannot but leave impressions in me at the memory of him. When one told him how many days a Quaker had fasted, he replied that was no wonder; for

Christ had said that man should not live by bread alone, but by the Word of God. He would of himself select the most pathetic psalms, and chapters out of Job, to read to his maid during his sickness, telling her, when she pitied him, that all God's children must suffer affliction. He declaimed against the vanities of the world, before he had seen any. Often he would desire those who came to see him to pray by him, and a year before he fell sick, to kneel and pray with him alone in some corner. How thankfully would he receive admonition! how soon be reconciled! how indifferent, yet continually cheerful! He would give grave advice to his brother, John, bear with his impertinences, and say he was but a child. If he heard of or saw any new thing, he was unquiet till he was told how it was made; he brought to us all such difficulties as he found in books, to be expounded. He had learned by heart divers sentences in Latin and Greek, which, on occasion, he would produce even to wonder. He was all life, all prettiness, far from morose, sullen, or childish in anything he said or did. The last time he had been at church (which was at Greenwich), I asked him, according to custom, what he remembered of the sermon; two good things, Father, said he, *bonum gratiæ* and *bonum gloriæ*, with a just account of what the preacher said.

The day before he died, he called to me: and in a more serious manner than usual, told me that for all I loved him so dearly I should give my house, land, and all my fine things to his brother Jack, he should have none of them; and, the next morning, when he found himself ill, and that I persuaded him to keep his hands in bed, he demanded whether he might pray to God with his hands unjoined; and a little after, while in great agony, whether he should not offend God by using his holy name so often calling for ease. What shall I say of his frequent pathetic ejaculations uttered of himself: "Sweet Jesus, save me, deliver me, pardon my sins, let thine angels receive me!" So early knowledge, so much piety and perfection! But thus God, having dressed up a saint fit for himself, would not longer permit him with us, unworthy of the future fruits of this incomparable hopeful blossom. Such a Child I never saw: for such a child I bless God, in whose bosom he is! May I and mine

become as this little child, who now follows the child Jesus that Lamb of God in a white robe, whithersoever he goes; even so, Lord Jesus, *fiat voluntas tua!* Thou gavest him to us, thou hast taken him from us, blessed be the name of the Lord! That I had anything acceptable to thee was from thy grace alone, seeing from me he had nothing but sin, but that thou hast pardoned! blessed be my God for ever, Amen.

In my opinion, he was suffocated by the women and maids that attended him, and covered him too hot with blankets as he lay in a cradle, near an excessive hot fire in a close room. I suffered him to be opened, when they found that he was what is vulgarly called liver-grown. I caused his body to be coffined in lead, and deposited on the 30th at eight o'clock that night in the church at Deptford, accompanied with divers of my relations and neighbors, among whom I distributed rings with this motto: "*Dominus abstulit;*" intending, God willing, to have him transported with my own body to be interred in our dormitory in Wotton Church, in my dear native county of Surrey, and to lay my bones and mingle my dust with my fathers, if God be gracious to me, and make me as fit for him as this blessed child was. The Lord Jesus sanctify this and all other my afflictions, Amen.

Here ends the joy of my life, and for which I go even mourning to the grave.

15th February, 1658. The afflicting hand of God being still upon us, it pleased him also to take away from us this morning my youngest son, George, now seven weeks languishing at nurse, breeding teeth, and ending in a drowsy. God's holy will be done! He was buried in Deptford Church, the 17th following.

25th February, 1658. Came Dr. Jeremy Taylor, and my brothers, with other friends, to visit and condole with us.

7th March, 1658. To London, to hear Dr. Taylor in a private house on Luke xiii. 23, 24. After the sermon, followed the blessed Communion, of which I participated. In the afternoon, Dr. Gunning, at Exeter House, expounding part of the Creed.

This had been the severest winter that any man alive had known in England. The crows' feet were frozen to their prey. Islands of ice inclosed both fish and fowl frozen, and some persons in their boats.

15th May, 1658, was a public fast, to avert an epidemical sickness, very mortal this spring.

20th May, 1658. I went to see a coach race in Hyde Park, and collationed in Spring Garden.

23d May, 1658. Dr. Manton, the famous Presbyterian, preached at Covent Garden, on Matthew vi. 10, showing what the kingdom of God was, how pray for it, etc.

There was now a collection for persecuted and sequestered Ministers of the Church of England, whereof divers are in prison. A sad day! The Church now in dens and caves of the earth.

31st May, 1658. I went to visit my Lady Peterborough, whose son, Mr. Mordaunt, prisoner in the Tower, was now on his trial, and acquitted but by one voice; but that holy martyr, Dr. Hewer, was condemned to die without law, jury, or justice, but by a mock Council of State, as they called it. A dangerous, treacherous time!

2d June, 1658. An extraordinary storm of hail and rain, the season as cold as winter, the wind northerly near six months.

3d June, 1658. A large whale was taken between my land abutting on the Thames and Greenwich, which drew an infinite concourse to see it, by water, horse, coach, and on foot, from London, and all parts. It appeared first below Greenwich at low water, for at high water it would have destroyed all the boats, but lying now in shallow water encompassed with boats, after a long conflict, it was killed with a harping iron, struck in the head, out of which spouted blood and water by two tunnels; and after a horrid groan, it ran quite on shore, and died. Its length was fifty-eight feet, height sixteen; black skinned, like coach leather; very small eyes, great tail, only two small fins, a peaked snout and a mouth so wide, that divers men might have stood upright in it; no teeth, but sucked the slime only as through a grate of that bone which we call whale-bone; the throat yet so narrow, as would not have admitted the least of fishes. The extremes of the cetaceous bones hang downward from the upper jaw, and are hairy toward the ends and bottom within side: all of it prodigious; but in nothing more wonderful than that an animal of so great a bulk should be nourished only by slime through those grates.

8th June, 1658. That excellent preacher and holy man, Dr. Hewer, was martyred for having intelligence with his Majesty, through the Lord Marquis of Ormond.

9th June, 1658. I went to see the Earl of Northumberland's pictures, whereof that of the Venetian Senators was one of the best of Titian's and another of Andrea del Sarto, viz, a Madonna, Christ, St. John, and an Old Woman; a St. Catharine of Da Vinci, with divers portraits of Vandyck; a Nativity of Georgioni; the last of our blessed Kings (Charles I.), and the Duke of York, by Lely, a Rosary by the famous Jesuits of Brussels, and several more. This was in Suffolk House: the new front toward the gardens is tolerable, were it not drowned by a too massy and clumsy pair of stairs of stone, without any neat invention.

10th June, 1658. I went to see the Medical Garden at Westminster, well stored with plants, under Morgan, a very skillful botanist.

26th June, 1658. To Eltham, to visit honest Mr. Owen.

3d July, 1658. To London, and dined with Mr. Henshaw, Mr. Dorell, and Mr. Ashmole, founder of the Oxford repository of rarities, with divers doctors of physic and virtuosos.

15th July, 1658. Came to see my Lord Kilmarry and Lady, Sir Robert Needham, Mr. Offley, and two daughters of my Lord Willoughby, of Parham.

3d August, 1658. Went to Sir John Evelyn at Godstone. The place is excellent, but might be improved by turning some offices of the house, and removing the garden. The house being a noble fabric, though not comparable to what was first built by my uncle, who was master of all the powder mills.

5th August, 1658. We went to Squirries to visit my Cousin Leech, daughter to Sir John; a pretty, finely wooded, well watered seat, the stables good, the house old, but convenient. 6th. Returned to Wotton.

10th August, 1658. I dined at Mr. Carew Raleigh's, at Horsley, son to the famous Sir Walter.

14th August, 1658. We went to Durdans [at Epsom] to a challenged match at bowls for £10, which we won.

18th August, 1658. To Sir Ambrose Browne, at Betchworth Castle, in that tempestuous wind which threw down my greatest trees at Sayes Court, and did so much mis-

chief all over England. It continued the whole night; and, till three in the afternoon of the next day, in the southwest, and destroyed all our winter fruit.

3d September, 1658. Died that arch-rebel, Oliver Cromwell, called Protector.

16th September, 1658. Was published my translation of St. Chrysostom on "Education of Children," which I dedicated to both my brothers to comfort them on the loss of their children.

21st September, 1658. My Lord Berkeley, of Berkeley Castle, invited me to dinner.

26th September, 1658. Mr. King preached at Ashted, on Proverbs xv. 24; a Quaker would have disputed with him. In the afternoon, we heard Dr. Hacket (since Bishop of Litchfield) at Cheam, where the family of the Lumleys lie buried.

27th September, 1658. To Beddington, that ancient seat of the Carews, a fine old hall, but a scrambling house, famous for the first orange garden in England, being now overgrown trees, planted in the ground, and secured in winter with a wooden tabernacle and stoves. This seat is rarely watered, lying low, and environed with good pastures. The pomegranates bear here. To the house is also added a fine park. Thence, to Carshalton, excellently watered, and capable of being made a most delicious seat, being on the sweet downs, and a champaign about it full planted with walnut and cherry trees, which afford a considerable rent.

Riding over these downs, and discoursing with the shepherds, I found that digging about the bottom near Sir Christopher Buckle's,\* near Banstead, divers medals have been found, both copper and silver, with foundations of houses, urns, etc. Here, indeed, anciently stood a city of the Romans. See Antonine's "Itineraries."

29th September, 1658. I returned home, after a ten weeks' absence.

2d October, 1658. I went to London, to receive the Holy Sacrament.

On the 3d, Dr. Wild preached in a private place on

\* Not far from the course of the Roman Road from Chichester, through Sussex, passing through Ockley, and Dorking churchyard. Considerable remains of a Roman building have since been found on Waltonbenth, south of this house.

Isaiah i. 4, showing the parallel between the sins of Israel and those of England. In the afternoon, Mr. Hall (son to Joseph, Bishop of Norwich) on 1 Cor. vi. 2, of the dignity of the Saints; a most excellent discourse.

4th October, 1658. I dined with the Holland ambassador, at Derby House: returning, I diverted to see a very WHITE RAVEN, bred in Cumberland; also a porcupine, of that kind that shoots its quills, of which see Claudian; it was headed like a rat, the fore feet like a badger, the hind feet like a bear.

19th October, 1658. I was summoned to London, by the commissioners for new buildings; afterward, to the commission of sewers; but because there was an oath to be taken of fidelity to the Government as now constituted without a king, I got to be excused, and returned home.

22d October, 1658. Saw the superb funeral of the protector. He was carried from Somerset House in a velvet bed of state, drawn by six horses, housed with the same; the pall held by his new lords; Oliver lying in effigy, in royal robes, and crowned with a crown, sceptre, and globe, like a king. The pendants and guidons were carried by the officers of the army; the imperial banners, achievements, etc., by the heralds in their coats; a rich caparisoned horse, embroidered all over with gold; a knight of honor, armed *cap-a-pie*, and, after all, his guards, soldiers, and innumerable mourners. In this equipage, they proceeded to Westminster: but it was the most joyful funeral I ever saw; for there were none that cried but dogs, which the soldiers hooted away with a barbarous noise, drinking and taking tobacco in the streets as they went.

I returned not home till the 17th of November.

I was summoned again to London by the commissioners for new foundations to be erected within such a distance of London.

6th December, 1658. Now was published my "French Gardener," the first and best of the kind that introduced the use of the olitory garden to any purpose.

23d December, 1658. I went with my wife to keep Christmas at my cousin, George Tuke's, at Crossing Temple, in Essex. Lay that night at Brentwood.

25th December, 1658. Here was no public service, but what we privately used. I blessed God for his mercies

the year past; and 1st of January, begged a continuance of them. Thus, for three Sundays, by reason of the incumbent's death, here was neither praying nor preaching, though there was a chapel in the house.

17th January, 1659. Our old vicar preached, taking leave of the parish in a pathological speech, to go to a living in the city.

24th March, 1659. I went to London, to speak to the patron, Alderman Cuttler, about presenting a fit pastor for our destitute parish church.

5th April, 1659. Came the Earl of Northampton and the famous painter, Mr. Wright, to visit me.

10th April, 1659. One Mr. Littler, being now presented to the living of our parish, preached on John vi. 55, a sermon preparatory to the Holy Sacrament.

25th April, 1659. A wonderful and sudden change in the face of the public; the new protector, Richard, slighted; several pretenders and parties strive for the government: all anarchy and confusion; Lord have mercy on us!

5th May, 1659. I went to visit my brother in London; and next day, to see a new opera, after the Italian way, in recitative music and scenes, much inferior to the Italian composure and magnificence; but it was prodigious that in a time of such public consternation such a vanity should be kept up, or permitted. I, being engaged with company, could not decently resist the going to see it, though my heart smote me for it.

7th May, 1659. Came the Ambassador of Holland and his lady to visit me, and stayed the whole afternoon.

12th May, 1659. I returned the visit, discoursing much of the revolutions, etc.

19th May, 1659. Came to dine with me my Lord Gallogway and his son, a Scotch Lord and learned: also my brother and his lady, Lord Berkeley and his lady, Mrs. Shirley, and the famous singer, Mrs. Knight,\* and other friends.

23d May, 1659. I went to Rookwood, and dined with Sir William Hicks, where was a great feast and much company. It is a melancholy old house, environed with trees and rooks.

26th May, 1659. Came to see me my Lord George

\*Afterward one of Charles II.'s mistresses.

Berkeley, Sir William Ducie, and Sir George Pott's son of Norfolk.

29th May, 1659. The nation was now in extreme confusion and unsettled, between the Armies and the Sectaries, the poor Church of England breathing as it were her last; so sad a face of things had overspread us.

7th June, 1659. To London, to take leave of my brother, and see the foundations now laying for a long street and buildings in Hatton Garden, designed for a little town, lately an ample garden.

1st September, 1659. I communicated to Mr. Robert Boyle, son to the Earl of Cork, my proposal for erecting a philosophic and mathematic college.

15th September, 1659. Came to see me Mr. Brereton,\* a very learned gentleman, son to my Lord Brereton, with his and divers other ladies. Also, Henry Howard of Norfolk, since Duke of Norfolk.

30th September, 1659. I went to visit Sir William Ducie and Colonel Blount, where I met Sir Henry Blount, the famous traveler and water drinker.

10th October, 1659. I came with my wife and family to London: took lodgings at the Three Feathers, in Russell Street, Covent Garden, for the winter, my son being very unwell.

11th October, 1659. Came to visit me Mr. William Coventry (since secretary to the Duke), son to the Lord Keeper, a wise and witty gentleman.

The Army now turned out the Parliament. We had now no government in the nation: all in confusion; no magistrate either owned or pretended; but the soldiers, and they not agreed. God Almighty have mercy on us, and settle us!

17th October, 1659. I visited Mr. Howard, at Arundel House, who gave me a fair onyx set in gold, and showed me his design of a palace there.

21st October, 1659. A private fast was kept by the Church of England Protestants in town, to beg of God the removal of his judgments, with devout prayers for his mercy to our calamitous Church.

7th November 1659. Was published my bold "Apology

\*William, afterward third Lord Brereton; an accomplished and able man, who assisted Evelyn in establishing the Royal Society. He died in 1679.

for the King" in this time of danger, when it was capital to speak or write in favor of him. It was twice printed; so universally it took.

9th November, 1659. We observed our solemn Fast for the calamity of our Church.

12th November, 1659. I went to see the several drugs for the confection of treacle, dioscoridium, and other electuaries, which an ingenious apothecary had not only prepared and ranged on a large and very long table, but covered every ingredient with a sheet of paper, on which was very lively painted the thing in miniature, well to the life, were it plant, flower, animal, or other exotic drug.

15th November, 1659. Dined with the Dutch Ambassador. He did in a manner acknowledge that his nation mind only their own profit, do nothing out of gratitude, but collaterally as it relates to their gain, or security; and therefore the English were to look for nothing of assistance to the banished King. This was to me no very grateful discourse, though an ingenuous confession.

18th November, 1659. Mr. Gunning celebrated the wonted Fast, and preached on Phil. ii. 12, 13.

24th November, 1659. Sir John Evelyn [of Godstone] invited us to the forty-first wedding-day feast, where was much company of friends.

26th November, 1659. I was introduced into the acquaintance of divers learned and worthy persons, Sir John Marsham, Mr. Dugdale, Mr. Stanley, and others.

9th December, 1659. I supped with Mr. Gunning, it being our fast day, Dr. Fearne, Mr. Thrisco, Mr. Chamberlain, Dr. Henchman, Dr. Wild, and other devout and learned divines, firm confessors, and excellent persons. Note: Most of them since made bishops.

10th December, 1659. I treated privately with Colonel Morley, then Lieutenant of the Tower, and in great trust and power, concerning delivering it to the King, and the bringing of him in, to the great hazard of my life, but the Colonel had been my schoolfellow, and I knew would not betray me.

12th December, 1659. I spent in public concerns for his Majesty, pursuing the point to bring over Colonel Morley, and his brother-in-law, Fay, Governor of Portsmouth.

18th December, 1659. Preached that famous divine, Dr. Sanderson (since Bishop of Lincoln), now eighty years old, on Jer. xxx. 13, concerning the evil of forsaking God.

29th December, 1659. Came my Lord Count Arundel, of Wardour, to visit me. I went also to see my Lord Viscount Montague.

31st December, 1659. Settling my domestic affairs in order, blessed God for his infinite mercies and preservations the past year.

ANNUS MIRABILIS, January 1st, 1659-60. Begging God's blessings for the following year, I went to Exeter Chapel, when Mr. Gunning began the year on Galatians iv. 3-7, showing the love of Christ in shedding his blood so early for us.

12th January, 1660. Wrote to Colonel Morley again to declare for his Majesty.

22d January, 1660. I went this afternoon to visit Colonel Morley. After dinner I discoursed with him; but he was very jealous, and would not believe that Monk came in to do the King any service; I told him that he might do it without him, and have all the honor. He was still doubtful, and would resolve on nothing yet, so I took leave.

3d February, 1660. Kept the Fast. General Monk came now to London out of Scotland; but no man knew what he would do or declare; yet he was met on his way by the gentlemen of all the counties which he passed with petitions that he would recall the old long-interrupted Parliament, and settle the nation in some order, being at this time in most prodigious confusion, and under no government, everybody expecting what would be next and what he would do.

10th February, 1660. Now were the gates of the city broken down by General Monk; which exceedingly exasperated the city, the soldiers marching up and down as triumphing over it, and all the old army of the fanatics put out of their posts and sent out of town.

11th February, 1660. A signal day. Monk, perceiving how infamous and wretched a pack of knaves would have still usurped the supreme power, and having intelligence that they intended to take away his commission, repenting of what he had done to the city, and where he and

his forces were quartered, marches to Whitehall, dissipates that nest of robbers, and convenes the old Parliament, the Rump Parliament (so called as retaining some few rotten members of the other) being dissolved; and for joy whereof were many thousands of rumps roasted publicly in the streets at the bonfires this night, with ringing of bells, and universal jubilee. This was the first good omen.

From 17th February to 5th April, I was detained in bed with a kind of double tertian, the cruel effects of the spleen and other distempers, in that extremity that my physicians, Drs. Wetherborn, Needham, and Claude, were in great doubt of my recovery; but it pleased God to deliver me out of this affliction, for which I render him hearty thanks: going to church the 8th, and receiving the blessed eucharist.

During this sickness came divers of my relations and friends to visit me, and it retarded my going into the country longer than I intended; however, I wrote and printed a letter in defense of his Majesty,\* against a wicked forged paper, pretended to be sent from Brussels to defame his Majesty's person and virtues and render him odious, now when everybody was in hope and expectation of the General and Parliament recalling him, and establishing the Government on its ancient and right basis. The doing this toward the decline of my sickness, and sitting up long in my bed, had caused a small relapse, out of which it yet pleased God also to free me, so as by the 14th I was able to go into the country, which I did to my sweet and native air at Wotton.

3d May, 1660. Came the most happy tidings of his Majesty's gracious declaration and applications to the Parliament, General, and people, and their dutiful acceptance and acknowledgment, after a most bloody and unreasonable rebellion of near twenty years. Praised be forever the Lord of Heaven, who only doeth wondrous things, because his mercy endureth forever.

8th May, 1660. This day was his Majesty proclaimed in London, etc.

\*With the title of "The Late News, or Message from Brussels Unmasked." This, and the pamphlet which gave rise to it, are reprinted in "Evelyn's Miscellaneous Writings."

9th May, 1660. I was desired and designed to accompany my Lord Berkeley with the public address of the Parliament, General, etc., to the King, and invite him to come over and assume his Kingly Government, he being now at Breda; but I was yet so weak, I could not make that journey by sea, which was not a little to my detriment, so I went to London to excuse myself, returning the 10th, having yet received a gracious message from his Majesty by Major Scot and Colonel Tuke.

24th May, 1660. Came to me Colonel Morley, about procuring his pardon, now too late, seeing his error and neglect of the counsel I gave him, by which, if he had taken it he had certainly done the great work with the same ease that Monk did it, who was then in Scotland, and Morley in a post to have done what he pleased, but his jealousy and fear kept him from that blessing and honor. I addressed him to Lord Mordaunt, then in great favor, for his pardon, which he obtained at the cost of £1,000, as I heard. Oh, the sottish omission of this gentleman! what did I not undergo of danger in this negotiation, to have brought him over to his Majesty's interest, when it was entirely in his hands!

29th May, 1660. This day, his Majesty, Charles II. came to London, after a sad and long exile and calamitous suffering both of the King and Church, being seventeen years. This was also his birthday, and with a triumph of above 20,000 horse and foot, brandishing their swords, and shouting with inexpressible joy; the ways strewn with flowers, the bells ringing, the streets hung with tapestry, fountains running with wine; the Mayor, Aldermen, and all the companies, in their liveries, chains of gold, and banners; Lords and Nobles, clad in cloth of silver, gold, and velvet; the windows and balconies, all set with ladies; trumpets, music, and myriads of people flocking, even so far as from Rochester, so as they were seven hours in passing the city, even from two in the afternoon till nine at night.

I stood in the Strand and beheld it, and blessed God. And all this was done without one drop of blood shed, and by that very army which rebelled against him; but it was the Lord's doing, for such a restoration was never mentioned in any history, ancient or modern, since the return of the Jews from their Babylonish captivity; nor

so joyful a day and so bright ever seen in this nation, this happening when to expect or effect it was past all human policy.

4th June, 1660. I received letters of Sir Richard Browne's landing at Dover, and also letters from the Queen, which I was to deliver at Whitehall, not as yet presenting myself to his Majesty, by reason of the infinite concourse of people. The eagerness of men, women, and children, to see his Majesty, and kiss his hands, was so great, that he had scarce leisure to eat for some days, coming as they did from all parts of the nation; and the King being as willing to give them that satisfaction, would have none kept out, but gave free access to all sorts of people.

Addressing myself to the Duke, I was carried to his Majesty, when very few noblemen were with him, and kissed his hands, being very graciously received. I then returned home, to meet Sir Richard Browne, who came not till the 8th, after nineteen years exile, during all which time he kept up in his chapel the Liturgy and Offices of the Church of England, to his no small honor, and in a time when it was so low, and as many thought utterly lost, that in various controversies both with Papists and Sectaries, our divines used to argue for the visibility of the Church, from his chapel and congregation.

I was all this week to and fro at court about business.

16th June, 1660. The French, Italian, and Dutch Ministers came to make their address to his Majesty, one Monsieur Stoepe pronouncing the harangue with great eloquence.

18th June, 1660. I proposed the embassy to Constantinople for Mr. Henshaw; but my Lord Winchelsea struck in.

Goods that had been pillaged from Whitehall during the Rebellion were now daily brought in, and restored upon proclamation; as plate, hangings, pictures, etc.

22d June, 1660. The Warwickshire gentlemen (as did all the shires and chief towns in all the three nations) presented their congratulatory address. It was carried by my Lord Northampton.

30th June, 1660. The Sussex gentlemen presented their address, to which was my hand. I went with it, and kissed his Majesty's hand, who was pleased to own me

more particularly by calling me his old acquaintance, and speaking very graciously to me.

3d July, 1660. I went to Hyde Park, where was his Majesty, and abundance of gallantry.

4th July, 1660. I heard Sir Samuel Tuke harangue to the House of Lords, in behalf of the Roman Catholics, and his account of the transaction at Colchester in murdering Lord Capel, and the rest of those brave men, that suffered in cold blood, after articles of rendition.

5th July, 1660. I saw his Majesty go with as much pomp and splendor as any earthly prince could do to the great city feast, the first they had invited him to since his return; but the exceeding rain which fell all that day much eclipsed its lustres. This was at Guildhall, and there was also all the Parliament men, both Lords and Commons. The streets were adorned with pageants, at immense cost.

6th July, 1660. His Majesty began first to TOUCH FOR THE EVIL! according to custom, thus: his Majesty sitting under his state in the banqueting house, the chirurgeons cause the sick to be brought, or led, up to the throne, where they kneeling, the King strokes their faces, or cheeks with both his hands at once, at which instant a chaplain in his formalities says, "He put his hands upon them, and he healed them." This is said to every one in particular. When they have all been touched, they come up again in the same order, and the other chaplain kneeling, and having angel gold\* strung on white ribbon on his arm, delivers them one by one to his Majesty, who puts them about the necks of the touched as they pass, while the first chaplain repeats, "That is the true light who came into the world." Then follows, an Epistle (as at first a Gospel) with the Liturgy, prayers for the sick, with some alteration; lastly the blessing; and then the Lord Chamberlain and the Comptroller of the Household bring a basin, ewer, and towel, for his Majesty to wash.

The King received a congratulatory address from the city of Cologne, in Germany, where he had been some time in his exile; his Majesty saying they were the best people in the world, the most kind and worthy to him that he ever met with.

\*Pieces of money, so called from the figure of an angel on them.

I recommended Monsieur Messary to be Judge Advocate in Jersey, by the Vice-Chamberlain's mediation with the Earl of St. Albans; and saluted my excellent and worthy noble friend, my Lord Ossory, son to the Marquis of Ormond, after many years' absence returned home.

8th July, 1660. Mr. Henchman preached on Ephes. v. 5, concerning Christian circumspection. From henceforth, was the Liturgy publicly used in our churches, whence it had been for so many years banished.

15th July, 1660. Came Sir George Carteret and lady to visit us: he was now Treasurer of the Navy.

28th July, 1660. I heard his Majesty's speech in the Lords' House, on passing the Bills of Tonnage and Poundage; restoration of my Lord Ormond to his estate in Ireland; concerning the commission of sewers, and continuance of the excise. In the afternoon I saluted my old friend, the Archbishop of Armagh, formerly of Londonderry (Dr. Bramhall). He presented several Irish divines to be promoted as Bishops in that kingdom, most of the Bishops in the three kingdoms being now almost worn out, and the Sees vacant.

31st July, 1660. I went to visit Sir Philip Warwick, now secretary to the Lord Treasurer, at his house in North Cray.

19th August, 1660. Our vicar read the Thirty-nine Articles to the congregation, the national assemblies beginning now to settle, and wanting instruction.

23d August, 1660. Came Duke Hamilton, Lord Lothian, and several Scottish Lords, to see my garden.

25th August, 1660. Colonel Spencer, colonel of a regiment of horse in our county of Kent, sent to me, and intreated that I would take a commission for a troop of horse, and that I would nominate my lieutenant and ensigns; I thanked him for the honor intended me; but would by no means undertake the trouble.

4th September, 1660. I was invited to an ordination by the Bishop of Bangor, in Henry VII.'s chapel, Westminster, and afterward saw the audience of an Envoyée from the Duke of Anjou, sent to compliment his Majesty's return.

5th September, 1660. Came to visit and dine with me the Envoyée of the King of Poland, and Resident of the King of Denmark, etc.

7th September, 1660. I went to Chelsea to visit Mr. Boyle, and see his pneumatic engine perform divers experiments. Thence, to Kensington, to visit Mr. Henshaw, returning home that evening.

13th September, 1660. I saw in Southwark, at St. Margaret's fair, monkeys and apes dance, and do other feats of activity on the high rope; they were gallantly clad *d la monde*, went upright, saluted the company, bowing and pulling off their hats; they saluted one another with as good a grace as if instructed by a dancing master; they turned heels over head with a basket having eggs in it, without breaking any; also, with lighted candles in their hands, and on their heads, without extinguishing them, and with vessels of water without spilling a drop. I also saw an Italian wench dance, and perform all the tricks on the high rope to admiration; all the Court went to see her. Likewise, here was a man who took up a piece of iron cannon of about 400lb. weight with the hair of his head only.

17th September, 1660. Went to London, to see the splendid entry of the Prince de Ligne, Ambassador extraordinary from Spain; he was general of the Spanish King's horse in Flanders, and was accompanied with divers great persons from thence, and an innumerable retinue. His train consisted of seventeen coaches, with six horses of his own, besides a great number of English, etc. Greater bravery had I never seen. He was received in the Banqueting House, in exceeding state, all the great officers of Court attending.

23d September, 1650. In the midst of all this joy and jubilee, the Duke of Gloucester died of the small-pox, in the prime of youth, and a prince of extraordinary hopes.

27th September, 1660. The King received the merchant's addresses in his closet, giving them assurances of his persisting to keep Jamaica, choosing Sir Edward Massey Governor. In the afternoon, the Danish Ambassador's condolences were presented, on the death of the Duke of Gloucester. This evening, I saw the Princess Royal, mother to the Prince of Orange, now come out of Holland in a fatal period.

6th October, 1660. I paid the great tax of poll money, levied for disbanding the army, till now kept up. I

paid as an Esquire £10, and one shilling for every servant in my house.

7th October, 1660. There dined with me a French count, with Sir George Tuke, who came to take leave of me, being sent over to the Queen-Mother, to break the marriage of the Duke with the daughter of Chancellor Hyde. The Queen would fain have undone it; but it seems matters were reconciled, on great offers of the Chancellor's to befriend the Queen, who was much in debt, and was now to have the settlement of her affairs go through his hands.

11th October, 1660. The regicides who sat on the life of our late King, were brought to trial in the Old Bailey, before a commission of oyer and terminer.

14th October, 1660. Axtall, Carew, Clement, Hacker, Hewson, and Peters, were executed.

17th October, 1660. Scot, Seroop, Cook, and Jones, suffered for reward of their iniquities at Charing Cross, in sight of the place where they put to death their natural prince, and in the presence of the King his son, whom they also sought to kill. I saw not their execution, but met their quarters, mangled, and cut, and recking, as they were brought from the gallows in baskets on the hurdle. Oh, the miraculous providence of God!

28th October, 1660. His Majesty went to meet the Queen-Mother.

29th October, 1660. Going to London, my Lord Mayor's show stopped me in Cheapside; one of the pageants represented a great wood, with the royal oak, and history of his Majesty's miraculous escape at Boscobel.

31st October, 1660. Arrived now to my fortieth year, I rendered to Almighty God my due and hearty thanks.

1st November, 1660. I went with some of my relations to Court, to show them his Majesty's cabinet and closet of rarities; the rare miniatures of Peter Oliver, after Raphael, Titian, and other masters, which I infinitely esteem; also, that large piece of the Duchess of Lennox, done in enamel, by Petitot, and a vast number of agates, onyxes, and intaglios, especially a medallion of Cæsar, as broad as my hand; likewise, rare cabinets of pietra-com-messa, a landscape of needlework, formerly presented by the Dutch to King Charles I. Here I saw a vast book of maps, in a volume near four yards large; a curious ship

model; and, among the clocks, one that showed the rising and setting of the sun in the zodiac; the sun represented by a face and rays of gold, upon an azure sky, observing the diurnal and annual motion, rising and setting behind a landscape of hills,—the work of our famous Fromantil,—and several other rarities.

3d October, 1660. Arrived the Queen-Mother in England, whence she had been banished for almost twenty years; together with her illustrious daughter, the Princess Henrietta, divers princes and noblemen, accompanying them.

15th October, 1660. I kissed the Queen-Mother's hand.

20th October, 1660. I dined at the Clerk Comptroller's of the Green Cloth, being the first day of the re-establishment of the Court diet, and settling of his Majesty's household.

23d October, 1660. Being this day in the bedchamber of the Princess Henrietta, where were many great beauties and noblemen, I saluted divers of my old friends and acquaintances abroad; his Majesty carrying my wife to salute the Queen and Princess, and then led her into his closet, and with his own hands showed her divers curiosities.

25th October, 1660. Dr. Rainbow preached before the King, on Luke ii. 14, of the glory to be given God for all his mercies, especially for restoring the Church and government; now the service was performed with music, voices, etc., as formerly.

27th November, 1660. Came down the Clerk Comptroller [of the Green Cloth] by the Lord Steward's appointment, to survey the land at Sayes Court, on which I had pretense, and to make his report.

6th December, 1660. I waited on my brother and sister Evelyn to Court. Now were presented to his Majesty those two rare pieces of drollery, or rather a Dutch Kitchen, painted by Dowe, so finely as hardly to be distinguished from enamel. I was also shown divers rich jewels and crystal vases; the rare head of Jo. Bellino, Titian's master; Christ in the Garden, by Hannibal Caracci; two incomparable heads, by Holbein; the Queen-Mother in a miniature, almost as big as the life; an exquisite piece of carving; two unicorn's horns, etc. This in the closet.

13th December, 1660. I presented my son, John, to the Queen-Mother, who kissed him, talked with and made extraordinary much of him.

14th December, 1660. I visited my Lady Chancellor, the Marchioness of Ormond, and Countess of Guildford, all of whom we had known abroad in exile.

18th December, 1660. I carried Mr. Spellman, a most ingenious gentleman, grandchild to the learned Sir Henry, to my Lord Mordaunt, to whom I had recommended him as secretary.

21st December, 1660. This day died the Princess of Orange, of the smallpox, which entirely altered the face and gallantry of the whole Court.

22d December, 1660. The marriage of the Chancellor's daughter being now newly owned, I went to see her, she being Sir Richard Browne's intimate acquaintance when she waited on the Princess of Orange; she was now at her father's, at Worcester House, in the Strand. We all kissed her hand, as did also my Lord Chamberlain (Manchester) and Countess of Northumberland. This was a strange change: can it succeed well?—I spent the evening at St. James's, whither the Princess Henrietta was retired during the fatal sickness of her sister, the Princess of Orange, now come over to salute the King her brother. The Princess gave my wife an extraordinary compliment and gracious acceptance, for the "Character"\* she had presented her the day before, and which was afterward printed.

25th December, 1660. Preached at the Abbey, Dr. Earle, Clerk of his Majesty's Closet, and my dear friend, now Dean of Westminster, on Luke ii. 13, 14, condoling the breach made in the public joy by the lamented death of the Princess.

30th December, 1660. I dined at Court with Mr. Crane, Clerk of the Green Cloth.

31st December, 1660. I gave God thanks for his many signal mercies to myself, church, and nation, this wonderful year.

2d January, 1661. The Queen-Mother, with the Princess Henrietta, began her journey to Portsmouth, in order to her return into France.

\* "A Character of England," reprinted in Evelyn's "Miscellaneous Writings," pp. 141-67.

5th January, 1661. I visited my Lord Chancellor Clarendon, with whom I had been well acquainted abroad.

6th January, 1661. Dr. Allestree preached at the Abbey, after which four Bishops were consecrated, Hereford, Norwich, . . . .

This night was suppressed a bloody insurrection of some FIFTH-MONARCHY ENTHUSIASTS. Some of them were examined at the Council the next day; but could say nothing to extenuate their madness and unwarrantable zeal.

I was now chosen (and nominated by his Majesty for one of the Council), by suffrage of the rest of the members, a Fellow of the Philosophic Society now meeting at Gresham College, where was an assembly of divers learned gentlemen. This being the first meeting since the King's return; but it had been begun some years before at Oxford, and was continued with interruption here in London during the Rebellion.

There was another rising of the fanatics, in which some were slain.

16th January, 1661. I went to the Philosophic Club, where was examined the Torricellian experiment. I presented my Circle of Mechanical Trades, and had recommended to me the publishing what I had written of Chalcography.

25th January, 1661. After divers years since I had seen any play, I went to see acted "The Scornful Lady," at a new theater in Lincoln's-Inn Fields.

30th January, 1661. Was the first solemn fast and day of humiliation to deplore the sins which had so long provoked God against this afflicted church and people, ordered by Parliament to be annually celebrated to expiate the guilt of the execrable murder of the late King.

This day (Oh, the stupendous and inscrutable judgments of God!) were the carcasses of those arch-rebels, Cromwell, Bradshawe (the judge who condemned his Majesty), and Ireton (son-in-law to the Usurper), dragged out of their superb tombs in Westminster among the Kings, to Tyburn, and hanged on the gallows there from nine in the morning till six at night, and then buried under that fatal and ignominious monument in a deep pit; thousands of people who had seen them in all their pride being

spectators. Look back at October 22, 1658,\* and be astonished! and fear God and honor the King; but meddle not with them who are given to change!

6th February, 1661. To London, to our Society, where I gave notice of the visit of the Danish Ambassador-Extraordinary, and was ordered to return him their acceptance of that honor, and to invite him the next meeting day.

10th February, 1661. Dr. Baldero preached at Ely-house, on Matthew vi. 33, of seeking early the kingdom of God; after sermon, the Bishop (Dr. Wren) gave us the blessing, very pontifically.

13th February, 1661. I conducted the Danish Ambassador to our meeting at Gresham College, where were shown him various experiments *in vacuo*, and other curiosities.

21st February, 1661. Prince Rupert first showed me how to grave in *mezzo tinto*.

26th February, 1661. I went to Lord Mordaunt's, at Parson's Green.

27th February, 1661. Ash Wednesday. Preached before the King the Bishop of London (Dr. Sheldon) on Matthew xviii. 25, concerning charity and forgiveness.

8th March, 1661. I went to my Lord Chancellor's, and delivered to him the state of my concernment at Sayes Court.

9th March, 1661. I went with that excellent person and philosopher, Sir Robert Murray, to visit Mr. Boyle at Chelsea, and saw divers effects of the colipile for weighing air.

13th March, 1661. I went to Lambeth, with Sir R. Browne's pretense to the Wardenship of Merton College, Oxford, to which, as having been about forty years before a student of that house, he was elected by the votes of every Fellow except one; but the statutes of the house being so that, unless every Fellow agree, the election devolves to the Visitor, who is the Archbishop of Canterbury (Dr. Juxon), his Grace gave his nomination to Sir T. Clayton, resident there, and the Physic Professor: for which I was not at all displeased, because, though Sir Richard missed it by much ingratitude and wrong of the Archbishop (Clayton being no Fellow), yet it would

\*The entry in the "Diary" describing the Protector's funeral.

have hindered Sir Richard from attending at Court to settle his greater concerns, and so have prejudiced me, though he was much inclined to have passed his time in a collegiate life, very unfit for him at that time, for many reasons. So I took leave of his Grace, who was formerly Lord Treasurer in the reign of Charles I.

This afternoon, Prince Rupert showed me, with his own hands, the new way of graving, called *mezzo tinto*, which afterward, by his permission, I published in my "History of Chalcography"; this set so many artists on work, that they soon arrived to the perfection it is since come to, emulating the tenderest miniatures.

Our Society now gave in my relation of the Peak of Teneriffe, in the Great Canaries, to be added to more queries concerning divers natural things reported of that island.

I returned home with my Cousin, Tuke, now going for France, as sent by his Majesty to condole the death of that great Minister and politician, Count Mazarine.

29th March, 1661. Dr. Heylin (author of the "Geography") preached at the Abbey, on Cant. v. 25, concerning friendship and charity; he was, I think, at this time quite dark, and so had been for some years.

31st March, 1661. This night, his Majesty promised to make my wife Lady of the Jewels (a very honorable charge) to the future Queen (but which he never performed).

1st April, 1661. I dined with that great mathematician and virtuoso, Monsieur Zulichem, inventor of the pendule clock, and discoverer of the phenomenon of Saturn's annulus: he was elected into our Society.

19th April, 1661. To London, and saw the bathing and rest of the ceremonies of the Knights of the Bath, preparatory to the coronation; it was in the Painted Chamber, Westminster. I might have received this honor; but declined it. The rest of the ceremony was in the chapel at Whitehall, when their swords being laid on the altar, the Bishop delivered them.

22d April, 1661. Was the splendid cavalcade of his Majesty from the Tower of London to Whitehall, when I saw him in the Banqueting House create six Earls, and as many Barons, viz:

Edward Lord Hyde, Lord Chancellor, Earl of Claren-

don; supported by the Earls of Northumberland and Sussex; the Earl of Bedford carried the cap and coronet, the Earl of Warwick, the sword, the Earl of Newport, the mantle.

Next, was Capel, created Earl of Essex.

Brudenell, . . . Cardigan;

Valentia, . . . Anglesea;

Greenvill, . . . Bath; and

Howard, Earl of Carlisle.

The Barons were: Denzille Holles; Cornwallis; Booth; Townsend; Cooper; Crew; who were led up by several Peers, with Garter and officers of arms before them; when, after obedience on their several approaches to the throne, their patents were presented by Garter King-at-Arms, which being received by the Lord Chamberlain, and delivered to his Majesty, and by him to the Secretary of State, were read, and then again delivered to his Majesty, and by him to the several Lords created; they were then robed, their coronets and collars put on by his Majesty, and they were placed in rank on both sides of the state and throne; but the Barons put off their caps and circles, and held them in their hands, the Earls keeping on their coronets, as cousins to the King.

I spent the rest of the evening in seeing the several archtriumphals built in the streets at several eminent places through which his Majesty was next day to pass, some of which, though temporary, and to stand but one year, were of good invention and architecture, with inscriptions.

23d April, 1661. Was the coronation of his Majesty Charles II. in the Abbey-Church of Westminster; at all which ceremony I was present. The King and his Nobility went to the Tower, I accompanying my Lord Viscount Mordaunt part of the way; this was on Sunday, the 22d; but indeed his Majesty went not till early this morning, and proceeded from thence to Westminster in this order:

First went the Duke of York's Horse Guards. Messengers of the Chamber. 136 Esquires to the Knights of the Bath, each of whom had two, most richly habited. The Knight Harbinger. Sergeant Porter. Sewers of the Chamber. Quarter Waiters. Six Clerks of Chancery. Clerk of the Signet. Clerk of the Privy Seal. Clerks of

the Council, of the Parliament, and of the Crown. Chaplains in ordinary having dignities, 10. King's Advocates and Remembrancer. Council at Law. Masters of the Chancery. Puisne Sergeants. King's Attorney and Solicitor. King's eldest Sergeant. Secretaries of the French and Latin tongue. Gentlemen Ushers. Daily Waiters, Sewers, Carvers, and Cupbearers in ordinary. Esquires of the body, 4. Masters of standing offices, being no Counsellors, viz, of the Tents, Revels, Ceremonies, Armory, Wardrobe, Ordnance, Requests. Chamberlain of the Exchequer. Barons of the Exchequer. Judges. Lord Chief-Baron. Lord Chief-Justice of the Common Pleas. Master of the Rolls. Lord Chief-Justice of England. Trumpets. Gentlemen of the Privy Chamber. Knights of the Bath, 68, in crimson robes, exceeding rich, and the noblest show of the whole cavalcade, his Majesty excepted. Knight Marshal. Treasurer of the Chamber. Master of the Jewels. Lords of the Privy Council. Comptroller of the Household. Treasurer of the Household. Trumpets. Sergeant Trumpet. Two Pursuivants at Arms. Barons. Two Pursuivants at Arms. Viscounts. Two Heralds. Earls. Lord Chamberlain of the Household. Two Heralds. Marquises. Dukes. Heralds Clarencieux and Norroy. Lord Chancellor. Lord High Steward of England. Two persons representing the Dukes of Normandy and Aquitaine, viz, Sir Richard Fanshawe and Sir Herbert Price, in fantastic habits of the time. Gentlemen Ushers. Garter. Lord Mayor of London. The Duke of York alone (the rest by twos). Lord High Constable of England. Lord Great Chamberlain of England. The sword borne by the Earl Marshal of England. The KING, in royal robes and equipage. Afterward, followed equerries, footmen, gentlemen pensioners. Master of the Horse, leading a horse richly caparisoned. Vice-Chamberlain. Captain of the Pensioners. Captain of the Guard. The Guard. The Horse Guard. The troop of Volunteers, with many other officers and gentlemen.

This magnificent train on horseback, as rich as embroidery, velvet, cloth of gold and silver, and jewels, could make them and their prancing horses, proceeded through the streets strewed with flowers, houses hung with rich tapestry, windows and balconies full of ladies; the London militia lining the ways, and the several com-

panies, with their banners and loud music, ranked in their orders; the fountains running wine, bells ringing, with speeches made at the several triumphal arches; at that of the Temple Bar (near which I stood) the Lord Mayor was received by the Bailiff of Westminster, who, in a scarlet robe, made a speech. Thence, with joyful acclamations, his Majesty passed to Whitehall. Bonfires at night.

The next day, being St. George's, he went by water to Westminster Abbey. When his Majesty was entered, the Dean and Prebendaries brought all the regalia, and delivered them to several noblemen to bear before the King, who met them at the west door of the church, singing an anthem, to the choir. Then, came the Peers, in their robes, and coronets in their hands, till his Majesty was placed on a throne elevated before the altar. Afterward, the Bishop of London (the Archbishop of Canterbury being sick) went to every side of the throne to present the King to the people, asking if they would have him for their King, and do him homage; at this, they shouted four times "God save King Charles II!" Then, an anthem was sung. His Majesty, attended by three Bishops, went up to the altar, and he offered a pall and a pound of gold. Afterward, he sat down in another chair during the sermon, which was preached by Dr. Morley, Bishop of Worcester.

After sermon, the King took his oath before the altar to maintain the religion, Magna Charta, and laws of the land. The hymn *Veni S. Sp.* followed, and then the Litany by two Bishops. Then the Archbishop of Canterbury, present, but much indisposed and weak, said "Lift up your hearts"; at which, the King rose up, and put off his robes and upper garments, and was in a waistcoat so opened in divers places, that the Archbishop might commodiously anoint him, first in the palms of his hands, when an anthem was sung, and a prayer read; then, his breast and between the shoulders, bending of both arms; and, lastly, on the crown of the head, with apposite hymns and prayers at each anointing; this done, the Dean closed and buttoned up the waistcoat. After which, was a coif put on, and the cobbium, sindon or dalmatic, and over this a super-tunic of cloth of gold, with buskins and sandals of the same, spurs, and the sword; a prayer being

first said over it by the Archbishop on the altar, before it was girt on by the Lord Chamberlain. Then, the armill, mantle, etc. Then, the Archbishop placed the crown imperial on the altar, prayed over it, and set it on his Majesty's head, at which all the Peers put on their coronets. Anthems, and rare music, with lutes, viols, trumpets, organs, and voices, were then heard, and the Archbishop put a ring on his Majesty's finger. The King next offered his sword on the altar, which being redeemed, was drawn, and borne before him. Then, the Archbishop delivered him the sceptre, with the dove in one hand, and, in the other, the sceptre with the globe. The King kneeling, the Archbishop pronounced the blessing. His Majesty then ascending again his royal throne, while *Te Deum* was singing, all the Peers did their homage, by every one touching his crown. The Archbishop, and the rest of the Bishops, first kissing the King; who received the Holy Sacrament, and so disrobed, yet with the crown imperial on his head, and accompanied with all the nobility in the former order, he went on foot upon blue cloth, which was spread and reached from the west door of the Abbey to Westminster stairs, when he took water in a triumphal barge to Whitehall where was extraordinary feasting.

24th April, 1661. I presented his Majesty with his "Panegyric" \* in the Privy Chamber, which he was pleased to accept most graciously; I gave copies to the Lord Chancellor, and most of the noblemen who came to me for it. I dined at the Marquis of Ormond's where was a magnificent feast, and many great persons.

1st May, 1661. I went to Hyde Park to take the air, where was his Majesty and an innumerable appearance of gallants and rich coaches, being now a time of universal festivity and joy.

2d May, 1661. I had audience of my Lord Chancellor about my title to Sayes Court.

3d May, 1661. I went to see the wonderful engine for weaving silk stockings, said to have been the invention of an Oxford scholar forty years since; and I returned by Fromantil's, the famous clockmaker, to see some pendules, Monsieur Zulichem being with us.

\* A poem which Evelyn had composed on his Majesty's Coronation; the 23d of April, 1661, being St. George's day.

This evening, I was with my Lord Brouncker, Sir Robert Murray, Sir Patrick Neill, Monsieur Zulichem, and Bull (all of them of our Society, and excellent mathematicians), to show his Majesty, who was present, Saturn's annulus, as some thought, but as Zulichem affirmed with his *baltens* (as that learned gentleman had published), very near eclipsed by the moon, near the Mons Porphyritis; also, Jupiter and satellites, through his Majesty's great telescope, drawing thirty-five feet; on which were divers discourses.

8th May, 1661. His Majesty rode in state, with his imperial crown on, and all the peers in their robes, in great pomp to the Parliament now newly chosen (the old one being dissolved); and, that evening, declared in council his intention to marry the Infanta of Portugal.

9th May, 1661. At Sir Robert Murray's, where I met Dr. Wallis, Professor of Geometry in Oxford, where was discourse of several mathematical subjects.

11th May, 1661. My wife presented to his Majesty the Madonna she had copied in miniature from P. Oliver's painting, after Raphael, which she wrought with extraordinary pains and judgment. The King was infinitely pleased with it, and caused it to be placed in his cabinet among his best paintings.

13th May, 1661. I heard and saw such exercises at the election of scholars at Westminster School to be sent to the University in Latin, Greek, Hebrew, and Arabic, in themes and extemporary verses, as wonderfully astonished me in such youths, with such readiness and wit, some of them not above twelve or thirteen years of age. Pity it is, that what they attain here so ripely, they either do not retain, or do not improve more considerably when they come to be men, though many of them do; and no less is to be blamed their odd pronouncing of Latin, so that out of England none were able to understand, or endure it. The examinants, or posers, were, Dr. Duport, Greek Professor at Cambridge; Dr. Fell, Dean of Christ Church, Oxford; Dr. Pierson; Dr. Allestree, Dean of Westminster, and any that would.

14th May, 1661. His Majesty was pleased to discourse with me concerning several particulars relating to our Society, and the planet Saturn, etc., as he sat at supper in the withdrawing-room to his bedchamber.

16th May, 1661. I dined with Mr. Garmus, the Resident from Hamburg, who continued his feast near nine whole hours, according to the custom of his country, though there was no great excess of drinking, no man being obliged to take more than he liked.

22d May, 1661. The Scotch Covenant was burnt by the common hangman in divers places in London. Oh, prodigious change!

29th May, 1661. This was the first anniversary appointed by act of Parliament to be observed as a day of general thanksgiving for the miraculous restoration of his Majesty: our vicar preaching on Psalm cxviii. 24, requiring us to be thankful and rejoice, as indeed we had cause.

4th June, 1661. Came Sir Charles Harbord, his Majesty's surveyor, to take an account of what grounds I challenged at Sayes Court.

27th June, 1661. I saw the Portugal ambassador at dinner with his Majesty in state, where was excellent music.

2d July, 1661. I went to see the New Spring-Garden, at Lambeth, a prettily contrived plantation.

19th July, 1661. We tried our Diving-Bell, or engine, in the water dock at Deptford, in which our curator continued half an hour under water; it was made of cast lead, let down with a strong cable.

3d August, 1661. Came my Lord Hatton, Comptroller of his Majesty's household to visit me.

9th August, 1661. I tried several experiments on the sensitive plant and *humilis*, which contracted with the least touch of the sun through a burning glass, though it rises and opens only when it shines on it.

I first saw the famous Queen Pine brought from Barbadoes, and presented to his Majesty; but the first that were ever seen in England were those sent to Cromwell four years since.

I dined at Mr. Palmer's in Gray's Inn, whose curiosity excelled in clocks and pendules, especially one that had innumerable motions, and played nine or ten tunes on the bells very finely, some of them set in parts: which was very harmonious. It was wound up but once in a quarter. He had also good telescopes and mathematical instruments, choice pictures, and other curiosities. Thence, we went to that famous mountebank, Jo. Punteus.

Sir Kenelm Digby presented every one of us his "Discourse of the Vegetation of Plants"; and Mr. Henshaw, his "History of Saltpeter and Gunpowder." I assisted him to procure his place of French Secretary to the King, which he purchased of Sir Henry De Vic.

I went to that famous physician, Sir Fr. Prujean, who showed me his laboratory, his workhouse for turning, and other mechanics; also many excellent pictures, especially the Magdalen of Caracci; and some incomparable *paysages* done in distemper; he played to me likewise on the *polythore*, an instrument having something of the harp, lute, and theorbo; by none known in England, nor described by any author, nor used, but by this skillful and learned Doctor.

15th August, 1661. I went to Tunbridge-Wells, my wife being there for the benefit of her health. Walking about the solitudes, I greatly admired the extravagant turnings, insinuations, and growth of certain birch trees among the rocks.

13th September, 1661. I presented my "*Fumifugium*" \* dedicated to his Majesty, who was pleased that I should publish it by his special commands, being much gratified with it.

18th September, 1661. This day was read our petition to his Majesty for his royal grant, authorizing our Society to meet as a corporation, with several privileges.

An exceedingly sickly, wet autumn.

1st October, 1661. I sailed this morning with his Majesty in one of his yachts (or pleasure boats), vessels not known among us till the Dutch East India Company presented that curious piece to the King; being very excellent sailing vessels. It was on a wager between his other new pleasure boat, built frigate-like, and one of the Duke of York's; the wager £100; the race from Greenwich to Gravesend and back. The King lost it going, the wind being contrary, but saved stakes in returning. There were divers noble persons and lords on board, his Majesty sometimes steering himself. His barge and kitchen boat attended. I brake fast this morning with the King at return in his smaller vessel, he being pleased to take me and only four more, who

\* This pamphlet having become scarce, was in 1772 reprinted in 4to, and is now incorporated in Evelyn's "Miscellaneous Writings."

were noblemen, with him; but dined in his yacht, where we all ate together with his Majesty. In this passage he was pleased to discourse to me about my book inveighing against the nuisance of the smoke of London, and proposing expedients how, by removing those particulars I mentioned, it might be reformed; commanding me to prepare a Bill against the next session of Parliament, being, as he said, resolved to have something done in it. Then he discoursed to me of the improvement of gardens and buildings, now very rare in England comparatively to other countries. He then commanded me to draw up the matter of fact happening at the bloody encounter which then had newly happened between the French and Spanish Ambassadors near the Tower, contending for precedency, at the reception of the Swedish Ambassador; giving me orders to consult Sir William Compton, Master of the Ordnance, to inform me of what he knew of it, and with his favorite, Sir Charles Berkeley, captain of the Duke's life guard, then present with his troop and three foot companies; with some other reflections and instructions, to be prepared with a declaration to take off the reports which went about of his Majesty's partiality in the affairs, and of his officers' and spectators' rudeness while the conflict lasted. So I came home that night, and went next morning to London, where from the officers of the Tower, Sir William Compton, Sir Charles Berkeley, and others who were attending at this meeting of the Ambassadors three days before, having collected what I could, I drew up a Narrative in vindication of his Majesty, and the carriage of his officers and standers-by.

On Thursday his Majesty sent one of the pages of the back stairs for me to wait on him with my papers, in his cabinet where was present only Sir Henry Bennett (Privy-Purse), when beginning to read to his Majesty what I had drawn up, by the time I had read half a page, came in Mr. Secretary Morice with a large paper, desiring to speak with his Majesty, who told him he was now very busy, and therefore ordered him to come again some other time; the Secretary replied that what he had in his hand was of extraordinary importance. So the King rose up, and, commanding me to stay, went aside to a corner of the room with the Secretary; after a while,

the Secretary being dispatched, his Majesty returning to me at the table, a letter was brought him from Madame out of France;\* this he read and then bid me proceed from where I left off. This I did till I had ended all the narrative, to his Majesty's great satisfaction; and, after I had inserted one or two more clauses, in which his Majesty instructed me, commanded that it should that night be sent to the posthouse, directed to the Lord Ambassador at Paris (the Earl of St. Alban's), and then at leisure to prepare him a copy, which he would publish. This I did, and immediately sent my papers to the Secretary of State, with his Majesty's express command of dispatching them that night for France. Before I went out of the King's closet, he called me back to show me some ivory statues, and other curiosities that I had not seen before.

3d October, 1661. Next evening, being in the withdrawing-room adjoining the bedchamber, his Majesty spying me came to me from a great crowd of noblemen standing near the fire, and asked me if I had done; and told me he feared it might be a little too sharp, on second thoughts, for he had that morning spoken with the French Ambassador, who it seems had palliated the matter, and was very tame; and therefore directed me where I should soften a period or two, before it was published (as afterward it was). This night also he spoke to me to give him a sight of what was sent, and to bring it to him in his bedchamber; which I did, and received it again from him at dinner, next day. By Saturday, having finished it with all his Majesty's notes, the King being gone abroad, I sent the papers to Sir Henry Bennett (Privy-Purse and a great favorite), and slipped home, being myself much indisposed and harassed with going about, and sitting up to write.

19th October, 1661. I went to London to visit my Lord of Bristol, having been with Sir John Denham (his Majesty's surveyor) to consult with him about the placing of his palace at Greenwich, which I would have had built between the river and the Queen's house, so as a large square cut should have let in the Thames like a bay; but Sir John was for setting it on piles at the very brink of the water, which I did not assent to; and so

\* Henrietta Maria.

came away, knowing Sir John to be a better poet than architect, though he had Mr. Webb (Inigo Jones's man) to assist him.

29th October, 1661. I saw the Lord Mayor pass in his water triumph to Westminster, being the first solemnity of this nature after twenty years.

2d November, 1661. Came Sir Henry Bennett, since Lord Arlington, to visit me, and to acquaint me that his Majesty would do me the honor to come and see my garden; but, it being then late, it was deferred.

3d November, 1661. One Mr. Breton preached his probation sermon at our parish church, and indeed made a most excellent discourse on John i. 29, of God's free grace to penitents, so that I could not but recommend him to the patron.

10th November, 1661. In the afternoon, preached at the Abbey Dr. Basire, that great traveler, or rather French Apostle, who had been planting the Church of England in divers parts of the Levant and Asia. He showed that the Church of England was, for purity of doctrine, substance, decency, and beauty, the most perfect under Heaven; that England was the very land of Goshen.

11th November, 1661. I was so idle as to go to see a play called "Love and Honor." Dined at Arundel House; and that evening discoursed with his Majesty about shipping, in which he was exceedingly skillful. •

15th November, 1661. I dined with the Duke of Ormond, who told me there were no moles in Ireland, nor any rats till of late, and that in but one county; but it was a mistake that spiders would not live there, only they were not poisonous. Also, that they frequently took salmon with dogs.

16th November, 1661. I presented my translation of "Naudæus concerning Libraries" to my Lord Chancellor; but it was miserably false printed.

17th November, 1661. Dr. Creighton, a Scot, author of the "Florentine Council," and a most eloquent man and admirable Grecian, preached on Cant. vi. 13, celebrating the return and restoration of the Church and King.

20th November, 1661. At the Royal Society, Sir William Petty proposed divers things for the improvement of shipping; a versatile keel that should be on hinges, and concerning sheathing ships with thin lead.

24th November, 1661. This night his Majesty fell into discourse with me concerning bees, etc.

26th November, 1661. I saw "Hamlet, Prince of Denmark" played; but now the old plays began to disgust this refined age, since his Majesty's being so long abroad.

28th November, 1661. I dined at Chiffinch's house-warming, in St. James's Park; he was his Majesty's closet-keeper, and had his new house full of good pictures, etc. There dined with us Russell, Popish Bishop of Cape Verd, who was sent out to negotiate his Majesty's match with the Infanta of Portugal, after the Ambassador was returned.

29th November, 1661. I dined at the Countess of Peterborough's and went that evening to Parson's Green with my Lord Mordaunt, with whom I stayed that night.

1st December, 1661. I took leave of my Lord Peterborough, going now to Tangier, which was to be delivered to the English on the match with Portugal.

3d December, 1661. By universal suffrage of our philosophic assembly, an order was made and registered that I should receive their public thanks for the honorable mention I made of them by the name of Royal Society, in my Epistle dedicatory to the Lord Chancellor, before my Translation of Naudæus. Too great an honor for a trifle.

4th December, 1661. I had much discourse with the Duke of York, concerning strange cures he affirmed of a woman who swallowed a whole ear of barley, which worked out at her side. I told him of the KNIFE SWALLOWED\* and the pins.

I took leave of the Bishop of Cape Verd, now going in the fleet to bring over our new Queen.

7th December, 1661. I dined at Arundel House, the day when the great contest in Parliament was concerning the restoring the Duke of Norfolk; however, it was carried for him. I also presented my little trifle

\*This refers to the Dutchman, *ante*, 28th August, 1641; and to an extraordinary case contained in a "Miraculous Cure of the Prussian Swallow Knife, etc., by Dan Lakin, P. C.," quarto, London, 1642, with a woodcut representing the object of the cure and the size of the knife.

of Sumptuary Laws, entitled "Tyrannus" [or "The Mode"].

14th December, 1661. I saw otter hunting with the King, and killed one.

16th December, 1661. I saw a French comedy acted at Whitehall.

20th December, 1661. The Bishop of Gloucester preached at the Abbey at the funeral of the Bishop of Hereford, brother to the Duke of Albemarle. It was a decent solemnity. There was a silver miter, with episcopal robes, borne by the herald before the hearse, which was followed by the Duke his brother, and all the bishops, with divers noblemen.

23d December, 1661. I heard an Italian play and sing to the guitar with extraordinary skill before the Duke.

1st January, 1661-62. I went to London, invited to the solemn foolery of the Prince de la Grange, at Lincoln's-Inn, where came the King, Duke, etc. It began with a grand masque, and a formal pleading before the mock Princes, Grandees, Nobles, and Knights of the Sun. He had his Lord Chancellor, Chamberlain, Treasurer, and other Royal Officers, gloriously clad and attended. It ended in a magnificent banquet. One Mr. Lort was the young spark who maintained the pageantry.

6th January, 1662. This evening, according to custom, his Majesty opened the revels of that night by throwing the dice himself in the privy chamber, where was a table set on purpose, and lost his £100. (The year before he won £1,500.) The ladies also played very deep. I came away when the Duke of Ormond had won about £1,000, and left them still at passage, cards, etc. At other tables, both there and at the groom-porter's, observing the wicked folly and monstrous excess of passion among some losers; sorry am I that such a wretched custom as play to that excess should be countenanced in a Court, which ought to be an example of virtue to the rest of the kingdom.

9th January, 1662. I saw acted "The Third Part of the Siege of Rhodes." In this acted the fair and famous comedian called Roxalana from the part she performed; and I think it was the last, she being taken to be the Earl of Oxford's Miss (as at this time they began to call lewd women). It was in recitative music.

10th January, 1662. Being called into his Majesty's closet when Mr. Cooper, the rare limner, was crayoning of the King's face and head, to make the stamps for the new milled money now contriving, I had the honor to hold the candle while it was doing, he choosing the night and candlelight for the better finding out the shadows. During this, his Majesty discoursed with me on several things relating to painting and graving.

11th January, 1662. I dined at Arundel House, where I heard excellent music performed by the ablest masters, both French and English, on theorbos, viols, organs, and voices, as an exercise against the coming of the Queen, purposely composed for her chapel. Afterward, my Lord Aubigny (her Majesty's Almoner to be) showed us his elegant lodging, and his wheel-chair for ease and motion, with divers other curiosities; especially a kind of artificial glass, or porcelain, adorned with relieves of paste, hard and beautiful. Lord Aubigny (brother to the Duke of Lennox) was a person of good sense, but wholly abandoned to ease and effeminacy.

I received of Sir Peter Bull, the Queen's attorney, a draft of an Act against the nuisance of the smoke of London, to be reformed by removing several trades which are the cause of it, and endanger the health of the King and his people. It was to have been offered to the Parliament, as his Majesty commanded.

12th January, 1662. At St. James's chapel preached, or rather harangued, the famous orator, Monsieur Morus, in French. There were present the King, Duke, French Ambassador, Lord Aubigny, Earl of Bristol, and a world of Roman Catholics, drawn thither to hear this eloquent Protestant.

15th January, 1662. There was a general fast through the whole nation, and now celebrated in London, to avert God's heavy judgments on this land. Great rain had fallen without any frost, or seasonable cold, not only in England, but in Sweden, and the most northern parts, being here near as warm as at midsummer in some years.

This solemn fast was held for the House of Commons at St. Margaret's. Dr. Reeves, Dean of Windsor, preached on Joshua vii. 12, showing how the neglect of exacting justice on offenders (by which he insinuated such of the old King's murderers as were yet relieved

and in the Tower) was a main cause of God's punishing a land. He brought in that of the Gibeonites, as well as Achan and others, concluding with an eulogy of the Parliament for their loyalty in restoring the Bishops and Clergy, and vindicating the Church from sacrilege.

16th January, 1662. Having notice of the Duke of York's intention to visit my poor habitation and garden this day, I returned, when he was pleased to do me that honor of his own accord, and to stay some time viewing such things as I had to entertain his curiosity. Afterward he caused me to dine with him at the Treasurer of the Navy's house, and to sit with him covered at the same table. There were his Highness, the Duke of Ormond, and several Lords. Then they viewed some of my grounds about a project for a receptacle for ships to be moored in, which was laid aside as a fancy of Sir Nicholas Crisp. After this, I accompanied the Duke to an East India vessel that lay at Blackwall, where we had entertainment of several curiosities. Among other spirituous drinks, as punch, etc., they gave us Canary that had been carried to and brought from the Indies, which was indeed incomparably good. I returned to London with his Highness. This night was acted before his Majesty "The Widow," a lewd play.

18th January, 1662. I came home to be private a little, not at all affecting the life and hurry of Court.

24th January, 1662. His Majesty entertained me with his intentions of building his Palace of Greenwich, and quite demolishing the old one; on which I declared my thoughts.

25th January, 1662. I dined with the Trinity Company at their house, that corporation being by charter fixed at Deptford.

3d February, 1662. I went to Chelsea, to see Sir Arthur Gorges' house.

11th February, 1662. I saw a comedy acted before the Duchess of York at the Cockpit. The King was not at it.

17th February, 1662. I went with my Lord of Bristol to see his house at Wimbledon, newly bought of the Queen-Mother, to help contrive the garden after the modern, It is a delicious place for prospect and the thickets, but the soil cold and weeping clay. Returned that evening with Sir Henry Bennett.

This night was buried in Westminster Abbey the Queen of Bohemia, after all her sorrows and afflictions being come to die in the arms of her nephew, the King; also this night and the next day fell such a storm of hail, thunder, and lightning, as never was seen the like in any man's memory, especially the tempest of wind, being southwest, which subverted, besides huge trees, many houses, innumerable chimneys (among others that of my parlor at Sayes Court), and made such havoc at land and sea, that several perished on both. Divers lamentable fires were also kindled at this time; so exceedingly was God's hand against this ungrateful and vicious nation and Court.

20th February, 1662. I returned home to repair my house, miserably shattered by the late tempest.

24th March, 1662. I returned home with my whole family, which had been most part of the winter, since October, at London, in lodgings near the Abbey of Westminster.

6th April, 1662. Being of the Vestry, in the afternoon we ordered that the communion-table should be set (as usual) altar-wise, with a decent rail in front, as before the Rebellion.

17th April, 1662. The young Marquis of Argyle, whose turbulent father was executed in Scotland, came to see my garden. He seemed a man of parts.

7th May, 1662. I waited on Prince Rupert to our Assembly where were tried several experiments in Mr. Boyle's VACUUM. A man thrusting in his arm, upon exhaustion of the air, had his flesh immediately swelled so as the blood was near bursting the veins: he drawing it out, we found it all speckled.

14th May, 1662. To London, being chosen one of the Commissioners for reforming the buildings, ways, streets, and incumbrances, and regulating the hackney coaches in the city of London, taking my oath before my Lord Chancellor, and then went to his Majesty's Surveyor's office, in Scotland Yard, about naming and establishing officers, adjourning till the 16th, when I went to view how St. Martin's Lane might be made more passable into the Strand. There were divers gentlemen of quality in this commission.

25th May, 1662. I went this evening to London, in

order to our journey to Hampton Court, to see the new Queen; who, having landed at Portsmouth, had been married to the King a week before by the Bishop of London.

30th May, 1662. The Queen arrived with a train of Portuguese ladies in their monstrous fardingales, or guard-infantes, their complexions olivader\* and sufficiently unagreeable. Her Majesty in the same habit, her fore-top long and turned aside very strangely. She was yet of the handsomest countenance of all the rest, and, though low of stature, prettily shaped, languishing and excellent eyes, her teeth wronging her mouth by sticking a little too far out; for the rest, lovely enough.

31st May, 1662. I saw the Queen at dinner; the Judges came to compliment her arrival, and, after them, the Duke of Ormond brought me to kiss her hand.

2d June, 1662. The Lord Mayor and Aldermen made their addresses to the Queen, presenting her £1,000 in gold. Now saw I her Portuguese ladies, and the Guardadamas, or mother of her maids,† and the old knight, a lock of whose hair quite covered the rest of his bald pate, bound on by a thread, very oddly. I saw the rich gondola sent to his Majesty from the State of Venice; but it was not comparable for swiftness to our common wherries, though managed by Venetians.

4th June, 1662. Went to visit the Earl of Bristol, at Wimbledon.

8th June, 1662. I saw her Majesty at supper privately in her bedchamber.

9th June, 1662. I heard the Queen's Portugal music, consisting of pipes, harps, and very ill voices.

Hampton Court is as noble and uniform a pile, and as capacious as any Gothic architecture can have made it. There is an incomparable furniture in it, especially hangings designed by Raphael, very rich with gold; also many rare pictures, especially the Cæsarean Triumphs of

\*Of a dark olive complexion. It has been noticed in other accounts that Katharine of Braganza's Portuguese Ladies of Honor, who came over with her, were uncommonly ill-favored, and disagreeable in their appearance. See Falthorne's curious print of the Queen in the costume here described.

†The Maids of Honor had a mother at least as early as the reign of Elizabeth. The office is supposed to have been abolished about the period of the Revolution of 1688.

Andrea Mantegna, formerly the Duke of Mantua's; of the tapestries, I believe the world can show nothing nobler of the kind than the stories of Abraham and Tobit. The gallery of horns is very particular for the vast beams of stags, elks, antelopes, etc. The Queen's bed was an embroidery of silver on crimson velvet, and cost £8,000, being a present made by the States of Holland when his Majesty returned, and had formerly been given by them to our King's sister, the Princess of Orange, and, being bought of her again, was now presented to the King. The great looking-glass and toilet, of beaten and massive gold, was given by the Queen-Mother. The Queen brought over with her from Portugal such Indian cabinets as had never before been seen here. The great hall is a most magnificent room. The chapel roof excellently fretted and gilt. I was also curious to visit the wardrobe and tents, and other furniture of state. The park, formerly a flat and naked piece of ground, now planted with sweet rows of lime trees; and the canal for water now near perfected; also the air-park. In the garden is a rich and noble fountain, with Sirens, statues, etc., cast in copper, by Fanelli; but no plenty of water. The cradle-work of horn beam in the garden is, for the perplexed twining of the trees, very observable. There is a parterre which they call Paradise, in which is a pretty banqueting-house set over a cave, or cellar. All these gardens might be exceedingly improved, 'as being too narrow for such a palace.

10th June, 1662. I returned to London, and presented my "History of Chalcography" (dedicated to Mr. Boyle) to our Society.\*

19 June, 1662. I went to Albury, to visit Mr. Henry Howard, soon after he had procured the Dukedom to be restored. This gentleman had now compounded a debt of £200,000, contracted by his grandfather. I was much obliged to that great virtuoso, and to this young gentleman, with whom I stayed a fortnight.

2d July, 1662. We hunted and killed a buck in the park, Mr. Howard inviting most of the gentlemen of the country near him.

3d July, 1662. My wife met me at Woodcot, whither Mr. Howard accompanied me to see my son John, who

\* See Evelyn's "Miscellaneous Writings."

had been much brought up among Mr. Howard's children at Arundel House, till, for fear of their perverting him in the Catholic religion, I was forced to take him home.

8th July, 1662. To London, to take leave of the Duke and Duchess of Ormond, going then into Ireland with an extraordinary retinue.

13th July, 1662. Spent some time with the Lord Chancellor, where I had discourse with my Lord Willoughby, Governor of Barbadoes, concerning divers particulars of that colony.

28th July, 1662. His Majesty going to sea to meet the Queen-Mother, now coming again for England, met with such ill weather as greatly endangered him. I went to Greenwich, to wait on the Queen, now landed.

30th July, 1662. To London, where was a meeting about Charitable Uses, and particularly to inquire how the city had disposed of the revenues of Gresham College, and why the salaries of the professors there were no better improved. I was on this commission, with divers Bishops and Lords of the Council; but little was the progress we could make.

31st July, 1662. I sat with the Commissioners about reforming buildings and streets of London, and we ordered the paving of the way from St James's North, which was a quagmire, and also of the Haymarket about Piquillo [Piccadilly], and agreed upon instructions to be printed and published for the better keeping the streets clean.

1st August, 1662. Mr. H. Howard, his brothers Charles, Edward, Bernard, Philip,\* now the Queen's Almoner (all brothers of the Duke of Norfolk, still in Italy), came with a great train, and dined with me; Mr. H. Howard leaving with me his eldest and youngest sons, Henry and Thomas, for three or four days, my son, John, having been sometime bred up in their father's house.

4th August, 1662. Came to see me the old Countess of Devonshire, with that excellent and worthy person, my Lord her son, from Roehampton.

5th August, 1662. To London, and next day to Hampton Court, about my purchase, and took leave of Sir R. Fanshawe, now going Ambassador to Portugal.

13th August, 1662. Our Charter being now passed

\* Since Cardinal at Rome. "Evelyn's Note."

under the broad Seal, constituting us a corporation under the name of the Royal Society for the improvement of natural knowledge by experiment, was this day read and was all that was done this afternoon, being very large.

14th August, 1662. I sat on the commission for Charitable Uses, the Lord Mayor and others of the Mercers' Company being summoned, to answer some complaints of the Professors, grounded on a clause in the will of Sir Thomas Gresham, the founder.

This afternoon, the Queen-Mother, with the Earl of St. Alban's and many great ladies and persons, was pleased to honor my poor villa with her presence, and to accept of a collation. She was exceedingly pleased, and staid till very late in the evening.

15th August, 1662. Came my Lord Chancellor (the Earl of Clarendon) and his lady, his purse and mace borne before him, to visit me. They were likewise collationed with us, and were very merry. They had all been our old acquaintance in exile, and indeed this great person had ever been my friend. His son, Lord Cornbury, was here, too.

17th August, 1662. Being the Sunday when the Common Prayer Book, reformed and ordered to be used for the future, was appointed to be read, and the solemn League and Covenant to be abjured by all the incumbents of England under penalty of losing their livings; our vicar read it this morning.

20th August, 1662. There were strong guards in the city this day, apprehending some tumults, many of the Presbyterian ministers not conforming. I dined with the Vice-Chamberlain, and then went to see the Queen-Mother, who was pleased to give me many thanks for the entertainment she received at my house, when she recounted to me many observable stories of the sagacity of some dogs she formerly had.

21st August, 1662. I was admitted and then sworn one of the Council of the Royal Society, being nominated in his Majesty's original grant to be of this Council for the regulation of the Society, and making laws and statutes conducive to its establishment and progress, for which we now set apart every Wednesday morning till they were all finished. Lord Viscount

Brouncker (that excellent mathematician) was also by his Majesty, our founder, nominated our first President. The King gave us the arms of England to be borne in a canton in our arms, and sent us a mace of silver gilt, of the same fashion and size as those carried before his Majesty, to be borne before our president on meeting days. It was brought by Sir Gilbert Talbot, master of his Majesty's jewel house.

22d August, 1662. I dined with my Lord Brouncker and Sir Robert Murray, and then went to consult about a newly modeled ship at Lambeth, the intention being to reduce that art to as certain a method as any other part of architecture.

23d August, 1662. I was spectator of the most magnificent triumph that ever floated on the Thames, considering the innumerable boats and vessels, dressed and adorned with all imaginable pomp, but, above all, the thrones, arches, pageants, and other representations, stately barges of the Lord Mayor and companies, with various inventions, music, and peals of ordnance both from the vessels and the shore, going to meet and conduct the new Queen from Hampton Court to Whitehall, at the first time of her coming to town. In my opinion, it far exceeded all the Venetian Bucentoras, etc., on the Ascension, when they go to espouse the Adriatic. His Majesty and the Queen came in an antique-shaped open vessel, covered with a state, or canopy, of cloth of gold, made in form of a cupola, supported with high Corinthian pillars, wreathed with flowers, festoons and garlands. I was in our newly built vessel, sailing among them.

29th August, 1662. The Council and Fellows of the the Royal Society went in a body to Whitehall, to acknowledge his Majesty's royal grace in granting our Charter, and vouchsafing to be himself our founder; when the President made an eloquent speech, to which his Majesty gave a gracious reply and we all kissed his hand. Next day we went in like manner with our address to my Lord Chancellor, who had much promoted our patent; he received us with extraordinary favor. In the evening I went to the Queen-Mother's Court, and had much discourse with her.

1st September, 1662. Being invited by Lord Berkeley, I went to Durdans, where dined his Majesty, the Queen,

Duke, Duchess, Prince Rupert, Prince Edward, and abundance of noblemen. I went, after dinner, to visit my brother of Woodcot, my sister having been delivered of a son a little before, but who had now been two days dead.

4th September, 1662. Commission for Charitable Uses, my Lord Mayor and Aldermen being again summoned, and the improvements of Sir Thomas Gresham's estate examined. There were present the Bishop of London, the Lord Chief Justice, and the King's attorney.

6th September, 1662. Dined with me Sir Edward Walker, Garter King-at-Arms, Mr. Slingsby, master of the Mint, and several others.

17th September, 1662. We now resolved that the Arms of the Society should be a field argent, with a canton of the arms of England; the supporters two talbots argent; crest, an eagle Or holding a shield with the like arms of England, viz, three lions. The words "*Nullius in verba*." It was presented to his Majesty for his approbation, and orders given to Garter King-at-Arms to pass the diploma of their office for it.

20th September, 1662. I presented a petition to his Majesty about my own concerns, and afterward accompanied him to Monsieur Febure his chemist (and who had formerly been my master in Paris), to see his accurate preparation for the composing Sir Walter Raleigh's rare cordial: he made a learned discourse before his Majesty in French on each ingredient.

27th September, 1662. Came to visit me Sir George Saville, grandson to the learned Sir Henry Saville, who published St. Chrysostom. Sir George was a witty gentleman, if not a little too prompt and daring.

3d October, 1662. I was invited to the College of Physicians, where Dr. Moret, a learned man and library-keeper, showed me the library, theater for anatomy, and divers natural curiosities; the statue and epigram under it of that renowned physician, Dr. Harvey, discoverer of the circulation of the blood. There I saw Dr. Gilbert, Sir William Paddy's and other pictures of men famous in their faculty.

Visited Mr. Wright, a Scotchman, who had lived long at Rome, and was esteemed a good painter. The pictures of the Judges at Guildhall are of his hand, and so are some pieces in Whitehall, as the roof in his

Majesty's old bedchamber, being Astræa, the St. Catherine, and a chimney-piece in the Queen's privy chamber; but his best, in my opinion, is Lacy, the famous Roscius or comedian, whom he has painted in three dresses, as a gallant, a Presbyterian minister, and a Scotch highlander in his plaid. It is in his Majesty's dining room at Windsor. He had at his house an excellent collection, especially that small piece of Correggio, Scotus of de la Marca, a design of Paulo; and, above all, those ruins of Polydore, with some good agates and medals, especially a Scipio, and a Cæsar's head of gold.

15th October, 1662. I this day delivered my "Discourse concerning Forest Trees" to the Society, upon occasion of certain queries sent to us by the Commissioners of his Majesty's Navy, being the first book that was printed by order of the Society, and by their printer, since it was a corporation.

16th October, 1662. I saw "*Volpone*" acted at Court before their Majesties.

21st October, 1662. To the Queen-Mother's Court, where her Majesty related to us divers passages of her escapes during the Rebellion and wars in England.

28th October, 1662. To Court in the evening where the Queen-Mother, the Queen-Consort, and his Majesty being advertised of some disturbance, forbore to go to the Lord Mayor's show and feast appointed next day, the new Queen not having yet seen that triumph.

29th October, 1662. Was my Lord Mayor's show, with a number of sumptuous pageants, speeches, and verses. I was standing in a house in Cheapside against the place prepared for their Majesties. The Prince and heir of Denmark was there, but not our King. There were also the maids of honor. I went to Court this evening, and had much discourse with Dr. Basiers, one of his Majesty's chaplains, the great traveler, who showed me the synographs and original subscriptions of divers eastern patriarchs and Asian churches to our confession.

4th November, 1662. I was invited to the wedding of the daughter of Sir George Carteret (The Treasurer of the Navy and King's Vice-Chamberlain), married to Sir Nicholas Slaning, Knight of the Bath, by the Bishop of London, in the Savoy chapel; after which was an extraordinary feast.

5th November, 1662. The Council of the Royal Society met to amend the Statutes, and dined together; afterward meeting at Gresham College, where was a discourse suggested by me, concerning planting his Majesty's Forest of Dean with oak, now so much exhausted of the choicest ship timber in the world.

20th November, 1662. Dined with the Comptroller, Sir Hugh Pollard; afterward saw "The Young Admiral" acted before the King.

21st November, 1662. Spent the evening at Court, Sir Kenelm Digby giving me great thanks for my "Sylva."

27th November, 1662. Went to London to see the entrance of the Russian Ambassador, whom his Majesty ordered to be received with much state, the Emperor not only having been kind to his Majesty in his distress, but banishing all commerce with our nation during the Rebellion.

First, the city companies and trained bands were all in their stations: his Majesty's army and guards in great order. His Excellency came in a very rich coach, with some of his chief attendants; many of the rest on horseback, clad in their vests, after the Eastern manner, rich furs, caps, and carrying the presents, some carrying hawks, furs, teeth, bows, etc. It was a very magnificent show.

I dined with the Master of the Mint, where was old Sir Ralph Freeman;\* passing my evening at the Queen-Mother's Court; at night, saw acted "The Committee," a ridiculous play of Sir R. Howard, where the mimic, Lacy, acted the Irish footman to admiration.

30th October, 1662. St. Andrew's day. Invited by the Dean of Westminster to his consecration dinner and ceremony, on his being made Bishop of Worcester. Dr. Bolton preached in the Abbey Church; then followed the consecration by the Bishops of London, Chichester, Winchester, Salisbury, etc. After this, was one of the most plentiful and magnificent dinners that in my life I ever saw; it cost near £600 as I was informed. Here were the judges, nobility, clergy, and gentlemen innumerable, this Bishop being universally beloved for his sweet and gentle disposition. He was author of those Characters which go

\* Of Betchworth, in Surrey.

under the name of Blount. He translated his late Majesty's "Icon" into Latin, was Clerk of his Closet, Chaplain, Dean of Westminster, and yet a most humble, meek, and cheerful man, an excellent scholar, and rare preacher. I had the honor to be loved by him. He married me at Paris, during his Majesty's and the Church's exile. When I took leave of him, he brought me to the cloisters in his episcopal habit. I then went to prayers at Whitehall, where I passed that evening.

1st December, 1662. Having seen the strange and wonderful dexterity of the sliders on the new canal in St James's Park, performed before their Majesties by divers gentlemen and others with skates, after the manner of the Hollanders, with what swiftness they pass, how suddenly they stop in full career upon the ice; I went home by water, but not without exceeding difficulty, the Thames being frozen, great flakes of ice encompassing our boat.

17th December, 1662. I saw acted before the King "The Law against Lovers."\*

21st December, 1662. One of his Majesty's chaplains preached; after which, instead of the ancient, grave, and solemn wind music accompanying the organ, was introduced a concert of twenty-four violins between every pause, after the French fantastical light way, better suiting a tavern, or playhouse, than a church. This was the first time of change, and now we no more heard the cornet which gave life to the organ; that instrument quite left off in which the English were so skillful. I dined at Mr. Povey's, where I talked with Cromer, a great musician.

23d December, 1662. I went with Sir George Tuke, to hear the comedians con and repeat his new comedy, "The Adventures of Five Hours," a play whose plot was taken out of the famous Spanish poet, Calderon.

27th December, 1662. I visited Sir Theophilus Bidulph.

29th December, 1662. Saw the audience of the Muscovy Ambassador, which was with extraordinary state, his retinue being numerous, all clad in vests of several colors, with buskins, after the Eastern manner! their caps of fur; tunics, richly embroidered with gold and pearls,

\* By Sir William Davenant, a hotch-potch out of "Measure for Measure" and "Much Ado about Nothing."

made a glorious show. The King being seated under a canopy in the Banqueting House, the Secretary of the Embassy went before the Ambassador in a grave march, holding up his master's letters of credence in a crimson tuffeta scarf before his forehead. The Ambassador then delivered it with a profound reverence to the King, who gave it to our Secretary of State: it was written in a long and lofty style. Then came in the presents, borne by 165 of his retinue, consisting of mantles and other large pieces lined with sable, black fox, and ermine; Persian carpets, the ground cloth of gold and velvet; hawks, such as they said never came the like; horses said to be Persian; bows and arrows, etc. These borne by so long a train rendered it very extraordinary. Wind music played all the while in the galleries above. This finished, the Ambassador was conveyed by the master of the ceremonies to York House, where he was treated with a banquet, which cost £200, as I was assured.

7th January, 1663. At night I saw the ball, in which his Majesty danced with several great ladies.

8th January, 1663. I went to see my kinsman, Sir George Tuke's, comedy acted at the Duke's theater, which took so universally, that it was acted for some weeks every day, and it was believed it would be worth to the comedians £400 or £500. The plot was incomparable; but the language stiff and formal.

10th January, 1663. I saw a ball again at Court, danced by the King, the Duke, and ladies, in great pomp.

21st January, 1663. Dined at Mr. Treasurer's, of the Household, Sir Charles Berkeley's, where were the Earl of Oxford, Lord Bellasis, Lord Gerard, Sir Andrew Scrope, Sir William Coventry, Dr. Fraser, Mr. Windham, and others.

5th February, 1663. I saw "The Wild Gallant," a comedy;\* and was at the great ball at Court, where his Majesty, the Queen, etc., danced.

6th February, 1663. Dined at my Lord Mayor's, Sir John Robinson, Lieutenant of the Tower.

15th February, 1663. This night some villains broke into my house and study below, and robbed me to the

\* By Dryden. It was unsuccessful on the first representation, but was subsequently altered to the form in which it now appears.

value of £60 in plate, money and goods:—this being the third time I have been thus plundered.

26th March, 1663. I sat at the Commission of Sewers, where was a great case pleaded by his Majesty's counsel; he having built a wall over a water course, denied the jurisdiction of the Court. The verdict went for the plaintiff.\*

30th April, 1663. Came his Majesty to honor my poor villa with his presence, viewing the gardens, and even every room of the house, and was pleased to take a small refreshment. There were with him the Duke of Richmond, Earl of St. Alban's, Lord Lauderdale, and several persons of quality.

14th May, 1663. Dined with my Lord Mordaunt, and thence went to Barnes, to visit my excellent and ingenious friend, Abraham Cowley.

17th May, 1663. I saluted the old Bishop of Durham, Dr. Cosin, to whom I had been kind, and assisted in his exile; but which he little remembered in his greatness.

29th May, 1663. Dr. Creighton preached his extravagant sermon at St. Margaret's, before the House of Commons.

30th May, 1663. This morning was passed my lease of Sayes Court from the Crown, for the finishing of which I had been obliged to make such frequent journeys to London. I returned this evening, having seen the Russian Ambassador take leave of their Majesties with great solemnity.

2d July, 1663. I saw the great Masque at Court, and lay that night at Arundel House.

4th July, 1663. I saw his Majesty's Guards, being of horse and foot 4,000, led by the General, the Duke of Albemarle, in extraordinary equipage and gallantry, consisting of gentlemen of quality and veteran soldiers, excellently clad, mounted, and ordered, drawn up in battalia before their Majesties in Hyde Park, where the old Earl of Cleveland trailed a pike, and led the right-hand file in a foot company, commanded by the Lord Wentworth, his son; a worthy spectacle and example, being both of them old and valiant soldiers. This was to show the French Ambassador, Monsieur Comminges; there being a great assembly of coaches, etc., in the park.

\*That is against the King.

7th July, 1663. Dined at the Comptroller's; after dinner we met at the Commission about the streets, and to regulate hackney coaches, also to make up our accounts to pass the Exchequer.

16th July, 1663. A most extraordinary wet and cold season.

Sir George Carteret, Treasurer of the Navy, had now married his daughter, Caroline, to Sir Thomas Scott, of Scott's Hall, in Kent. This gentleman was thought to be the son of Prince Rupert.

2d August, 1663. This evening I accompanied Mr. Treasurer and Vice-Chamberlain Carteret to his lately married son-in-law's, Sir Thomas Scott, to Scott's Hall. We took barge as far as Gravesend, and thence by post to Rochester, whence in coach and six horses to Scott's Hall; a right noble seat, uniformly built, with a handsome gallery. It stands in a park well stored, the land fat and good. We were exceedingly feasted by the young knight, and in his pretty chapel heard an excellent sermon by his chaplain. In the afternoon, preached the learned Sir Norton Knatchbull (who has a noble seat hard by, and a plantation of stately fir trees). In the churchyard of the parish church I measured an overgrown yew tree, that was eighteen of my paces in compass, out of some branches of which, torn off by the winds, were sawed divers goodly planks.

10th August, 1663. We returned by Sir Norton's, whose house is likewise in a park. This gentleman is a worthy person, and learned critic, especially in Greek and Hebrew. Passing by Chatham, we saw his Majesty's Royal Navy, and dined at Commissioner Pett's,\* master-builder there, who showed me his study and models, with other curiosities belonging to his art. He is esteemed for the most skillful shipbuilder in the world. He hath a pretty garden and banqueting house, pots, statues, cypresses, resembling some villas about Rome. After a great feast

\* A monument to him in Deptford Church bears a most pompous inscription: "*Qui fuit patriæ decus, patriæ suæ magnum munimentum;*" to the effect that he had not only restored our naval affairs, but he invented that excellent and new ornament of the Navy which we call Frigate, formidable to our enemies, to us most useful and safe: he was to be esteemed, indeed, by this invention, the Noah of his age, which, like another Ark, had snatched from shipwreck our rights and our dominion of the seas.

we rode post to Gravesend, and, sending the coach to London, came by barge home that night.

18th August, 1663. To London, to see my Lord Chancellor, where I had discourse with my Lord Archbishop of Canterbury and the Bishop of Winchester, who enjoined me to write to Dr. Pierce, President of Magdalen College, Oxford, about a letter sent him by Dr. Goffe, a Romish Oratorian, concerning an answer to Dean Cressy's late book.

20th August, 1663. I dined at the Comptroller's [of the Household] with the Earl of Oxford and Mr. Ashburnham; it was said it should be the last of the public diets, or tables, at Court, it being determined to put down the old hospitality, at which was great murmuring, considering his Majesty's vast revenue and the plenty of the nation. Hence, I went to sit in a Committee, to consider about the regulation of the Mint at the Tower; in which some small progress was made.

27th August, 1663. Dined at Sir Philip Warwick's, Secretary to my Lord Treasurer, who showed me the accounts and other private matters relating to the revenue. Thence, to the Commissioners of the Mint, particularly about coinage, and bringing his Majesty's rate from fifteen to ten shillings for every pound weight of gold.

31st August, 1663. I was invited to the translation of Dr. Sheldon, Bishop of London, from that see to Canterbury, the ceremony performed at Lambeth. First, went his Grace's mace bearer, steward, treasurer, comptroller, all in their gowns, and with white staves; next, the bishops in their habits, eight in number; Dr. Sweate, Dean of the Arches, Dr. Exton, Judge of the Admiralty, Sir William Merick, Judge of the Prerogative Court, with divers advocates in scarlet. After divine service in the chapel, performed with music extraordinary, Dr. French and Dr. Stradling (his Grace's chaplains) said prayers. The Archbishop in a private room looking into the chapel, the bishops, who were commissioners, went up to a table placed before the altar, and sat round it in chairs. Then Dr. Chaworth presented the commission under the broad seal to the Bishop of Winchester, and it was read by Dr. Sweate. After which, the Vicar-General went to the vestry, and brought his Grace into the chapel, his other officers marching before. He being presented to the Commis-

sioners, was seated in a great armchair at one end of the table, when the definitive sentence was read by the Bishop of Winchester, and subscribed by all the bishops, and proclamation was three times made at the chapel door, which was then set open for any to enter, and give their exceptions; if any they had. This done, we all went to dinner in the great hall to a mighty feast. There were present all the nobility in town, the Lord Mayor of London, Sheriffs, Duke of Albemarle, etc. My Lord Archbishop did in particular most civilly welcome me. So going to visit my Lady Needham, who lived at Lambeth, I went over to London.

10th September, 1663. I dined with Mr. Treasurer of the Navy, where, sitting by Mr. Secretary Morice, we had much discourse about books and authors, he being a learned man, and had a good collection.

24th October, 1663. Mr. Edward Phillips came to be my son's preceptor: this gentleman was nephew to Milton, who wrote against Salmasius's "*Defensio*"; but was not at all infected with his principles, though brought up by him.

5th November, 1663. Dr. South, my Lord Chancellor's chaplain, preached at Westminster Abbey an excellent discourse concerning obedience to magistrates, against the pontificians and sectaries. I afterward dined at Sir Philip Warwick's, where was much company.

6th November, 1663. To Court, to get Sir John Evelyn, of Godstone, off from being Sheriff of Surrey.

30th November, 1663. Was the first anniversary of our Society for the choice of new officers, according to the tenor of our patent and institution. It being St. Andrew's day, who was our patron, each fellow wore a St. Andrew's cross of ribbon on the crown of his hat. After the election we dined together, his Majesty sending us venison.

16th December, 1663. To our Society, where Mr. P. Balle, our treasurer at the late election, presented the Society with an iron chest, having three locks, and in it £100 as a gift.

18th December, 1663. Dined with the gentlemen of his Majesty's bedchamber at Whitehall.

2d January, 1663-64. To Barn Elms, to see Abraham Cowley after his sickness; and returned that evening to London.

4th February, 1664. Dined at Sir Philip Warwick's; thence, to Court, where I had discourse with the King about an invention of glass-grenades, and several other subjects.

5th February, 1664. I saw "The Indian Queen" acted, a tragedy well written,\* so beautiful with rich scenes as the like had never been seen here, or haply (except rarely) elsewhere on a mercenary theater.

16th February, 1664. I presented my "Sylva" to the Society; and next day to his Majesty, to whom it was dedicated; also to the Lord Treasurer and the Lord Chancellor.

24th February, 1664. My Lord George Berkeley, of Durdans, and Sir Samuel Tuke came to visit me. We went on board Sir William Petty's double-bottomed vessel, and so to London.

26th February, 1664. Dined with my Lord Chancellor; and thence to Court, where I had great thanks for my "Sylva," and long discourse with the King of divers particulars.

2d March, 1664. Went to London to distribute some of my books among friends.

4th March, 1664. Came to dine with me the Earl of Lauderdale, his Majesty's great favorite, and Secretary of Scotland; the Earl of Teviot; my Lord Viscount Brouncker, President of the Royal Society; Dr. Wilkins, Dean of Ripon; Sir Robert Murray, and Mr. Hooke, Curator to the Society.

This spring I planted the Home field and West field about Sayes Court with elms, being the same year that the elms were planted by his Majesty in Greenwich Park.

9th March, 1664. I went to the Tower, to sit in commission about regulating the Mint; and now it was that the fine new-milled coin, both of white money and guineas, was established.

26th March, 1664. It pleased God to take away my son, Richard, now a month old, yet without any sickness of danger perceivably, being to all appearance a most likely child; we suspected much the nurse had overlain him; to our extreme sorrow, being now again reduced to one: but God's will be done.

\*By Sir Robert Howard and Dryden.

29th March, 1664. After evening prayers, was my child buried near the rest of his brothers—my very dear children.

27th April, 1664. Saw a facetious comedy, called "Love in a Tub"; and supped at Mr. Secretary Bennett's.

3d May, 1664. Came the Earl of Kent, my kinsman, and his Lady, to visit us.

5th May, 1664. Went with some company a journey of pleasure on the water, in a barge, with music, and at Mortlake had a great banquet, returning late. The occasion was, Sir Robert Carr now courting Mrs. Bennett, sister to the Secretary of State.

6th May, 1664. Went to see Mr. Wright the painter's collection of rare shells, etc.

8th June, 1664. To our Society, to which his Majesty had sent that wonderful horn of the fish which struck a dangerous hole in the keel of a ship in the India sea, which, being broken off with the violence of the fish, and left in the timber, preserved it from foundering.

9th June, 1664. Sir Samuel Tuke\* being this morning married to a lady, kinswoman to my Lord Arundel of Wardour, by the Queen's Lord Almoner, L. Aubigny in St. James's chapel, solemnized his wedding night at my house with much company.

22d June, 1664. One Tomson, a Jesuit, showed me such a collection of rarities, sent from the Jesuits of Japan and China to their Order at Paris, as a present to be reserved in their repository, but brought to London by the East India ships for them, as in my life I had not seen. The chief things were, rhinoceros's horns; glorious vests, wrought and embroidered on cloth of gold, but with such lively colors, that for splendor and vividness we have nothing in Europe that approaches it; a girdle studded with agates and rubies of great value and size; knives, of so keen an edge as one could not touch them, nor was the metal of our color, but more pale and livid; fans, like those our ladies use, but much larger, and with long handles curiously carved and filled with Chinese characters; a sort of paper very broad, thin, and fine, like abortive parchment, and exquisitely polished, of an amber yellow, exceedingly glorious and pretty to look on, and seeming to be like that which my

\* A Roman Catholic.

Lord Verulam describes in his "*Nova Atlantis*"; several other sorts of paper, some written, others printed; prints of landscapes, their idols, saints, pagods, of most ugly serpentine monstrous and hideous shapes, to which they paid devotion; pictures of men and countries, rarely painted on a sort of gummed calico, transparent as glass; flowers, trees, beasts, birds, etc., excellently wrought in a kind of sleeve silk, very natural; divers drugs that our druggists and physicians could make nothing of, especially one which the Jesuit called *Lac Tigridis*: it looked like a fungus, but was weighty like metal, yet was a concretion, or coagulation, of some other matter; several book MSS.; a grammar of the language written in Spanish; with innumerable other rarities.

1st July, 1664. Went to see Mr. Povey's elegant house in Lincoln's-Inn Fields, where the perspective in his court, painted by Streeter, is indeed excellent, with the vases in imitation of porphyry, and fountains; the inlaying of his closet; above all, his pretty cellar and ranging of his wine bottles.

7th July, 1664. To Court, where I subscribed to Sir Arthur Slingsby's lottery, a desperate debt owing me long since in Paris.

14th July, 1664. I went to take leave of the two Mr. Howards, now going to Paris, and brought them as far as Bromley; thence to Eltham, to see Sir John Shaw's new house, now building; the place is pleasant, if not too wet, but the house not well contrived; especially the roof and rooms too low pitched, and the kitchen where the cellars should be; the orangery and aviary handsome, and a very large plantation about it.

19th July, 1664. To London, to see the event of the lottery which his Majesty had permitted Sir Arthur Slingsby to set up for one day in the Banqueting House, at Whitehall; I gaining only a trifle, as well as did the King, Queen-Consort, and Queen-Mother, for near thirty lots; which was thought to be contrived very unhand-somely by the master of it, who was, in truth, a mere shark.

21st July, 1664. I dined with my Lord Treasurer at Southampton House, where his Lordship used me with singular humanity. I went in the afternoon to Chelsea, to wait on the Duke of Ormond, and returned to London.

28th July, 1664. Came to see me Monsieur Zuylichen, Secretary to the Prince of Orange, an excellent Latin poet, a rare lutinist, with Monsieur Oudart.

3d August, 1664. To London; a concert of excellent musicians, especially one Mr. Berkenshaw, that rare artist, who invented a mathematical way of composure very extraordinary, true as to the exact rules of art, but without much harmony.

8th August, 1664. Came the sad and unexpected news of the death of Lady Cotton, wife to my brother George, a most excellent lady.

9th August, 1664. Went with my brother Richard to Wotton, to visit and comfort my disconsolate brother; and on the 13th saw my friend, Mr. Charles Howard, at Dipden, near Dorking.

16th August, 1664. I went to see Sir William Ducie's house at Charlton; which he purchased of my excellent friend, Sir Henry Newton, now nobly furnished.

22d August, 1664. I went from London to Wotton, to assist at the funeral of my sister-in-law, the Lady Cotton, buried in our dormitory there, she being put up in lead. Dr. Owen made a profitable and pathetic discourse, concluding with an eulogy of that virtuous, pious, and deserving lady. It was a very solemn funeral, with about fifty mourners. I came back next day with my wife to London.

2d September, 1664. Came Constantine Huygens, Signor de Zuylichen, Sir Robert Morris, Mr. Oudart, Mr. Carew, and other friends, to spend the day with us.

5th October, 1664. To our Society. There was brought a newly-invented instrument of music, being a harpsichord with gut-strings, sounding like a concert of viols with an organ, made vocal by a wheel, and a zone of parchment that rubbed horizontally against the strings.

6th October, 1664. I heard the anniversary oration in praise of Dr. Harvey, in the Anatomy Theatre in the College of Physicians; after which I was invited by Dr. Alston, the President, to a magnificent feast.

7th October, 1664. I dined at Sir Nicholas Strood's, one of the Masters of Chancery, in Great St. Bartholomew's; passing the evening at Whitehall, with the Queen, etc.

8th October, 1664. Sir William Curtius, his Majesty's Resident in Germany, came to visit me; he was a wise

and learned gentleman, and, as he told me, scholar to Henry Alstedius, the Encyclopedist.

15th October, 1664. Dined at the Lord Chancellor's, where was the Duke of Ormond, Earl of Cork, and Bishop of Winchester. After dinner, my Lord Chancellor and his lady carried me in their coach to see their palace (for he now lived at Worcester-House in the Strand), building at the upper end of St. James's street, and to project the garden. In the evening, I presented him with my book on Architecture,\* as before I had done to his Majesty and the Queen-Mother. His lordship caused me to stay with him in his bedchamber, discoursing of several matters very late, even till he was going into his bed.

17th October, 1664. I went with my Lord Viscount Cornbury, to Cornbury, in Oxfordshire, to assist him in the planting of the park, and bear him company, with Mr. Belin and Mr. May, in a coach with six horses; dined at Uxbridge, lay at Wycombe.

18th October, 1664. At Oxford. Went through Woodstock, where we beheld the destruction of that royal seat and park by the late rebels, and arrived that evening at Cornbury, a house lately built by the Earl of Denbigh, in the middle of a sweet park, walled with a dry wall. The house is of excellent freestone, abounding in that part, (a stone that is fine, but never sweats, or casts any damp); it is of ample dimensions, has goodly cellars, the paving of the hall admirable for its close laying. We designed a handsome chapel that was yet wanting: as Mr. May had the stables, which indeed are very fair, having set out the walks in the parks and gardens. The lodge is a pretty solitude, and the ponds very convenient; the park well stored.

20th October, 1664. Hence, to see the famous wells, natural and artificial grots and fountains, called Bushell's Wells, at Enstone. This Bushell had been Secretary to my Lord Verulam. It is an extraordinary solitude. There he had two mummies; a grot where he lay in a hammock, like an Indian. Hence, we went to Dichley, an ancient seat of the Lees, now Sir Henry Lee's; it is a low ancient timber-house, with a pretty bowling-green. My Lady gave

\* «Parallel between Ancient and Modern Architecture, originally written in French, by Roland Freart, Sieur de Chambray,» and translated by Evelyn. See his «Miscellaneous Writings.»

us an extraordinary dinner. This gentleman's mother was Countess of Rochester, who was also there, and Sir Walter St. John. There were some pictures of their ancestors, not ill painted; the great-grandfather had been Knight of the Garter; there was a picture of a Pope, and our Savior's head. So we returned to Cornbury.

24th October, 1664. We dined at Sir Timothy Tyrill's at Shotover. This gentleman married the daughter and heir of Dr. James Usher, Archbishop of Armagh, that learned prelate. There is here in the grove a fountain of the coldest water I ever felt, and very clear. His plantation of oaks and other timber is very commendable. We went in the evening to Oxford, lay at Dr. Hyde's, principal of Magdalen-Hall (related to the Lord Chancellor), brother to the Lord Chief Justice and that Sir Henry Hyde, who lost his head for his loyalty. We were handsomely entertained two days. The Vice-Chancellor, who with Dr. Fell, Dean of Christ Church, the learned Dr. Barlow, Warden of Queen's, and several heads of houses, came to visit Lord Cornbury (his father being now Chancellor of the University), and next day invited us all to dinner. I went to visit Mr. Boyle (now here), whom I found with Dr. Wallis and Dr. Christopher Wren, in the tower of the schools, with an inverted tube, or telescope, observing the discus of the sun for the passing of Mercury that day before it; but the latitude was so great that nothing appeared; so we went to see the rarities in the library, where the keepers showed me my name among the benefactors. They have a cabinet of some medals, and pictures of the muscular parts of man's body. Thence, to the new theater, now building at an exceeding and royal expense by the Lord Archbishop of Canterbury [Sheldon], to keep the Acts in for the future, till now being in St. Mary's Church. The foundation had been newly laid, and the whole designed by that incomparable genius my worthy friend, Dr. Christopher Wren, who showed me the model, not disdaining my advice in some particulars. Thence, to see the picture on the wall over the altar of All Souls, being the largest piece of fresco painting (or rather in imitation of it, for it is in oil of turpentine) in England, not ill designed by the hand of one Fuller; yet I fear it will not hold long. It seems too full of nakeds for a chapel.

Thence, to New College, and the painting of Magdalen chapel, which is on blue cloth in *chiar oscuro*, by one Greenborow, being a *Cena Domini*, and a "Last Judgment" on the wall by Fuller, as in the other, but somewhat varied.

Next to Wadham, and the Physic Garden, where were two large locust trees, and as many platani (plane trees), and some rare plants under the culture of old Bobart.

26th October, 1664. We came back to Beaconsfield; next day to London, where we dined at the Lord Chancellor's, with my Lord Bellasis.

27th October, 1664. Being casually in the privy gallery at Whitehall, his Majesty gave me thanks before divers lords and noblemen for my book of "Architecture," and again for my "*Sylva*" saying they were the best designed and useful for the matter and subject, the best printed and designed (meaning the *taille-douces* of the Parallel of Architecture) that he had seen. He then caused me to follow him alone to one of the windows, and asked me if I had any paper about me unwritten, and a crayon; I presented him with both, and then laying it on the window-stool, he with his own hands designed to me the plot for the future building of Whitehall, together with the rooms of state, and other particulars. After this, he talked with me of several matters, asking my advice, in which I find his Majesty had an extraordinary talent becoming a magnificent prince.

The same day at Council, there being Commissioners to be made to take care of such sick and wounded and prisoners of war, as might be expected upon occasion of a succeeding war and action at sea, war being already declared againt the Hollanders, his Majesty was pleased to nominate me to be one, with three other gentlemen, Parliament men, viz, Sir William Doily, Knt. and Bart., Sir Thomas Clifford, and Bullein Rheymes, Esq.; with a salary of £1,200 a year among us, besides extraordinaries for our care and attention in time of station, each of us being appointed to a particular district, mine falling out to be Kent and Sussex, with power to constitute officers, physicians, chirurgeons, provost-marschals, and to dispose of half of the hospitals through England. After the Council, we kissed his Majesty's hand. At this Council I heard Mr. Solicitor Finch plead most elegantly

for the merchants trading to the Canaries, praying for a new Charter.

29th October, 1664. Was the most magnificent triumph by water and land of the Lord Mayor. I dined at Guildhall at the upper table, placed next to Sir H. Bennett, Secretary of State, opposite to my Lord Chancellor and the Duke of Buckingham, who sat between Monsieur Comminges, the French Ambassador, Lord Treasurer, the Dukes of Ormond and Albemarle, Earl of Manchester, Lord Chamberlain, and the rest of the great officers of state. My Lord Mayor came twice up to us, first drinking in the golden goblet his Majesty's health, then the French King's as a compliment to the Ambassador; we returned my Lord Mayor's health, the trumpets and drums sounding. The cheer was not to be imagined for the plenty and rarity, with an infinite number of persons at the tables in that ample hall. The feast was said to cost £1,000. I slipped away in the crowd, and came home late.

31st October, 1664. I was this day 44 years of age; for which I returned thanks to Almighty God, begging his merciful protection for the year to come.

2d November, 1664. Her Majesty, the Queen-Mother, came across the gallery in Whitehall to give me thanks for my book of "Architecture," which I had presented to her, with a compliment that I did by no means deserve.

16th November, 1664. We chose our treasurer, clerks, and messengers, and appointed our seal, which I ordered should be the good Samaritan, with this motto, "*Fac similiter.*" Painters' Hall was lent us to meet in. In the great room were divers pictures, some reasonably good, that had been given to the Company by several of the wardens and masters of the Company.

23d November, 1664. Our statutes now finished, were read before a full assembly of the Royal Society.

24th November, 1664. His Majesty was pleased to tell me what the conference was with the Holland Ambassador, which, as after I found, was the heads of the speech he made at the reconvention of the Parliament, which now began.

2d December, 1664. We delivered the Privy Council's letters to the Governors of St. Thomas's Hospital, in

Southwark, that a moiety of the house should be reserved for such sick and wounded as should from time to time be sent from the fleet during the war. This being delivered at their Court, the President and several Aldermen, Governors of that Hospital, invited us to a great feast in Fishmongers' Hall.

20th December, 1664. To London, our last sitting, taking order for our personal visiting our several districts. I dined at Captain Cocke's (our treasurer), with that most ingenious gentleman, Matthew Wren, son to the Bishop of Ely, and Mr. Joseph Williamson, since Secretary of State.

22d December, 1664. I went to the launching of a new ship of two bottoms, invented by Sir William Petty, on which were various opinions; his Majesty being present, gave her the name of the "Experiment": so I returned home, where I found Sir Humphry Winch, who spent the day with me.

This year I planted the lower grove next the pond at Sayes Court. It was now exceedingly cold, and a hard, long, frosty season, and the comet was very visible.

28th December, 1664. Some of my poor neighbors dined with me, and others of my tenants, according to my annual custom.

31st December, 1664. Set my affairs in order, gave God praise for His mercies the past year, and prepared for the reception of the Holy Sacrament, which I partook of the next day, after hearing our minister on the 4th of Galatians, verses 4, 5, of the mystery of our Blessed Savior's Incarnation.
